

VectSharp

1.8.0

Generated by Doxygen 1.8.18

1 VectSharp: a light library for C# vector graphics	1
1.1 Introduction	1
1.2 Installing VectSharp	1
1.3 Usage	2
1.4 Creating new output layers	3
1.5 Compiling VectSharp from source	3
1.5.1 Windows	3
1.5.2 macOS and Linux	3
1.6 Note about VectSharp.MuPDFUtils and .NET Framework	4
2 Namespace Index	5
2.1 Packages	5
3 Hierarchical Index	7
3.1 Class Hierarchy	7
4 Class Index	9
4.1 Class List	9
5 Namespace Documentation	13
5.1 VectSharp Namespace Reference	13
5.1.1 Enumeration Type Documentation	15
5.1.1.1 LineCaps	15
5.1.1.2 LineJoins	15
5.1.1.3 PixelFormats	15
5.1.1.4 Script	16
5.1.1.5 SegmentType	16
5.1.1.6 TextAnchors	16
5.1.1.7 TextBaselines	17
5.1.1.8 UnbalancedStackActions	17
5.2 VectSharp.Canvas Namespace Reference	17
5.3 VectSharp.Markdown Namespace Reference	18
5.4 VectSharp.MarkdownCanvas Namespace Reference	18
5.5 VectSharp.MuPDFUtils Namespace Reference	18
5.6 VectSharp.PDF Namespace Reference	19
5.7 VectSharp.Raster Namespace Reference	19
5.8 VectSharp.SVG Namespace Reference	19
5.9 VectSharp.ThreeD Namespace Reference	19
6 Class Documentation	21
6.1 VectSharp.ThreeD.AmbientLightSource Class Reference	21
6.1.1 Detailed Description	22
6.1.2 Constructor & Destructor Documentation	22
6.1.2.1 AmbientLightSource()	22

6.1.3 Property Documentation	22
6.1.3.1 Intensity	22
6.2 VectSharp.ThreeD.AreaLightSource Class Reference	23
6.2.1 Detailed Description	24
6.2.2 Constructor & Destructor Documentation	24
6.2.2.1 AreaLightSource()	24
6.2.3 Property Documentation	24
6.2.3.1 Center	24
6.2.3.2 Direction	25
6.2.3.3 DistanceAttenuationExponent	25
6.2.3.4 Intensity	25
6.2.3.5 PenumbraAttenuationExponent	25
6.2.3.6 PenumbraRadius	25
6.2.3.7 Radius	26
6.2.3.8 ShadowSamplingPointCount	26
6.2.3.9 SourceDistance	26
6.3 VectSharp.Canvas.AvaloniaContextInterpreter Class Reference	26
6.3.1 Detailed Description	27
6.3.2 Member Enumeration Documentation	27
6.3.2.1 TextOptions	27
6.3.3 Member Function Documentation	27
6.3.3.1 PaintToCanvas() [1/4]	27
6.3.3.2 PaintToCanvas() [2/4]	28
6.3.3.3 PaintToCanvas() [3/4]	29
6.3.3.4 PaintToCanvas() [4/4]	29
6.4 VectSharp.TrueTypeFile.Bearings Struct Reference	30
6.4.1 Detailed Description	30
6.4.2 Member Data Documentation	30
6.4.2.1 LeftSideBearing	30
6.4.2.2 RightSideBearing	31
6.5 VectSharp.Brush Class Reference	31
6.5.1 Detailed Description	31
6.5.2 Member Function Documentation	32
6.5.2.1 MultiplyOpacity()	32
6.5.2.2 operator Brush()	32
6.6 VectSharp.Colour Struct Reference	32
6.6.1 Detailed Description	34
6.6.2 Member Function Documentation	34
6.6.2.1 FromCSSString()	34
6.6.2.2 FromHSL()	35
6.6.2.3 FromLab()	35
6.6.2.4 FromRgb() [1/3]	36

6.6.2.5 FromRgb() [2/3]	36
6.6.2.6 FromRgb() [3/3]	37
6.6.2.7 FromRgba() [1/6]	37
6.6.2.8 FromRgba() [2/6]	38
6.6.2.9 FromRgba() [3/6]	38
6.6.2.10 FromRgba() [4/6]	39
6.6.2.11 FromRgba() [5/6]	39
6.6.2.12 FromRgba() [6/6]	40
6.6.2.13 FromXYZ()	40
6.6.2.14 ToCSSString()	41
6.6.2.15 WithAlpha() [1/4]	41
6.6.2.16 WithAlpha() [2/4]	41
6.6.2.17 WithAlpha() [3/4]	42
6.6.2.18 WithAlpha() [4/4]	42
6.6.3 Member Data Documentation	43
6.6.3.1 A	43
6.6.3.2 B	43
6.6.3.3 G	43
6.6.3.4 H	43
6.6.3.5 L	44
6.6.3.6 R	44
6.6.3.7 X	44
6.7 VectSharp.ThreeD.ColourMaterial Class Reference	45
6.7.1 Detailed Description	45
6.7.2 Constructor & Destructor Documentation	45
6.7.2.1 ColourMaterial()	45
6.7.3 Property Documentation	46
6.7.3.1 Colour	46
6.8 VectSharp.Colours Class Reference	46
6.8.1 Detailed Description	52
6.8.2 Member Data Documentation	52
6.8.2.1 AliceBlue	52
6.8.2.2 AntiqueWhite	53
6.8.2.3 Aqua	53
6.8.2.4 Aquamarine	53
6.8.2.5 Azure	53
6.8.2.6 Beige	53
6.8.2.7 Bisque	54
6.8.2.8 Black	54
6.8.2.9 BlanchedAlmond	54
6.8.2.10 Blue	54
6.8.2.11 BlueViolet	54

6.8.2.12 Brown	55
6.8.2.13 BurlyWood	55
6.8.2.14 CadetBlue	55
6.8.2.15 Chartreuse	55
6.8.2.16 Chocolate	55
6.8.2.17 Coral	56
6.8.2.18 CornflowerBlue	56
6.8.2.19 Cornsilk	56
6.8.2.20 Crimson	56
6.8.2.21 Cyan	56
6.8.2.22 DarkBlue	57
6.8.2.23 DarkCyan	57
6.8.2.24 DarkGoldenRod	57
6.8.2.25 DarkGray	57
6.8.2.26 DarkGreen	57
6.8.2.27 DarkGrey	58
6.8.2.28 DarkKhaki	58
6.8.2.29 DarkMagenta	58
6.8.2.30 DarkOliveGreen	58
6.8.2.31 DarkOrange	58
6.8.2.32 DarkOrchid	59

Chapter 1

VectSharp: a light library for C# vector graphics

1.1 Introduction

VectSharp is a library to create vector graphics (including text) in C#, without too many dependencies.

It includes an abstract layer on top of which output layers can be written. Currently, there are four available output layers: **VectSharp.PDF** produces PDF documents, **VectSharp.Canvas** produces an Avalonia `↔ Controls.Canvas` object (<https://avaloniaui.net/docs/controls/canvas>) containing the rendered graphics objects, **VectSharp.Raster** produces raster images in PNG format, and **VectSharp.SVG** produces vector graphics in SVG format.

VectSharp.ThreeD adds support for 3D vector and raster graphics.

VectSharp.Markdown can be used to transform Markdown documents into **VectSharp** objects, that can then be exported e.g. as PDF or SVG files, or displayed in an Avalonia `Canvas`. **VectSharp.MarkdownCanvas** uses **VectSharp.Markdown** to render Markdown documents in Avalonia applications (an example of this is in the `MarkdownViewerDemo` project).

VectSharp is written using .NET Core, and is available for Mac, Windows and Linux. It is released under a GPLv3 license. It includes 14 standard fonts, also released under a GPL license.

Since version 2.0.0, **VectSharp.Raster** is released under an AGPLv3 license.

VectSharp.MuPDFUtils, also released under an AGPLv3 license, contains some utility functions that use `MuP↔DFCore` to make it possible to include in **VectSharp** graphics images in various formats.

1.2 Installing VectSharp

To include **VectSharp** in your project, you will need one of the output layer NuGet packages: `VectSharp.PDF`, `VectSharp.Canvas`, `VectSharp.Raster`, or `VectSharp.SVG`. You will need `VectSharp.↔ThreeD` to work with 3D graphics. You may want the `VectSharp.MuPDFUtils` package if you wish to manipulate raster images.

1.3 Usage

You can find the full documentation for the [VectSharp](#) library at the [documentation website](#). A [PDF reference manual](#) is also available.

In general, working with [VectSharp](#) involves: creating a Document, adding Pages, drawing to the Pages' Graphics objects and, finally, exporting them to a PDF document, Canvas, PNG image or SVG document.

- **Create a Document:**

```
using VectSharp;
// ...
Document doc = new Document();
```
- **Add a Page:**

```
doc.Pages.Add(new Page(1000, 1000));
```
- **Draw to the Page's Graphics object:**

```
Graphics gpr = doc.Pages.Last().Graphics;
gpr.FillRectangle(100, 100, 800, 800, Colour.FromRgb(128, 128, 128));
```
- **Save as PDF document:**

```
using VectSharp.PDF;
//...
doc.SaveAsPDF(@"Sample.pdf");
```
- **Export the graphics to a Canvas:**

```
using VectSharp.Canvas;
//...
Avalonia.Controls.Canvas can = doc.Pages.Last().PaintToCanvas();
```
- **Export the graphics to a Canvas, using a multi-layer, multi-threaded, triple-buffered renderer based on SkiaSharp (which provides the best performance if you wish e.g. to place the canvas within a [Zoom↔Border](#)):**

```
using VectSharp.Canvas;
//...
// A single page
Avalonia.Controls.Canvas can = doc.Pages.Last().PaintToSKCanvas();
// The whole document - each page will correspond to a layer
Avalonia.Controls.Canvas can = doc.PaintToSKCanvas();
```
- **Save as a PNG image:**

```
using VectSharp.Raster;
//...
doc.Pages.Last().SaveAsPNG(@"Sample.png");
```
- **Save as an SVG document:**

```
using VectSharp.SVG;
//...
doc.Pages.Last().SaveAsSVG(@"Sample.svg");
```
- **PDF and SVG documents support both internal and external links:**

```
using VectSharp;
using VectSharp.PDF;
using VectSharp.SVG;
//...
Document document = new Document();
Page page = new Page(1000, 1000);
document.Pages.Add(page);
page.Graphics.FillRectangle(100, 100, 800, 50, Colour.FromRgb(128, 128, 128), tag: "linkToGitHub");
page.Graphics.FillRectangle(100, 300, 800, 50, Colour.FromRgb(255, 0, 0), tag: "linkToBlueRectangle");
page.Graphics.FillRectangle(100, 850, 800, 50, Colour.FromRgb(0, 0, 255), tag: "blueRectangle");
Dictionary<string, string> links = new Dictionary<string, string>() { { "linkToGitHub", "https://github.com/" }, { "linkToBlueRectangle", "#blueRectangle" } };
page.SaveAsSVG(@"Links.svg", linkDestinations: links);
document.SaveAsPDF(@"Links.pdf", linkDestinations: links);
```

This code produces a document with three rectangles: the grey one at the top links to the GitHub home page, while the red one in the middle is a hyperlink to the blue one at the bottom. Links in PDF documents can refer to objects that are in a different page than the one containing the link.

The public classes and methods are [fully documented](#), and you can find a (much) more detailed code example in [MainWindow.xaml.cs](#). A detailed guide about 3D graphics in [VectSharp.ThreeD](#) is available in the [VectSharp.ThreeD](#) folder.

1.4 Creating new output layers

[VectSharp](#) can be easily extended to provide additional output layers. To do so:

1. Create a new class implementing the `IGraphicsContext` interface.
2. Provide an extension method to either the `Page` or `Document` types.
3. Somewhere in the extension method, call the `CopyToIGraphicsContext` method on the `Graphics` object of the `Pages`.
4. Opportunely save or return the rendered result.

1.5 Compiling VectSharp from source

The [VectSharp](#) source code includes an example project (*VectSharp.Demo*) presenting how [VectSharp](#) can be used to produce graphics.

To be able to compile [VectSharp](#) from source, you will need to install the latest [.NET SDK](#) for your operating system.

You can use [Microsoft Visual Studio](#) to compile the program. The following instructions will cover compiling [VectSharp](#) from the command line, instead.

First of all, you will need to download the [VectSharp](#) source code: [VectSharp.tar.gz](#) and extract it somewhere.

1.5.1 Windows

Open a command-line window in the folder where you have extracted the source code, and type:

```
BuildDemo <Target>
```

Where `<Target>` can be one of `Win-x64`, `Linux-x64` or `Mac-x64` depending on which platform you wish to generate executables for.

In the `Release` folder and in the appropriate subfolder for the target platform you selected, you will find the compiled program.

1.5.2 macOS and Linux

Open a terminal in the folder where you have extracted the source code, and type:

```
./BuildDemo.sh <Target>
```

Where `<Target>` can be one of `Win-x64`, `Linux-x64` or `Mac-x64` depending on which platform you wish to generate executables for.

In the `Release` folder and in the appropriate subfolder for the target platform you selected, you will find the compiled program.

If you receive an error about permissions being denied, try typing `chmod +x BuildDemo.sh` first.

1.6 Note about VectSharp.MuPDFUtils and .NET Framework

If you wish to use [VectSharp.MuPDFUtils](#) in a .NET Framework project, you will need to manually copy the native MuPDFWrapper library for the platform you are using to the executable directory (this is done automatically if you target .NET core).

One way to obtain the appropriate library files is:

1. Manually download the NuGet package for [MuPDFCore](#) (click on the "Download package" link on the right).
2. Rename the `.nupkg` file so that it has a `.zip` extension.
3. Extract the zip file.
4. Within the extracted folder, the library files are in the `runtime/xxx-x64/native/` folder, where `xxx` is either `linux`, `osx` or `win`, depending on the platform you are using.

Make sure you copy the appropriate file to the same folder as the executable!

Chapter 2

Namespace Index

2.1 Packages

Here are the packages with brief descriptions (if available):

VectSharp	13
VectSharp.Canvas	17
VectSharp.Markdown	18
VectSharp.MarkdownCanvas	18
VectSharp.MuPDFUtils	18
VectSharp.PDF	19
VectSharp.Raster	19
VectSharp.SVG	19
VectSharp.ThreeD	19

Chapter 3

Hierarchical Index

3.1 Class Hierarchy

This inheritance list is sorted roughly, but not completely, alphabetically:

VectSharp.Canvas.AvaloniaContextInterpreter	26
VectSharp.TrueTypeFile.Bearings	30
VectSharp.Brush	31
VectSharp.GradientBrush	102
VectSharp.LinearGradientBrush	164
VectSharp.RadialGradientBrush	222
VectSharp.SolidColourBrush	279
Canvas	
VectSharp.Canvas.SKMultiLayerRenderCanvas	250
VectSharp.Colours	46
VectSharp.Font.DetailedFontMetrics	82
VectSharp.Document	86
Exception	
VectSharp.UnbalancedStackException	299
VectSharp.Font	87
VectSharp.FontFamily	90
VectSharp.Canvas.ResourceFontFamily	242
VectSharp.Markdown.FormattedString	95
VectSharp.FormattedText	97
VectSharp.FormattedTextExtensions	101
VectSharp.GradientStop	103
VectSharp.Graphics	107
VectSharp.GraphicsPath	129
VectSharp.Markdown.HTTPUtils	142
IDisposable	
VectSharp.Canvas.SKMultiLayerRenderCanvas	250
VectSharp.Canvas.SKRenderAction	259
VectSharp.DisposableIntPtr	84
VectSharp.RasterImage	226
VectSharp.MuPDFUtils.RasterImageFile	231
VectSharp.MuPDFUtils.RasterImageStream	232
IEquatable	
VectSharp.Colour	32
VectSharp.IGraphicsContext	143

VectSharp.ThreeD.ILightSource	154
VectSharp.ThreeD.AmbientLightSource	21
VectSharp.ThreeD.AreaLightSource	23
VectSharp.ThreeD.MaskedLightSource	195
VectSharp.ThreeD.ParallelLightSource	208
VectSharp.ThreeD.PointLightSource	220
VectSharp.ThreeD.SpotlightLightSource	282
VectSharp.MuPDFUtils.ImageURIParser	157
VectSharp.ThreeD.IMaterial	158
VectSharp.ThreeD.ColourMaterial	45
VectSharp.ThreeD.PhongMaterial	215
IReadOnlyList	
VectSharp.GradientStops	105
VectSharp.ThreeD.IScene	159
VectSharp.ThreeD.Scene	243
VectSharp.ThreeD.LightIntensity	162
VectSharp.LineDash	167
VectSharp.Markdown.Margins	169
VectSharp.Markdown.MarkdownRenderer	176
VectSharp.ThreeD.ObjectFactory	199
VectSharp.Page	206
VectSharp.SVG.Parser	210
VectSharp.PDF.PDFContextInterpreter	213
VectSharp.Point	217
VectSharp.Raster.Raster	225
VectSharp.Canvas.RenderAction	234
VectSharp.Segment	245
VectSharp.Size	249
VectSharp.Canvas.SKRenderContext	270
VectSharp.Canvas.SKRenderContextInterpreter	271
VectSharp.SVG.SVGContextInterpreter	285
VectSharp.Markdown.SyntaxHighlighter	287
VectSharp.TrueTypeFile	288
VectSharp.TrueTypeFile.TrueTypePoint	298
UserControl	
VectSharp.MarkdownCanvas.MarkdownCanvasControl	171
VectSharp.TrueTypeFile.VerticalMetrics	299

Chapter 4

Class Index

4.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

VectSharp.ThreeD.AmbientLightSource	
Represents a uniform ambien light source	21
VectSharp.ThreeD.AreaLightSource	
Represents a light source emitting light from a circular area	23
VectSharp.Canvas.AvaloniaContextInterpreter	
Contains methods to render a Page to an Avalonia.Controls.Canvas	26
VectSharp.TrueTypeFile.Bearings	
Represents the left- and right-side bearings of a glyph	30
VectSharp.Brush	
Represents a brush used to fill or stroke graphics elements. This could be a solid colour, or a more complicated gradient or pattern	31
VectSharp.Colour	
Represents an RGB colour	32
VectSharp.ThreeD.ColourMaterial	
Represents a material that always has the same colour, regardless of light	45
VectSharp.Colours	
Standard colours	46
VectSharp.Font.DetailedFontMetrics	
Represents detailed information about the metrics of a text string when drawn with a certain font	82
VectSharp.DisposableIntPtr	
An IDisposable wrapper around an IntPtr that frees the allocated memory when it is disposed .	84
VectSharp.Document	
Represents a collection of pages	86
VectSharp.Font	
Represents a typeface with a specific size	87
VectSharp.FontFamily	
Represents a typeface	90
VectSharp.Markdown.FormattedString	
Represents a string with associated formatting information	95
VectSharp.FormattedText	
Represents a run of text that should be drawn with the same style	97
VectSharp.FormattedTextExtensions	
Contains extension methods for collections of FormattedText objects	101
VectSharp.GradientBrush	
Represents a brush painting with a gradient	102

VectSharp.GradientStop	Represents a colour stop in a gradient	103
VectSharp.GradientStops	Represents a read-only list of GradientStops	105
VectSharp.Graphics	Represents an abstract drawing surface	107
VectSharp.GraphicsPath	Represents a graphics path that can be filled or stroked	129
VectSharp.Markdown.HTTPUtils	Contains utilities to resolve absolute and relative URIs	142
VectSharp.IGraphicsContext	This interface should be implemented by classes intended to provide graphics output capability to a Graphics object	143
VectSharp.ThreeD.ILightSource	Represents a light source	154
VectSharp.MuPDFUtils.ImageURIParser	Provides a method to parse an image URI into a page	157
VectSharp.ThreeD.IMaterial	Represents a material used to the determine the appearance of Triangle3DElement	158
VectSharp.ThreeD.IScene	Represents a 3D scene	159
VectSharp.ThreeD.LightIntensity	Represents the intensity of a light source at a particular point	162
VectSharp.LinearGradientBrush	Represents a brush painting with a linear gradient	164
VectSharp.LineDash	Represents instructions on how to paint a dashed line	167
VectSharp.Markdown.Margins	Represents the margins of a page	169
VectSharp.MarkdownCanvas.MarkdownCanvasControl	A control to display a Markdown document in an Avalonia application	171
VectSharp.Markdown.MarkdownRenderer	Renders Markdown documents into VectSharp graphics objects	176
VectSharp.ThreeD.MaskedLightSource	Represents a point light source with a stencil in front of it	195
VectSharp.ThreeD.ObjectFactory	A static class containing methods to create complex 3D objects	199
VectSharp.Page	Represents a Graphics object with a width and height	206
VectSharp.ThreeD.ParallelLightSource	Represents a parallel light source	208
VectSharp.SVG.Parser	Contains methods to read an SVG image file	210
VectSharp.PDF.PDFContextInterpreter	Contains methods to render a Document as a PDF document	213
VectSharp.ThreeD.PhongMaterial	Represents a material that uses a Phong reflection model to determine the colour of the material based on the light sources that hit it	215
VectSharp.Point	Represents a point relative to an origin in the top-left corner	217
VectSharp.ThreeD.PointLightSource	Represents a point light source	220
VectSharp.RadialGradientBrush	Represents a brush painting with a radial gradient	222
VectSharp.Raster.Raster	Contains methods to render a page to a PNG image	225

VectSharp.RasterImage	Represents a raster image, created from raw pixel data. Consider using the derived classes included in the NuGet package "VectSharp.MuPDFUtils" if you need to load a raster image from a file or a Stream	226
VectSharp.MuPDFUtils.RasterImageFile	A RasterImage created from a file	231
VectSharp.MuPDFUtils.RasterImageStream	A RasterImage created from a stream	232
VectSharp.Canvas.RenderAction	Represents a light-weight rendering action	234
VectSharp.Canvas.ResourceFontFamily	Represents a FontFamily created from a resource stream	242
VectSharp.ThreeD.Scene	Represents a 3D scene	243
VectSharp.Segment	Represents a segment as part of a GraphicsPath	245
VectSharp.Size	Represents the size of an object	249
VectSharp.Canvas.SKMultiLayerRenderCanvas	Represents a multi-threaded, triple-buffered canvas on which the image is drawn using Skia↔ Sharp	250
VectSharp.Canvas.SKRenderAction	Represents a light-weight rendering action	259
VectSharp.Canvas.SKRenderContext	Represents a page that has been prepared for fast rendering using the SkiaSharp renderer	270
VectSharp.Canvas.SKRenderContextInterpreter	Contains methods to render a Page to an Avalonia.Controls.Canvas using the SkiaSharp renderer	271
VectSharp.SolidColourBrush	Represents a brush painting with a single solid colour	279
VectSharp.ThreeD.SpotlightLightSource	Represents a conic spotlight	282
VectSharp.SVG.SVGContextInterpreter	Contains methods to render a Page as an SVG file	285
VectSharp.Markdown.SyntaxHighlighter	Contains methods to perform syntax highlighting	287
VectSharp.TrueTypeFile	Represents a font file in TrueType format. Reference: http://stevehanov.ca/blog/?id=143 , https://developer.apple.com/fonts/TrueType-Reference-Manual/ , https://docs.microsoft.com/en-us/typography/opentype/spec/ 288	
VectSharp.TrueTypeFile.TrueTypePoint	Represents a point in a TrueType path description	298
VectSharp.UnbalancedStackException	The exception that is thrown when an unbalanced graphics state stack occurs	299
VectSharp.TrueTypeFile.VerticalMetrics	Represents the maximum height above and depth below the baseline of a glyph	299

Chapter 5

Namespace Documentation

5.1 VectSharp Namespace Reference

Classes

- class [Brush](#)
Represents a brush used to fill or stroke graphics elements. This could be a solid colour, or a more complicated gradient or pattern.
- struct [Colour](#)
Represents an RGB colour.
- class [Colours](#)
Standard colours.
- class [DisposableIntPtr](#)
An IDisposable wrapper around an IntPtr that frees the allocated memory when it is disposed.
- class [Document](#)
Represents a collection of pages.
- class [Font](#)
Represents a typeface with a specific size.
- class [FontFamily](#)
Represents a typeface.
- class [FormattedText](#)
Represents a run of text that should be drawn with the same style.
- class [FormattedTextExtensions](#)
Contains extension methods for collections of [FormattedText](#) objects.
- class [GradientBrush](#)
Represents a brush painting with a gradient.
- struct [GradientStop](#)
Represents a colour stop in a gradient.
- class [GradientStops](#)
Represents a read-only list of [GradientStops](#).
- class [Graphics](#)
Represents an abstract drawing surface.
- class [GraphicsPath](#)
Represents a graphics path that can be filled or stroked.
- interface [IGraphicsContext](#)
This interface should be implemented by classes intended to provide graphics output capability to a [Graphics](#) object.

- class [LinearGradientBrush](#)
Represents a brush painting with a linear gradient.
- struct [LineDash](#)
Represents instructions on how to paint a dashed line.
- class [Page](#)
Represents a [Graphics](#) object with a width and height.
- struct [Point](#)
Represents a point relative to an origin in the top-left corner.
- class [RadialGradientBrush](#)
Represents a brush painting with a radial gradient.
- class [RasterImage](#)
Represents a raster image, created from raw pixel data. Consider using the derived classes included in the NuGet package "VectSharp.MuPDFUtils" if you need to load a raster image from a file or a Stream.
- class [Segment](#)
Represents a segment as part of a [GraphicsPath](#).
- struct [Size](#)
Represents the size of an object.
- class [SolidColourBrush](#)
Represents a brush painting with a single solid colour.
- class [TrueTypeFile](#)
Represents a font file in TrueType format. Reference: <http://stevehanov.ca/blog/?id=143>, <https://developer.apple.com/fonts/TrueType-Reference-Manual/>, <https://docs.microsoft.com/en-us/typography/opentype/spec/>
- class [UnbalancedStackException](#)
The exception that is thrown when an unbalanced graphics state stack occurs.

Enumerations

- enum [TextBaselines](#) { [TextBaselines.Top](#), [TextBaselines.Bottom](#), [TextBaselines.Middle](#), [TextBaselines.Baseline](#) }
Represent text baselines.
- enum [TextAnchors](#) { [TextAnchors.Left](#), [TextAnchors.Center](#), [TextAnchors.Right](#) }
Represents text anchors.
- enum [LineCaps](#) { [LineCaps.Butt](#) = 0, [LineCaps.Round](#) = 1, [LineCaps.Square](#) = 2 }
Represents line caps.
- enum [LineJoins](#) { [LineJoins.Bevel](#) = 2, [LineJoins.Miter](#) = 0, [LineJoins.Round](#) = 1 }
Represents line joining options.
- enum [SegmentType](#) { [SegmentType.Move](#), [SegmentType.Line](#), [SegmentType.CubicBezier](#), [SegmentType.Arc](#), [SegmentType.Close](#) }
Types of Segment.
- enum [UnbalancedStackActions](#) { [UnbalancedStackActions.Throw](#), [UnbalancedStackActions.SilentlyFix](#), [UnbalancedStackActions.Ignore](#) }
Represents ways to deal with unbalanced graphics state stacks.
- enum [Script](#) { [Script.Normal](#), [Script.Superscript](#), [Script.Subscript](#) }
Represents the position of the text.
- enum [PixelFormat](#) { [PixelFormat.RGB](#), [PixelFormat.RGBA](#), [PixelFormat.BGR](#), [PixelFormat.BGRA](#) }
Represents the pixel format of a raster image.

5.1.1 Enumeration Type Documentation

5.1.1.1 LineCaps

enum `VectSharp.LineCaps` [strong]

Represents line caps.

Enumerator

Butt	The ends of the line are squared off at the endpoints.
Round	The ends of the lines are rounded.
Square	The ends of the lines are squared off by adding an half square box at each end.

Definition at line 70 of file Enums.cs.

5.1.1.2 LineJoins

enum `VectSharp.LineJoins` [strong]

Represents line joining options.

Enumerator

Bevel	Consecutive segments are joined by straight corners.
Miter	Consecutive segments are joined by extending their outside edges until they meet.
Round	Consecutive segments are joined by arc segments.

Definition at line 91 of file Enums.cs.

5.1.1.3 PixelFormats

enum `VectSharp.PixelFormats` [strong]

Represents the pixel format of a raster image.

Enumerator

RGB	RGB 24bpp format.
RGBA	RGBA 32bpp format.
BGR	BGR 24bpp format.
BGRA	BGR 32bpp format.

Definition at line 27 of file RasterImage.cs.

5.1.1.4 Script

```
enum VectSharp.Script [strong]
```

Represents the position of the text.

Enumerator

Normal	The text is normal text.
Superscript	The text is a superscript.
Subscript	The text is a subscript.

Definition at line 12 of file FormattedText.cs.

5.1.1.5 SegmentType

```
enum VectSharp.SegmentType [strong]
```

Types of [Segment](#).

Enumerator

Move	The segment represents a move from the current point to a new point.
Line	The segment represents a straight line from the current point to a new point.
CubicBezier	The segment represents a cubic bezier curve from the current point to a new point.
Arc	The segment represents a circular arc from the current point to a new point.
Close	The segment represents the closing segment of a figure.

Definition at line 151 of file Enums.cs.

5.1.1.6 TextAnchors

```
enum VectSharp.TextAnchors [strong]
```

Represents text anchors.

Enumerator

Left	The current coordinate will determine the position of the left side of the text string.
Center	The current coordinate will determine the position of the center of the text string.
Right	The current coordinate will determine the position of the right side of the text string.

Definition at line 49 of file Enums.cs.

5.1.1.7 TextBaselines

```
enum VectSharp.TextBaselines [strong]
```

Represent text baselines.

Enumerator

Top	The current vertical coordinate determines where the top of the text string will be placed.
Bottom	The current vertical coordinate determines where the bottom of the text string will be placed.
Middle	The current vertical coordinate determines where the middle of the text string will be placed.
Baseline	The current vertical coordinate determines where the baseline of the text string will be placed.

Definition at line 23 of file Enums.cs.

5.1.1.8 UnbalancedStackActions

```
enum VectSharp.UnbalancedStackActions [strong]
```

Represents ways to deal with unbalanced graphics state stacks.

Enumerator

Throw	If the graphics state stack is unbalanced, an exception will be thrown.
SilentlyFix	The graphics state stack will be automatically balanced by adding or removing calls to Graphics.Restore as necessary.
Ignore	No attempt will be made at correcting an unbalanced graphics state stack. This may cause issues with some consumers.

Definition at line 182 of file Enums.cs.

5.2 VectSharp.Canvas Namespace Reference

Classes

- class [AvaloniaContextInterpreter](#)
Contains methods to render a [Page](#) to an [Avalonia.Controls.Canvas](#).
- class [RenderAction](#)
Represents a light-weight rendering action.
- class [ResourceFontFamily](#)
Represents a [FontFamily](#) created from a resource stream.

- class [SKMultiLayerRenderCanvas](#)
Represents a multi-threaded, triple-buffered canvas on which the image is drawn using SkiaSharp.
- class [SKRenderAction](#)
Represents a light-weight rendering action.
- class [SKRenderContext](#)
Represents a page that has been prepared for fast rendering using the SkiaSharp renderer.
- class [SKRenderContextInterpreter](#)
Contains methods to render a [Page](#) to an [Avalonia.Controls.Canvas](#) using the SkiaSharp renderer.

5.3 VectSharp.Markdown Namespace Reference

Classes

- struct [FormattedString](#)
Represents a string with associated formatting information.
- class [HTTPUtils](#)
Contains utilities to resolve absolute and relative URIs.
- class [Margins](#)
Represents the margins of a page.
- class [MarkdownRenderer](#)
Renders [Markdown](#) documents into [VectSharp](#) graphics objects.
- class [SyntaxHighlighter](#)
Contains methods to perform syntax highlighting.

5.4 VectSharp.MarkdownCanvas Namespace Reference

Classes

- class [MarkdownCanvasControl](#)
A control to display a [Markdown](#) document in an Avalonia application.

5.5 VectSharp.MuPDFUtils Namespace Reference

Classes

- class [ImageURIParser](#)
Provides a method to parse an image URI into a page.
- class [RasterImageFile](#)
A [RasterImage](#) created from a file.
- class [RasterImageStream](#)
A [RasterImage](#) created from a stream.

5.6 VectSharp.PDF Namespace Reference

Classes

- class [PDFContextInterpreter](#)
Contains methods to render a [Document](#) as a [PDF](#) document.

5.7 VectSharp.Raster Namespace Reference

Classes

- class [Raster](#)
Contains methods to render a page to a PNG image.

5.8 VectSharp.SVG Namespace Reference

Classes

- class [Parser](#)
Contains methods to read an [SVG](#) image file.
- class [SVGContextInterpreter](#)
Contains methods to render a [Page](#) as an [SVG](#) file.

5.9 VectSharp.ThreeD Namespace Reference

Classes

- class [AmbientLightSource](#)
Represents a uniform ambient light source.
- class [AreaLightSource](#)
Represents a light source emitting light from a circular area.
- class [ColourMaterial](#)
Represents a material that always has the same colour, regardless of light.
- interface [ILightSource](#)
Represents a light source.
- interface [IMaterial](#)
Represents a material used to determine the appearance of [Triangle3DElement](#).
- interface [IScene](#)
Represents a 3D scene.
- struct [LightIntensity](#)
Represents the intensity of a light source at a particular point.
- class [MaskedLightSource](#)
Represents a point light source with a stencil in front of it.
- class [ObjectFactory](#)
A static class containing methods to create complex 3D objects.

- class [ParallelLightSource](#)
Represents a parallel light source.
- class [PhongMaterial](#)
Represents a material that uses a Phong reflection model to determine the colour of the material based on the light sources that hit it.
- class [PointLightSource](#)
Represents a point light source.
- class [Scene](#)
Represents a 3D scene.
- class [SpotlightLightSource](#)
Represents a conic spotlight.

Chapter 6

Class Documentation

6.1 VectSharp.ThreeD.AmbientLightSource Class Reference

Represents a uniform ambien light source.

Inheritance diagram for VectSharp.ThreeD.AmbientLightSource:

Public Member Functions

- [AmbientLightSource](#) (double intensity)
Creates a new [AmbientLightSource](#) instance.
- [LightIntensity GetLightAt](#) (Point3D point)
Computes the light intensity at the specified point, without taking into account any obstructions.
- double [GetObstruction](#) (Point3D point, IEnumerable< Triangle3DElement > shadowingTriangles)
Determines the amount of obstruction of the light that results at point due to the specified shadowingTriangles .

Public Attributes

- bool [CastsShadow](#) => false

Properties

- double [Intensity](#) [get, set]
The intensity of the light.

6.1.1 Detailed Description

Represents a uniform ambien light source.

Definition at line 74 of file Lights.cs.

6.1.2 Constructor & Destructor Documentation

6.1.2.1 AmbientLightSource()

```
VectSharp.ThreeD.AmbientLightSource.AmbientLightSource (  
    double intensity )
```

Creates a new [AmbientLightSource](#) instance.

Parameters

<i>intensity</i>	The intensity of the light.
------------------	-----------------------------

Definition at line 88 of file Lights.cs.

6.1.3 Property Documentation

6.1.3.1 Intensity

```
double VectSharp.ThreeD.AmbientLightSource.Intensity [get], [set]
```

The intensity of the light.

Definition at line 79 of file Lights.cs.

The documentation for this class was generated from the following file:

- VectSharp.ThreeD/Lights.cs

6.2 VectSharp.ThreeD.AreaLightSource Class Reference

Represents a light source emitting light from a circular area.

Inheritance diagram for VectSharp.ThreeD.AreaLightSource:

Public Member Functions

- [AreaLightSource](#) (double intensity, Point3D center, double radius, double penumbraRadius, NormalizedVector3D direction, double sourceDistance, int shadowSamplingPointCount)
Creates a new [AreaLightSource](#) instance.
- [LightIntensity](#) [GetLightAt](#) (Point3D point)
Computes the light intensity at the specified point, without taking into account any obstructions.
- double [GetObstruction](#) (Point3D point, IEnumerable< Triangle3DElement > shadowingTriangles)
Determines the amount of obstruction of the light that results at point due to the specified shadowingTriangles .

Properties

- bool [CastsShadow](#) = true [get, set]
- Point3D [Center](#) [get]
The centre of the light-emitting area.
- NormalizedVector3D [Direction](#) [get]
The direction of the light's main axis, i.e. the normal to the plane containing the light-emitting area.
- double [Radius](#) [get]
The radius of the light emitting area.
- double [PenumbraRadius](#) [get]
The radius of the penumbra area.
- double [Intensity](#) [get, set]
The base intensity of the light.
- double [SourceDistance](#) [get]
The distance between the focal point of the light and the light's [Center](#).
- double [DistanceAttenuationExponent](#) = 2 [get, set]
An exponent determining how fast the light attenuates with increasing distance. Set to 0 to disable distance attenuation.
- double [PenumbraAttenuationExponent](#) = 1 [get, set]
An exponent determining how fast the light attenuates between the light-emitting area radius and the penumbra radius.
- int [ShadowSamplingPointCount](#) [get]
The number of points to use when determining the amount of light that is obstructed at a certain point.

6.2.1 Detailed Description

Represents a light source emitting light from a circular area.

Definition at line 562 of file Lights.cs.

6.2.2 Constructor & Destructor Documentation

6.2.2.1 AreaLightSource()

```
VectSharp.ThreeD.AreaLightSource.AreaLightSource (
    double intensity,
    Point3D center,
    double radius,
    double penumbraRadius,
    NormalizedVector3D direction,
    double sourceDistance,
    int shadowSamplingPointCount )
```

Creates a new [AreaLightSource](#) instance.

Parameters

<i>intensity</i>	The base intensity of the light.
<i>center</i>	The centre of the light-emitting area.
<i>radius</i>	The radius of the light-emitting area.
<i>penumbraRadius</i>	The radius of the penumbra area.
<i>direction</i>	The direction of the light.
<i>sourceDistance</i>	The distance between the focal point of the light and the light's center.
<i>shadowSamplingPointCount</i>	The number of points to use when determining the amount of light that is obstructed at a certain point.

Definition at line 626 of file Lights.cs.

6.2.3 Property Documentation

6.2.3.1 Center

```
Point3D VectSharp.ThreeD.AreaLightSource.Center [get]
```

The centre of the light-emitting area.

Definition at line 570 of file Lights.cs.

6.2.3.2 Direction

```
NormalizedVector3D VectSharp.ThreeD.AreaLightSource.Direction [get]
```

The direction of the light's main axis, i.e. the normal to the plane containing the light-emitting area.

Definition at line 577 of file Lights.cs.

6.2.3.3 DistanceAttenuationExponent

```
double VectSharp.ThreeD.AreaLightSource.DistanceAttenuationExponent = 2 [get], [set]
```

An exponent determining how fast the light attenuates with increasing distance. Set to 0 to disable distance attenuation.

Definition at line 602 of file Lights.cs.

6.2.3.4 Intensity

```
double VectSharp.ThreeD.AreaLightSource.Intensity [get], [set]
```

The base intensity of the light.

Definition at line 592 of file Lights.cs.

6.2.3.5 PenumbraAttenuationExponent

```
double VectSharp.ThreeD.AreaLightSource.PenumbraAttenuationExponent = 1 [get], [set]
```

An exponent determining how fast the light attenuates between the light-emitting area radius and the penumbra radius.

Definition at line 607 of file Lights.cs.

6.2.3.6 PenumbraRadius

```
double VectSharp.ThreeD.AreaLightSource.PenumbraRadius [get]
```

The radius of the penumbra area.

Definition at line 587 of file Lights.cs.

6.2.3.7 Radius

```
double VectSharp.ThreeD.AreaLightSource.Radius [get]
```

The radius of the light emitting area.

Definition at line 582 of file Lights.cs.

6.2.3.8 ShadowSamplingPointCount

```
int VectSharp.ThreeD.AreaLightSource.ShadowSamplingPointCount [get]
```

The number of points to use when determining the amount of light that is obstructed at a certain point.

Definition at line 612 of file Lights.cs.

6.2.3.9 SourceDistance

```
double VectSharp.ThreeD.AreaLightSource.SourceDistance [get]
```

The distance between the focal point of the light and the light's [Center](#).

Definition at line 597 of file Lights.cs.

The documentation for this class was generated from the following file:

- VectSharp.ThreeD/Lights.cs

6.3 VectSharp.Canvas.AvaloniaContextInterpreter Class Reference

Contains methods to render a [Page](#) to an Avalonia.Controls.Canvas.

Public Types

- enum [TextOptions](#) { [TextOptions.AlwaysConvert](#), [TextOptions.ConvertIfNecessary](#), [TextOptions.NeverConvert](#) }

Defines whether text items should be converted into paths when drawing.

Static Public Member Functions

- static Avalonia.Controls.Canvas [PaintToCanvas](#) (this [Page](#) page, [TextOptions](#) textOption=[TextOptions.ConvertIfNecessary](#))
Render a [Page](#) to an Avalonia.Controls.Canvas.
- static Avalonia.Controls.Canvas [PaintToCanvas](#) (this [Page](#) page, bool graphicsAsControls, [TextOptions](#) text↔Option=[TextOptions.ConvertIfNecessary](#))
Render a [Page](#) to an Avalonia.Controls.Canvas.
- static Avalonia.Controls.Canvas [PaintToCanvas](#) (this [Page](#) page, bool graphicsAsControls, Dictionary< string, Delegate > taggedActions, bool removeTaggedActionsAfterExecution=true, [TextOptions](#) text↔Option=[TextOptions.ConvertIfNecessary](#))
Render a [Page](#) to an Avalonia.Controls.Canvas.
- static Avalonia.Controls.Canvas [PaintToCanvas](#) (this [Page](#) page, Dictionary< string, Delegate > tagged↔Actions, bool removeTaggedActionsAfterExecution=true, [TextOptions](#) textOption=[TextOptions.ConvertIfNecessary](#))
Render a [Page](#) to an Avalonia.Controls.Canvas.

6.3.1 Detailed Description

Contains methods to render a [Page](#) to an Avalonia.Controls.Canvas.

Definition at line 2184 of file AvaloniaContext.cs.

6.3.2 Member Enumeration Documentation

6.3.2.1 TextOptions

```
enum VectSharp.Canvas.AvaloniaContextInterpreter.TextOptions [strong]
```

Defines whether text items should be converted into paths when drawing.

Enumerator

AlwaysConvert	Converts all text items into paths.
ConvertIfNecessary	Converts all text items into paths, with the exception of those that use a standard font.
NeverConvert	Does not convert any text items into paths.

Definition at line 2189 of file AvaloniaContext.cs.

6.3.3 Member Function Documentation

6.3.3.1 PaintToCanvas() [1/4]

```
static Avalonia.Controls.Canvas VectSharp.Canvas.AvaloniaContextInterpreter.PaintToCanvas (
    this Page page,
```

```

bool graphicsAsControls,
Dictionary< string, Delegate > taggedActions,
bool removeTaggedActionsAfterExecution = true,
TextOptions textOption = TextOptions.ConvertIfNecessary ) [static]

```

Render a [Page](#) to an Avalonia.Controls.Canvas.

Parameters

<i>page</i>	The Page to render.
<i>graphicsAsControls</i>	If this is true, each graphics object (e.g. paths, text...) is rendered as a separate Avalonia.Controls.Control. Otherwise, they are directly rendered onto the drawing context (which is faster, but does not allow interactivity).
<i>taggedActions</i>	A Dictionary<String, Delegate> containing the Actions that will be performed on items with the corresponding tag. If <i>graphicsAsControls</i> is true, the delegates should be voids that accept one parameter of type TextBlock or Path (depending on the tagged item), otherwise, they should accept one parameter of type RenderAction and return an IEnumerable<RenderAction> of the actions that will actually be performed.
<i>removeTaggedActionsAfterExecution</i>	Whether the Actions should be removed from <i>taggedActions</i> after their execution. Set to false if the same Action should be performed on multiple items with the same tag.
<i>textOption</i>	Defines whether text items should be converted into paths when drawing.

Returns

An Avalonia.Controls.Canvas containing the rendered graphics objects.

Definition at line 2252 of file AvaloniaContext.cs.

6.3.3.2 PaintToCanvas() [2/4]

```

static Avalonia.Controls.Canvas VectSharp.Canvas.AvaloniaContextInterpreter.PaintToCanvas (
    this Page page,
    bool graphicsAsControls,
    TextOptions textOption = TextOptions.ConvertIfNecessary ) [static]

```

Render a [Page](#) to an Avalonia.Controls.Canvas.

Parameters

<i>page</i>	The Page to render.
<i>graphicsAsControls</i>	If this is true, each graphics object (e.g. paths, text...) is rendered as a separate Avalonia.Controls.Control. Otherwise, they are directly rendered onto the drawing context (which is faster, but does not allow interactivity).
<i>textOption</i>	Defines whether text items should be converted into paths when drawing.

Returns

An Avalonia.Controls.Canvas containing the rendered graphics objects.

Definition at line 2228 of file AvaloniaContext.cs.

6.3.3.3 PaintToCanvas() [3/4]

```
static Avalonia.Controls.Canvas VectSharp.Canvas.AvaloniaContextInterpreter.PaintToCanvas (
    this Page page,
    Dictionary< string, Delegate > taggedActions,
    bool removeTaggedActionsAfterExecution = true,
    TextOptions textOption = TextOptions.ConvertIfNecessary ) [static]
```

Render a [Page](#) to an Avalonia.Controls.Canvas.

Parameters

<i>page</i>	The Page to render.
<i>taggedActions</i>	A Dictionary<String, Delegate> containing the Actions that will be performed on items with the corresponding tag. The delegates should accept one parameter of type TextBlock or Path (depending on the tagged item).
<i>removeTaggedActionsAfterExecution</i>	Whether the Actions should be removed from <i>taggedActions</i> after their execution. Set to false if the same Action should be performed on multiple items with the same tag.
<i>textOption</i>	Defines whether text items should be converted into paths when drawing.

Returns

An Avalonia.Controls.Canvas containing the rendered graphics objects.

Definition at line 2275 of file AvaloniaContext.cs.

6.3.3.4 PaintToCanvas() [4/4]

```
static Avalonia.Controls.Canvas VectSharp.Canvas.AvaloniaContextInterpreter.PaintToCanvas (
    this Page page,
    TextOptions textOption = TextOptions.ConvertIfNecessary ) [static]
```

Render a [Page](#) to an Avalonia.Controls.Canvas.

Parameters

<i>page</i>	The Page to render.
<i>textOption</i>	Defines whether text items should be converted into paths when drawing.

Returns

An Avalonia.Controls.Canvas containing the rendered graphics objects.

Definition at line 2213 of file AvaloniaContext.cs.

The documentation for this class was generated from the following file:

- VectSharp.Canvas/AvaloniaContext.cs

6.4 VectSharp.TrueTypeFile.Bearings Struct Reference

Represents the left- and right-side bearings of a glyph.

Public Attributes

- int [LeftSideBearing](#)
The left-side bearing of the glyph.
- int [RightSideBearing](#)
The right-side bearing of the glyph.

6.4.1 Detailed Description

Represents the left- and right-side bearings of a glyph.

Definition at line 2127 of file TrueType.cs.

6.4.2 Member Data Documentation

6.4.2.1 LeftSideBearing

```
int VectSharp.TrueTypeFile.Bearings.LeftSideBearing
```

The left-side bearing of the glyph.

Definition at line 2132 of file TrueType.cs.

6.4.2.2 RightSideBearing

```
int VectSharp.TrueTypeFile.Bearings.RightSideBearing
```

The right-side bearing of the glyph.

Definition at line 2137 of file TrueType.cs.

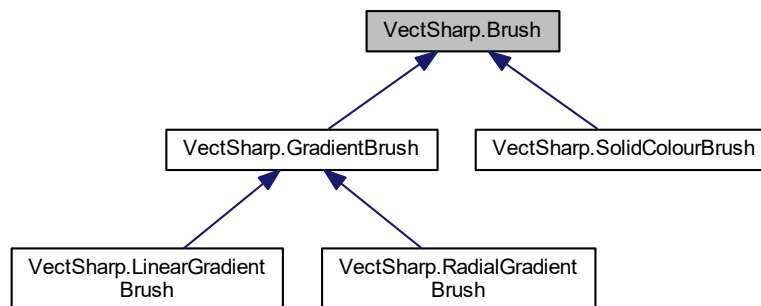

The documentation for this struct was generated from the following file:

- VectSharp/TrueType.cs

6.5 VectSharp.Brush Class Reference

Represents a brush used to fill or stroke graphics elements. This could be a solid colour, or a more complicated gradient or pattern.

Inheritance diagram for VectSharp.Brush:

Public Member Functions

- abstract [Brush MultiplyOpacity](#) (double opacity)
Returns a brush corresponding the current instance, with the specified opacity multiplication applied.

Static Public Member Functions

- static implicit [operator Brush](#) ([Colour](#) colour)
Implicitly converts a [Colour](#) into a [SolidColourBrush](#).

6.5.1 Detailed Description

Represents a brush used to fill or stroke graphics elements. This could be a solid colour, or a more complicated gradient or pattern.

Definition at line 13 of file Brush.cs.

6.5.2 Member Function Documentation

6.5.2.1 MultiplyOpacity()

```
abstract Brush VectSharp.Brush.MultiplyOpacity (
    double opacity ) [pure virtual]
```

Returns a brush corresponding the current instance, with the specified *opacity* multiplication applied.

Parameters

<i>opacity</i>	The value that will be used to multiply the opacity of the brush.
----------------	---

Returns

A brush corresponding the current instance, with the specified *opacity* multiplication applied.

Implemented in [VectSharp.RadialGradientBrush](#), [VectSharp.LinearGradientBrush](#), and [VectSharp.SolidColourBrush](#).

6.5.2.2 operator Brush()

```
static implicit VectSharp.Brush.operator Brush (
    Colour colour ) [static]
```

Implicitly converts a [Colour](#) into a [SolidColourBrush](#).

Parameters

<i>colour</i>	The Colour to use for the brush.
---------------	--

Definition at line 28 of file Brush.cs.

The documentation for this class was generated from the following file:

- VectSharp/Brush.cs

6.6 VectSharp.Colour Struct Reference

Represents an RGB colour.

Inheritance diagram for VectSharp.Colour:

Public Member Functions

- override bool [Equals](#) (object obj)
- bool [Equals](#) ([Colour](#) col)
- override int [GetHashCode](#) ()
- string [ToCSSString](#) (bool includeAlpha)
 Convert the [Colour](#) object into a hex string that is constituted by a "#" followed by two-digit hexadecimal representations of the red, green and blue components of the colour (in the range 0x00 - 0xFF). Optionally also includes opacity (alpha channel) data.
- [Colour WithAlpha](#) (double alpha)
 Create a new [Colour](#) with the same RGB components as the current [Colour](#), but with the specified alpha .
- [Colour WithAlpha](#) (byte alpha)
 Create a new [Colour](#) with the same RGB components as the current [Colour](#), but with the specified alpha .
- double double double Z [ToXYZ](#) ()
- double double double b [ToLab](#) ()
- double double double L [ToHSL](#) ()

Static Public Member Functions

- static [Colour FromRgb](#) (double r, double g, double b)
 Create a new colour from RGB (red, green and blue) values.
- static [Colour FromRgb](#) (byte r, byte g, byte b)
 Create a new colour from RGB (red, green and blue) values.
- static [Colour FromRgb](#) (int r, int g, int b)
 Create a new colour from RGB (red, green and blue) values.
- static [Colour FromRgba](#) (double r, double g, double b, double a)
 Create a new colour from RGBA (red, green, blue and alpha) values.
- static [Colour FromRgba](#) (byte r, byte g, byte b, byte a)
 Create a new colour from RGBA (red, green, blue and alpha) values.
- static [Colour FromRgba](#) (byte r, byte g, byte b, double a)
 Create a new colour from RGBA (red, green, blue and alpha) values.
- static [Colour FromRgba](#) (int r, int g, int b, int a)
 Create a new colour from RGBA (red, green, blue and alpha) values.
- static [Colour FromRgba](#) (int r, int g, int b, double a)
 Create a new colour from RGBA (red, green, blue and alpha) values.

- static [Colour FromRgba](#) ((int r, int g, int b, double a) colour)
Create a new colour from RGBA (red, green, blue and alpha) values.
- static bool [operator==](#) ([Colour](#) col1, [Colour](#) col2)
- static bool [operator!=](#) ([Colour](#) col1, [Colour](#) col2)
- static ? [Colour FromCSSString](#) (string cssString)
Convert a CSS colour string into a [Colour](#) object.
- static [Colour WithAlpha](#) ([Colour](#) original, double alpha)
Create a new [Colour](#) with the same RGB components as the original [Colour](#), but with the specified alpha .
- static [Colour WithAlpha](#) ([Colour](#) original, byte alpha)
Create a new [Colour](#) with the same RGB components as the original [Colour](#), but with the specified alpha .
- static [Colour FromXYZ](#) (double x, double y, double z)
Creates a [Colour](#) from CIE XYZ coordinates.
- static [Colour FromLab](#) (double L, double a, double b)
Creates a [Colour](#) from CIE Lab coordinates (under Illuminant D65).
- static [Colour FromHSL](#) (double h, double s, double l)
Creates a [Colour](#) from HSL coordinates.

Public Attributes

- double [R](#)
Red component of the colour. Range: [0, 1].
- double [G](#)
Green component of the colour. Range: [0, 1].
- double [B](#)
Blue component of the colour. Range: [0, 1].
- double [A](#)
Alpha component of the colour. Range: [0, 1].
- double [X](#)
Converts a [Colour](#) to the CIE XYZ colour space.
- double double [Y](#)
- double [L](#)
Converts a [Colour](#) to the CIE Lab colour space (under Illuminant D65).
- double double [a](#)
- double [H](#)
Converts a [Colour](#) to the HSL colour space.
- double double [S](#)

6.6.1 Detailed Description

Represents an RGB colour.

Definition at line 25 of file Colour.cs.

6.6.2 Member Function Documentation

6.6.2.1 FromCSSString()

```
static ? Colour VectSharp.Colour.FromCSSString (
    string cssString ) [static]
```

Convert a CSS colour string into a [Colour](#) object.

Parameters

<i>cssString</i>	The CSS colour string. In addition to 148 standard colour names (case-insensitive), #RGB, #RGBA, #RRGGBB and #RRGGBBAA hex strings and rgb(r, g, b) and rgba(r, g, b, a) functional colour notations are supported.
------------------	---

Returns

Definition at line 225 of file Colour.cs.

6.6.2.2 FromHSL()

```
static Colour VectSharp.Colour.FromHSL (  
    double h,  
    double s,  
    double l ) [static]
```

Creates a [Colour](#) from HSL coordinates.

Parameters

<i>h</i>	The H component. Should be in range [0, 1].
<i>s</i>	The S component. Should be in range [0, 1].
<i>l</i>	The L component. Should be in range [0, 1].

Returns

A [Colour](#) created from the specified components.

Definition at line 575 of file Colour.cs.

6.6.2.3 FromLab()

```
static Colour VectSharp.Colour.FromLab (  
    double L,  
    double a,  
    double b ) [static]
```

Creates a [Colour](#) from CIE Lab coordinates (under Illuminant D65).

Parameters

<i>L</i>	The L* component.
<i>a</i>	The a* component.
<i>b</i>	The b* component.

Returns

An sRGB [Colour](#) created from the specified components.

Definition at line 497 of file Colour.cs.

6.6.2.4 FromRgb() [1/3]

```
static Colour VectSharp.Colour.FromRgb (  
    byte r,  
    byte g,  
    byte b ) [static]
```

Create a new colour from RGB (red, green and blue) values.

Parameters

<i>r</i>	The red component of the colour. Range: [0, 255].
<i>g</i>	The green component of the colour. Range: [0, 255].
<i>b</i>	The blue component of the colour. Range: [0, 255].

Returns

A [Colour](#) struct with the specified components and an alpha component of 1.

Definition at line 74 of file Colour.cs.

6.6.2.5 FromRgb() [2/3]

```
static Colour VectSharp.Colour.FromRgb (  
    double r,  
    double g,  
    double b ) [static]
```

Create a new colour from RGB (red, green and blue) values.

Parameters

<i>r</i>	The red component of the colour. Range: [0, 1].
<i>g</i>	The green component of the colour. Range: [0, 1].
<i>b</i>	The blue component of the colour. Range: [0, 1].

Returns

A [Colour](#) struct with the specified components and an alpha component of 1.

Definition at line 62 of file Colour.cs.

6.6.2.6 FromRgb() [3/3]

```
static Colour VectSharp.Colour.FromRgb (  
    int r,  
    int g,  
    int b ) [static]
```

Create a new colour from RGB (red, green and blue) values.

Parameters

<i>r</i>	The red component of the colour. Range: [0, 255].
<i>g</i>	The green component of the colour. Range: [0, 255].
<i>b</i>	The blue component of the colour. Range: [0, 255].

Returns

A [Colour](#) struct with the specified components and an alpha component of 1.

Definition at line 86 of file Colour.cs.

6.6.2.7 FromRgba() [1/6]

```
static Colour VectSharp.Colour.FromRgba (  
    (int r, int g, int b, double a) colour ) [static]
```

Create a new colour from RGBA (red, green, blue and alpha) values.

Parameters

<i>colour</i>	A ValueTuple<Int32, Int32, Int32, Double> containing component information for the colour. For r, g, and b, range: [0, 255]; for a, range: [0, 1].
---------------	--

Returns

A [Colour](#) struct with the specified components.

Definition at line 160 of file Colour.cs.

6.6.2.8 FromRgba() [2/6]

```
static Colour VectSharp.Colour.FromRgba (  
    byte r,  
    byte g,  
    byte b,  
    byte a ) [static]
```

Create a new colour from RGBA (red, green, blue and alpha) values.

Parameters

<i>r</i>	The red component of the colour. Range: [0, 255].
<i>g</i>	The green component of the colour. Range: [0, 255].
<i>b</i>	The blue component of the colour. Range: [0, 255].
<i>a</i>	The alpha component of the colour. Range: [0, 255].

Returns

A [Colour](#) struct with the specified components.

Definition at line 112 of file Colour.cs.

6.6.2.9 FromRgba() [3/6]

```
static Colour VectSharp.Colour.FromRgba (  
    byte r,  
    byte g,  
    byte b,  
    double a ) [static]
```

Create a new colour from RGBA (red, green, blue and alpha) values.

Parameters

<i>r</i>	The red component of the colour. Range: [0, 255].
<i>g</i>	The green component of the colour. Range: [0, 255].
<i>b</i>	The blue component of the colour. Range: [0, 255].
<i>a</i>	The alpha component of the colour. Range: [0, 1].

Returns

A [Colour](#) struct with the specified components.

Definition at line 125 of file Colour.cs.

6.6.2.10 FromRgba() [4/6]

```
static Colour VectSharp.Colour.FromRgba (  
    double r,  
    double g,  
    double b,  
    double a ) [static]
```

Create a new colour from RGBA (red, green, blue and alpha) values.

Parameters

<i>r</i>	The red component of the colour. Range: [0, 1].
<i>g</i>	The green component of the colour. Range: [0, 1].
<i>b</i>	The blue component of the colour. Range: [0, 1].
<i>a</i>	The alpha component of the colour. Range: [0, 1].

Returns

A [Colour](#) struct with the specified components.

Definition at line 99 of file Colour.cs.

6.6.2.11 FromRgba() [5/6]

```
static Colour VectSharp.Colour.FromRgba (  
    int r,  
    int g,  
    int b,  
    double a ) [static]
```

Create a new colour from RGBA (red, green, blue and alpha) values.

Parameters

<i>r</i>	The red component of the colour. Range: [0, 255].
<i>g</i>	The green component of the colour. Range: [0, 255].
<i>b</i>	The blue component of the colour. Range: [0, 255].
<i>a</i>	The alpha component of the colour. Range: [0, 1].

Returns

A [Colour](#) struct with the specified components.

Definition at line 150 of file Colour.cs.

6.6.2.12 FromRgba() [6/6]

```
static Colour VectSharp.Colour.FromRgba (
    int r,
    int g,
    int b,
    int a ) [static]
```

Create a new colour from RGBA (red, green, blue and alpha) values.

Parameters

<i>r</i>	The red component of the colour. Range: [0, 255].
<i>g</i>	The green component of the colour. Range: [0, 255].
<i>b</i>	The blue component of the colour. Range: [0, 255].
<i>a</i>	The alpha component of the colour. Range: [0, 255].

Returns

A [Colour](#) struct with the specified components.

Definition at line 137 of file Colour.cs.

6.6.2.13 FromXYZ()

```
static Colour VectSharp.Colour.FromXYZ (
    double x,
    double y,
    double z ) [static]
```

Creates a [Colour](#) from CIE XYZ coordinates.

Parameters

<i>x</i>	The X coordinate.
<i>y</i>	The Y coordinate.
<i>z</i>	The Z coordinate.

Returns

An sRGB [Colour](#) created from the specified components.

Definition at line 415 of file Colour.cs.

6.6.2.14 ToCSSString()

```
string VectSharp.Colour.ToCSSString (
    bool includeAlpha )
```

Convert the [Colour](#) object into a hex string that is constituted by a "#" followed by two-digit hexadecimal representations of the red, green and blue components of the colour (in the range 0x00 - 0xFF). Optionally also includes opacity (alpha channel) data.

Parameters

<i>includeAlpha</i>	Whether two additional hex digits representing the colour's opacity (alpha channel) should be included in the string.
---------------------	---

Returns

A hex colour string.

Definition at line 208 of file Colour.cs.

6.6.2.15 WithAlpha() [1/4]

```
Colour VectSharp.Colour.WithAlpha (
    byte alpha )
```

Create a new [Colour](#) with the same RGB components as the current [Colour](#), but with the specified *alpha* .

Parameters

<i>alpha</i>	The alpha component of the new Colour .
--------------	---

Returns

A [Colour](#) struct with the same RGB components as the current [Colour](#) and the specified *alpha* .

Definition at line 361 of file Colour.cs.

6.6.2.16 WithAlpha() [2/4]

```
static Colour VectSharp.Colour.WithAlpha (
    Colour original,
    byte alpha ) [static]
```

Create a new [Colour](#) with the same RGB components as the *original* [Colour](#), but with the specified *alpha* .

Parameters

<i>original</i>	The original Colour from which the RGB components will be taken.
<i>alpha</i>	The alpha component of the new Colour .

Returns

A [Colour](#) struct with the same RGB components as the *original* [Colour](#) and the specified *alpha* .

Definition at line 341 of file Colour.cs.

6.6.2.17 WithAlpha() [3/4]

```
static Colour VectSharp.Colour.WithAlpha (  
    Colour original,  
    double alpha ) [static]
```

Create a new [Colour](#) with the same RGB components as the *original* [Colour](#), but with the specified *alpha* .

Parameters

<i>original</i>	The original Colour from which the RGB components will be taken.
<i>alpha</i>	The alpha component of the new Colour .

Returns

A [Colour](#) struct with the same RGB components as the *original* [Colour](#) and the specified *alpha* .

Definition at line 330 of file Colour.cs.

6.6.2.18 WithAlpha() [4/4]

```
Colour VectSharp.Colour.WithAlpha (  
    double alpha )
```

Create a new [Colour](#) with the same RGB components as the current [Colour](#), but with the specified *alpha* .

Parameters

<i>alpha</i>	The alpha component of the new Colour .
--------------	---

Returns

A [Colour](#) struct with the same RGB components as the current [Colour](#) and the specified *alpha* .

Definition at line 351 of file Colour.cs.

6.6.3 Member Data Documentation

6.6.3.1 A

```
double VectSharp.Colour.A
```

Alpha component of the colour. Range: [0, 1].

Definition at line 45 of file Colour.cs.

6.6.3.2 B

```
double VectSharp.Colour.B
```

Blue component of the colour. Range: [0, 1].

Definition at line 40 of file Colour.cs.

6.6.3.3 G

```
double VectSharp.Colour.G
```

Green component of the colour. Range: [0, 1].

Definition at line 35 of file Colour.cs.

6.6.3.4 H

```
double VectSharp.Colour.H
```

Converts a [Colour](#) to the HSL colour space.

Returns

A [ValueType](#) containing the H, S and L components of the [Colour](#). Each component has range [0, 1].

Definition at line 528 of file Colour.cs.

6.6.3.5 L

```
double VectSharp.Colour.L
```

Converts a [Colour](#) to the CIE Lab colour space (under Illuminant D65).

Returns

A [ValueType](#) containing the L*, a* and b* components of the [Colour](#).

Definition at line 459 of file Colour.cs.

6.6.3.6 R

```
double VectSharp.Colour.R
```

Red component of the colour. Range: [0, 1].

Definition at line 30 of file Colour.cs.

6.6.3.7 X

```
double VectSharp.Colour.X
```

Converts a [Colour](#) to the CIE XYZ colour space.

Returns

A [ValueTuple](#) containing the X, Y and Z components of the [Colour](#).

Definition at line 370 of file Colour.cs.

The documentation for this struct was generated from the following files:

- VectSharp/Colour.cs
- VectSharp/StandardColours.cs

6.7 VectSharp.ThreeD.ColourMaterial Class Reference

Represents a material that always has the same colour, regardless of light.

Inheritance diagram for VectSharp.ThreeD.ColourMaterial:

Public Member Functions

- [ColourMaterial](#) ([Colour](#) colour)
Creates a new [ColourMaterial](#) instance.
- [Colour](#) [GetColour](#) (Point3D point, NormalizedVector3D surfaceNormal, Camera camera, IList< [ILightSource](#) > lights, IList< double > obstructions)
Obtains the [Colour](#) at the specified point.

Properties

- [Colour](#) [Colour](#) [get]
The colour of the material.

6.7.1 Detailed Description

Represents a material that always has the same colour, regardless of light.

Definition at line 31 of file Materials.cs.

6.7.2 Constructor & Destructor Documentation

6.7.2.1 ColourMaterial()

```
VectSharp.ThreeD.ColourMaterial.ColourMaterial (  
    Colour colour )
```

Creates a new [ColourMaterial](#) instance.

Parameters

<i>colour</i>	The colour of the material.
---------------	-----------------------------

Definition at line 42 of file Materials.cs.

6.7.3 Property Documentation

6.7.3.1 Colour

`Colour VectSharp.ThreeD.ColourMaterial.Colour [get]`

The colour of the material.

Definition at line 36 of file Materials.cs.

The documentation for this class was generated from the following file:

- VectSharp.ThreeD/Materials.cs

6.8 VectSharp.Colours Class Reference

Standard colours.

6.8.1 Detailed Description

Standard colours.

Definition at line 182 of file StandardColours.cs.

6.8.2 Member Data Documentation

6.8.2.1 AliceBlue

```
Colour VectSharp.Colours.AliceBlue = Colour.FromRgb(240, 248, 255) [static]
```

AliceBlue #F0F8FF

Definition at line 599 of file StandardColours.cs.

6.8.2.2 AntiqueWhite

```
Colour VectSharp.Colours.AntiqueWhite = Colour.FromRgb(250, 235, 215) [static]
```

AntiqueWhite #FAEBD7

Definition at line 639 of file StandardColours.cs.

6.8.2.3 Aqua

```
Colour VectSharp.Colours.Aqua = Colour.FromRgb(0, 255, 255) [static]
```

Aqua #00FFFF

Definition at line 243 of file StandardColours.cs.

6.8.2.4 Aquamarine

```
Colour VectSharp.Colours.Aquamarine = Colour.FromRgb(127, 255, 212) [static]
```

Aquamarine #7FFFD4

Definition at line 375 of file StandardColours.cs.

6.8.2.5 Azure

```
Colour VectSharp.Colours.Azure = Colour.FromRgb(240, 255, 255) [static]
```

Azure #F0FFFF

Definition at line 607 of file StandardColours.cs.

6.8.2.6 Beige

```
Colour VectSharp.Colours.Beige = Colour.FromRgb(245, 245, 220) [static]
```

Beige #F5F5DC

Definition at line 619 of file StandardColours.cs.

6.8.2.7 Bisque

```
Colour VectSharp.Colours.Bisque = Colour.FromRgb(255, 228, 196) [static]
```

Bisque #FFE4C4

Definition at line 723 of file StandardColours.cs.

6.8.2.8 Black

```
Colour VectSharp.Colours.Black = Colour.FromRgb(0, 0, 0) [static]
```

Black #000000

Definition at line 187 of file StandardColours.cs.

6.8.2.9 BlanchedAlmond

```
Colour VectSharp.Colours.BlanchedAlmond = Colour.FromRgb(255, 235, 205) [static]
```

BlanchedAlmond #FFEBCD

Definition at line 731 of file StandardColours.cs.

6.8.2.10 Blue

```
Colour VectSharp.Colours.Blue = Colour.FromRgb(0, 0, 255) [static]
```

Blue #0000FF

Definition at line 203 of file StandardColours.cs.

6.8.2.11 BlueViolet

```
Colour VectSharp.Colours.BlueViolet = Colour.FromRgb(138, 43, 226) [static]
```

BlueViolet #8A2BE2

Definition at line 407 of file StandardColours.cs.

6.8.2.12 Brown

```
Colour VectSharp.Colours.Brown = Colour.FromRgb(165, 42, 42) [static]
```

Brown #A52A2A

Definition at line 455 of file StandardColours.cs.

6.8.2.13 BurlyWood

```
Colour VectSharp.Colours.BurlyWood = Colour.FromRgb(222, 184, 135) [static]
```

BurlyWood #DEB887

Definition at line 567 of file StandardColours.cs.

6.8.2.14 CadetBlue

```
Colour VectSharp.Colours.CadetBlue = Colour.FromRgb(95, 158, 160) [static]
```

CadetBlue #5F9EA0

Definition at line 315 of file StandardColours.cs.

6.8.2.15 Chartreuse

```
Colour VectSharp.Colours.Chartreuse = Colour.FromRgb(127, 255, 0) [static]
```

Chartreuse #7FFF00

Definition at line 371 of file StandardColours.cs.

6.8.2.16 Chocolate

```
Colour VectSharp.Colours.Chocolate = Colour.FromRgb(210, 105, 30) [static]
```

Chocolate #D2691E

Definition at line 523 of file StandardColours.cs.

6.8.2.17 Coral

```
Colour VectSharp.Colours.Coral = Colour.FromRgb(255, 127, 80) [static]
```

Coral #FF7F50

Definition at line 683 of file StandardColours.cs.

6.8.2.18 CornflowerBlue

```
Colour VectSharp.Colours.CornflowerBlue = Colour.FromRgb(100, 149, 237) [static]
```

CornflowerBlue #6495ED

Definition at line 319 of file StandardColours.cs.

6.8.2.19 Cornsilk

```
Colour VectSharp.Colours.Cornsilk = Colour.FromRgb(255, 248, 220) [static]
```

Cornsilk #FFF8DC

Definition at line 747 of file StandardColours.cs.

6.8.2.20 Crimson

```
Colour VectSharp.Colours.Crimson = Colour.FromRgb(220, 20, 60) [static]
```

Crimson #DC143C

Definition at line 555 of file StandardColours.cs.

6.8.2.21 Cyan

```
Colour VectSharp.Colours.Cyan = Colour.FromRgb(0, 255, 255) [static]
```

Cyan #00FFFF

Definition at line 247 of file StandardColours.cs.

6.8.2.22 DarkBlue

```
Colour VectSharp.Colours.DarkBlue = Colour.FromRgb(0, 0, 139) [static]
```

DarkBlue #00008B

Definition at line 195 of file StandardColours.cs.

6.8.2.23 DarkCyan

```
Colour VectSharp.Colours.DarkCyan = Colour.FromRgb(0, 139, 139) [static]
```

DarkCyan #008B8B

Definition at line 219 of file StandardColours.cs.

6.8.2.24 DarkGoldenRod

```
Colour VectSharp.Colours.DarkGoldenRod = Colour.FromRgb(184, 134, 11) [static]
```

DarkGoldenRod #B8860B

Definition at line 491 of file StandardColours.cs.

6.8.2.25 DarkGray

```
Colour VectSharp.Colours.DarkGray = Colour.FromRgb(169, 169, 169) [static]
```

DarkGray #A9A9A9

Definition at line 459 of file StandardColours.cs.

6.8.2.26 DarkGreen

```
Colour VectSharp.Colours.DarkGreen = Colour.FromRgb(0, 100, 0) [static]
```

DarkGreen #006400

Definition at line 207 of file StandardColours.cs.

6.8.2.27 DarkGrey

```
Colour VectSharp.Colours.DarkGrey = Colour.FromRgb(169, 169, 169) [static]
```

DarkGrey #A9A9A9

Definition at line 463 of file StandardColours.cs.

6.8.2.28 DarkKhaki

```
Colour VectSharp.Colours.DarkKhaki = Colour.FromRgb(189, 183, 107) [static]
```

DarkKhaki #BDB76B

Definition at line 503 of file StandardColours.cs.

6.8.2.29 DarkMagenta

```
Colour VectSharp.Colours.DarkMagenta = Colour.FromRgb(139, 0, 139) [static]
```

DarkMagenta #8B008B

Definition at line 415 of file StandardColours.cs.

6.8.2.30 DarkOliveGreen

```
Colour VectSharp.Colours.DarkOliveGreen = Colour.FromRgb(85, 107, 47) [static]
```

DarkOliveGreen #556B2F

Definition at line 311 of file StandardColours.cs.

6.8.2.31 DarkOrange

```
Colour VectSharp.Colours.DarkOrange = Colour.FromRgb(255, 140, 0) [static]
```

DarkOrange #FF8C00

Definition at line 687 of file StandardColours.cs.

6.8.2.32 DarkOrchid

```
Colour VectSharp.Colours.DarkOrchid = Colour.FromRgb(153, 50, 204) [static]
```

DarkOrchid #9932CC

Definition at line 443 of file StandardColours.cs.

6.8.2.33 DarkRed

```
Colour VectSharp.Colours.DarkRed = Colour.FromRgb(139, 0, 0) [static]
```

DarkRed #8B0000

Definition at line 411 of file StandardColours.cs.

6.8.2.34 DarkSalmon

```
Colour VectSharp.Colours.DarkSalmon = Colour.FromRgb(233, 150, 122) [static]
```

DarkSalmon #E9967A

Definition at line 579 of file StandardColours.cs.

6.8.2.35 DarkSeaGreen

```
Colour VectSharp.Colours.DarkSeaGreen = Colour.FromRgb(143, 188, 143) [static]
```

DarkSeaGreen #8FBC8F

Definition at line 423 of file StandardColours.cs.

6.8.2.36 DarkSlateBlue

```
Colour VectSharp.Colours.DarkSlateBlue = Colour.FromRgb(72, 61, 139) [static]
```

DarkSlateBlue #483D8B

Definition at line 299 of file StandardColours.cs.

6.8.2.37 DarkSlateGray

```
Colour VectSharp.Colours.DarkSlateGray = Colour.FromRgb(47, 79, 79) [static]
```

DarkSlateGray #2F4F4F

Definition at line 271 of file StandardColours.cs.

6.8.2.38 DarkSlateGrey

```
Colour VectSharp.Colours.DarkSlateGrey = Colour.FromRgb(47, 79, 79) [static]
```

DarkSlateGrey #2F4F4F

Definition at line 275 of file StandardColours.cs.

6.8.2.39 DarkTurquoise

```
Colour VectSharp.Colours.DarkTurquoise = Colour.FromRgb(0, 206, 209) [static]
```

DarkTurquoise #00CED1

Definition at line 227 of file StandardColours.cs.

6.8.2.40 DarkViolet

```
Colour VectSharp.Colours.DarkViolet = Colour.FromRgb(148, 0, 211) [static]
```

DarkViolet #9400D3

Definition at line 435 of file StandardColours.cs.

6.8.2.41 DeepPink

```
Colour VectSharp.Colours.DeepPink = Colour.FromRgb(255, 20, 147) [static]
```

DeepPink #FF1493

Definition at line 667 of file StandardColours.cs.

6.8.2.42 DeepSkyBlue

```
Colour VectSharp.Colours.DeepSkyBlue = Colour.FromRgb(0, 191, 255) [static]
```

DeepSkyBlue #00BFFF

Definition at line 223 of file StandardColours.cs.

6.8.2.43 DimGray

```
Colour VectSharp.Colours.DimGray = Colour.FromRgb(105, 105, 105) [static]
```

DimGray #696969

Definition at line 331 of file StandardColours.cs.

6.8.2.44 DimGrey

```
Colour VectSharp.Colours.DimGrey = Colour.FromRgb(105, 105, 105) [static]
```

DimGrey #696969

Definition at line 335 of file StandardColours.cs.

6.8.2.45 DodgerBlue

```
Colour VectSharp.Colours.DodgerBlue = Colour.FromRgb(30, 144, 255) [static]
```

DodgerBlue #1E90FF

Definition at line 255 of file StandardColours.cs.

6.8.2.46 FireBrick

```
Colour VectSharp.Colours.FireBrick = Colour.FromRgb(178, 34, 34) [static]
```

FireBrick #B22222

Definition at line 487 of file StandardColours.cs.

6.8.2.47 FloralWhite

```
Colour VectSharp.Colours.FloralWhite = Colour.FromRgb(255, 250, 240) [static]
```

FloralWhite #FFFAF0

Definition at line 755 of file StandardColours.cs.

6.8.2.48 ForestGreen

```
Colour VectSharp.Colours.ForestGreen = Colour.FromRgb(34, 139, 34) [static]
```

ForestGreen #228B22

Definition at line 263 of file StandardColours.cs.

6.8.2.49 Fuchsia

```
Colour VectSharp.Colours.Fuchsia = Colour.FromRgb(255, 0, 255) [static]
```

Fuchsia #FF00FF

Definition at line 659 of file StandardColours.cs.

6.8.2.50 Gainsboro

```
Colour VectSharp.Colours.Gainsboro = Colour.FromRgb(220, 220, 220) [static]
```

Gainsboro #DCDCDC

Definition at line 559 of file StandardColours.cs.

6.8.2.51 GhostWhite

```
Colour VectSharp.Colours.GhostWhite = Colour.FromRgb(248, 248, 255) [static]
```

GhostWhite #F8F8FF

Definition at line 631 of file StandardColours.cs.

6.8.2.52 Gold

```
Colour VectSharp.Colours.Gold = Colour.FromRgb(255, 215, 0) [static]
```

Gold #FFD700

Definition at line 707 of file StandardColours.cs.

6.8.2.53 GoldenRod

```
Colour VectSharp.Colours.GoldenRod = Colour.FromRgb(218, 165, 32) [static]
```

GoldenRod #DAA520

Definition at line 547 of file StandardColours.cs.

6.8.2.54 Gray

```
Colour VectSharp.Colours.Gray = Colour.FromRgb(128, 128, 128) [static]
```

Gray #808080

Definition at line 391 of file StandardColours.cs.

6.8.2.55 Green

```
Colour VectSharp.Colours.Green = Colour.FromRgb(0, 128, 0) [static]
```

Green #008000

Definition at line 211 of file StandardColours.cs.

6.8.2.56 GreenYellow

```
Colour VectSharp.Colours.GreenYellow = Colour.FromRgb(173, 255, 47) [static]
```

GreenYellow #ADFF2F

Definition at line 471 of file StandardColours.cs.

6.8.2.57 Grey

```
Colour VectSharp.Colours.Grey = Colour.FromRgb(128, 128, 128) [static]
```

Grey #808080

Definition at line 395 of file StandardColours.cs.

6.8.2.58 HoneyDew

```
Colour VectSharp.Colours.HoneyDew = Colour.FromRgb(240, 255, 240) [static]
```

HoneyDew #F0FFF0

Definition at line 603 of file StandardColours.cs.

6.8.2.59 HotPink

```
Colour VectSharp.Colours.HotPink = Colour.FromRgb(255, 105, 180) [static]
```

HotPink #FF69B4

Definition at line 679 of file StandardColours.cs.

6.8.2.60 IndianRed

```
Colour VectSharp.Colours.IndianRed = Colour.FromRgb(205, 92, 92) [static]
```

IndianRed #CD5C5C

Definition at line 515 of file StandardColours.cs.

6.8.2.61 Indigo

```
Colour VectSharp.Colours.Indigo = Colour.FromRgb(75, 0, 130) [static]
```

Indigo #4B0082

Definition at line 307 of file StandardColours.cs.

6.8.2.62 Ivory

```
Colour VectSharp.Colours.Ivory = Colour.FromRgb(255, 255, 240) [static]
```

Ivory #FFFFFF0

Definition at line 771 of file StandardColours.cs.

6.8.2.63 Khaki

```
Colour VectSharp.Colours.Khaki = Colour.FromRgb(240, 230, 140) [static]
```

Khaki #F0E68C

Definition at line 595 of file StandardColours.cs.

6.8.2.64 Lavender

```
Colour VectSharp.Colours.Lavender = Colour.FromRgb(230, 230, 250) [static]
```

Lavender #E6E6FA

Definition at line 575 of file StandardColours.cs.

6.8.2.65 LavenderBlush

```
Colour VectSharp.Colours.LavenderBlush = Colour.FromRgb(255, 240, 245) [static]
```

LavenderBlush #FFF0F5

Definition at line 739 of file StandardColours.cs.

6.8.2.66 LawnGreen

```
Colour VectSharp.Colours.LawnGreen = Colour.FromRgb(124, 252, 0) [static]
```

LawnGreen #7CFC00

Definition at line 367 of file StandardColours.cs.

6.8.2.67 LemonChiffon

```
Colour VectSharp.Colours.LemonChiffon = Colour.FromRgb(255, 250, 205) [static]
```

LemonChiffon #FFFACD

Definition at line 751 of file StandardColours.cs.

6.8.2.68 LightBlue

```
Colour VectSharp.Colours.LightBlue = Colour.FromRgb(173, 216, 230) [static]
```

LightBlue #ADD8E6

Definition at line 467 of file StandardColours.cs.

6.8.2.69 LightCoral

```
Colour VectSharp.Colours.LightCoral = Colour.FromRgb(240, 128, 128) [static]
```

LightCoral #F08080

Definition at line 591 of file StandardColours.cs.

6.8.2.70 LightCyan

```
Colour VectSharp.Colours.LightCyan = Colour.FromRgb(224, 255, 255) [static]
```

LightCyan #E0FFFF

Definition at line 571 of file StandardColours.cs.

6.8.2.71 LightGoldenRodYellow

```
Colour VectSharp.Colours.LightGoldenRodYellow = Colour.FromRgb(250, 250, 210) [static]
```

LightGoldenRodYellow #FAFAD2

Definition at line 647 of file StandardColours.cs.

6.8.2.72 LightGray

```
Colour VectSharp.Colours.LightGray = Colour.FromRgb(211, 211, 211) [static]
```

LightGray #D3D3D3

Definition at line 531 of file StandardColours.cs.

6.8.2.73 LightGreen

```
Colour VectSharp.Colours.LightGreen = Colour.FromRgb(144, 238, 144) [static]
```

LightGreen #90EE90

Definition at line 427 of file StandardColours.cs.

6.8.2.74 LightGrey

```
Colour VectSharp.Colours.LightGrey = Colour.FromRgb(211, 211, 211) [static]
```

LightGrey #D3D3D3

Definition at line 535 of file StandardColours.cs.

6.8.2.75 LightPink

```
Colour VectSharp.Colours.LightPink = Colour.FromRgb(255, 182, 193) [static]
```

LightPink #FFB6C1

Definition at line 699 of file StandardColours.cs.

6.8.2.76 LightSalmon

```
Colour VectSharp.Colours.LightSalmon = Colour.FromRgb(255, 160, 122) [static]
```

LightSalmon #FFA07A

Definition at line 691 of file StandardColours.cs.

6.8.2.77 LightSeaGreen

```
Colour VectSharp.Colours.LightSeaGreen = Colour.FromRgb(32, 178, 170) [static]
```

LightSeaGreen #20B2AA

Definition at line 259 of file StandardColours.cs.

6.8.2.78 LightSkyBlue

```
Colour VectSharp.Colours.LightSkyBlue = Colour.FromRgb(135, 206, 250) [static]
```

LightSkyBlue #87CEFA

Definition at line 403 of file StandardColours.cs.

6.8.2.79 LightSlateGray

```
Colour VectSharp.Colours.LightSlateGray = Colour.FromRgb(119, 136, 153) [static]
```

LightSlateGray #778899

Definition at line 355 of file StandardColours.cs.

6.8.2.80 LightSlateGrey

```
Colour VectSharp.Colours.LightSlateGrey = Colour.FromRgb(119, 136, 153) [static]
```

LightSlateGrey #778899

Definition at line 359 of file StandardColours.cs.

6.8.2.81 LightSteelBlue

```
Colour VectSharp.Colours.LightSteelBlue = Colour.FromRgb(176, 196, 222) [static]
```

LightSteelBlue #B0C4DE

Definition at line 479 of file StandardColours.cs.

6.8.2.82 LightYellow

```
Colour VectSharp.Colours.LightYellow = Colour.FromRgb(255, 255, 224) [static]
```

LightYellow #FFFFE0

Definition at line 767 of file StandardColours.cs.

6.8.2.83 Lime

```
Colour VectSharp.Colours.Lime = Colour.FromRgb(0, 255, 0) [static]
```

Lime #00FF00

Definition at line 235 of file StandardColours.cs.

6.8.2.84 LimeGreen

```
Colour VectSharp.Colours.LimeGreen = Colour.FromRgb(50, 205, 50) [static]
```

LimeGreen #32CD32

Definition at line 279 of file StandardColours.cs.

6.8.2.85 Linen

```
Colour VectSharp.Colours.Linen = Colour.FromRgb(250, 240, 230) [static]
```

Linen #FAF0E6

Definition at line 643 of file StandardColours.cs.

6.8.2.86 Magenta

```
Colour VectSharp.Colours.Magenta = Colour.FromRgb(255, 0, 255) [static]
```

Magenta #FF00FF

Definition at line 663 of file StandardColours.cs.

6.8.2.87 Maroon

```
Colour VectSharp.Colours.Maroon = Colour.FromRgb(128, 0, 0) [static]
```

Maroon #800000

Definition at line 379 of file StandardColours.cs.

6.8.2.88 MediumAquaMarine

```
Colour VectSharp.Colours.MediumAquaMarine = Colour.FromRgb(102, 205, 170) [static]

The documentation for this class was generated from the following file:

- VectSharp/StandardColours.cs

6.9 VectSharp.Font.DetailedFontMetrics Class Reference

Represents detailed information about the metrics of a text string when drawn with a certain font.

Properties

- double [Width](#) [get]
Width of the text (measured on the actual glyph outlines).
- double [Height](#) [get]
Height of the text (measured on the actual glyph outlines).
- double [LeftSideBearing](#) [get]
How much the leftmost glyph in the string overhangs the glyph origin on the left. Positive for glyphs that hang past the origin (e.g. italic 'f').
- double [RightSideBearing](#) [get]
How much the rightmost glyph in the string overhangs the glyph end on the right. Positive for glyphs that hang past the end (e.g. italic 'f').
- double [Top](#) [get]
Height of the tallest glyph in the string over the baseline. Always ≥ 0 .
- double [Bottom](#) [get]
Depth of the deepest glyph in the string below the baseline. Always ≤ 0 .

6.9.1 Detailed Description

Represents detailed information about the metrics of a text string when drawn with a certain font.

Definition at line 33 of file Font.cs.

6.9.2 Property Documentation

6.9.2.1 Bottom

```
double VectSharp.Font.DetailedFontMetrics.Bottom [get]
```

Depth of the deepest glyph in the string below the baseline. Always ≤ 0 .

Definition at line 63 of file Font.cs.

6.9.2.2 Height

```
double VectSharp.Font.DetailedFontMetrics.Height [get]
```

Height of the text (measured on the actual glyph outlines).

Definition at line 43 of file Font.cs.

6.9.2.3 LeftSideBearing

```
double VectSharp.Font.DetailedFontMetrics.LeftSideBearing [get]
```

How much the leftmost glyph in the string overhangs the glyph origin on the left. Positive for glyphs that hang past the origin (e.g. italic 'f').

Definition at line 48 of file Font.cs.

6.9.2.4 RightSideBearing

```
double VectSharp.Font.DetailedFontMetrics.RightSideBearing [get]
```

How much the rightmost glyph in the string overhangs the glyph end on the right. Positive for glyphs that hang past the end (e.g. italic 'f').

Definition at line 53 of file Font.cs.

6.9.2.5 Top

```
double VectSharp.Font.DetailedFontMetrics.Top [get]
```

Height of the tallest glyph in the string over the baseline. Always ≥ 0 .

Definition at line 58 of file Font.cs.

6.9.2.6 Width

```
double VectSharp.Font.DetailedFontMetrics.Width [get]
```

Width of the text (measured on the actual glyph outlines).

Definition at line 38 of file Font.cs.

The documentation for this class was generated from the following file:

- VectSharp/Font.cs

6.10 VectSharp.DisposableIntPtr Class Reference

An IDisposable wrapper around an IntPtr that frees the allocated memory when it is disposed.

Inheritance diagram for VectSharp.DisposableIntPtr:

Public Member Functions

- [DisposableIntPtr](#) (IntPtr pointer)
Create a new [DisposableIntPtr](#).
- void **Dispose** ()

Public Attributes

- readonly IntPtr [InternalPointer](#)
The pointer to the unmanaged memory.

6.10.1 Detailed Description

An IDisposable wrapper around an IntPtr that frees the allocated memory when it is disposed.

Definition at line 53 of file RasterImage.cs.

6.10.2 Constructor & Destructor Documentation

6.10.2.1 DisposableIntPtr()

```
VectSharp.DisposableIntPtr.DisposableIntPtr (
    IntPtr pointer )
```

Create a new [DisposableIntPtr](#).

Parameters

<i>pointer</i>	The pointer that should be freed upon disposing of this object.
----------------	---

Definition at line 64 of file RasterImage.cs.

6.10.3 Member Data Documentation

6.10.3.1 InternalPointer

```
readonly IntPtr VectSharp.DisposableIntPtr.InternalPointer
```

The pointer to the unmanaged memory.

Definition at line 58 of file RasterImage.cs.

The documentation for this class was generated from the following file:

- VectSharp/RasterImage.cs

6.11 VectSharp.Document Class Reference

Represents a collection of pages.

Public Member Functions

- [Document](#) ()
Create a new document.

Public Attributes

- List< [Page](#) > [Pages](#) = new List<[Page](#)>()
The pages in the document.

6.11.1 Detailed Description

Represents a collection of pages.

Definition at line 27 of file Document.cs.

6.11.2 Constructor & Destructor Documentation

6.11.2.1 Document()

```
VectSharp.Document.Document ( )
```

Create a new document.

Definition at line 38 of file Document.cs.

6.11.3 Member Data Documentation

6.11.3.1 Pages

```
List<Page> VectSharp.Document.Pages = new List<Page>()
```

The pages in the document.

Definition at line 32 of file Document.cs.

The documentation for this class was generated from the following file:

- VectSharp/Document.cs

6.12 VectSharp.Font Class Reference

Represents a typeface with a specific size.

Classes

- class [DetailedFontMetrics](#)

Represents detailed information about the metrics of a text string when drawn with a certain font.

Public Member Functions

- [Font](#) ([FontFamily](#) fontFamily, double fontSize)
Create a new [Font](#) object, given the base typeface and the font size.
- [Size MeasureText](#) (string text)
Measure the size of a text string when typeset with this font.
- [DetailedFontMetrics MeasureTextAdvanced](#) (string text)
Measure all the metrics of a text string when typeset with this font.

Properties

- double [FontSize](#) [get]
[Font](#) size, in graphics units.
- [FontFamily FontFamily](#) [get]
[Font](#) typeface.
- double [Ascent](#) [get]
Maximum height over the baseline of the usual glyphs in the font (there may be glyphs taller than this). Always ≥ 0 .
- double [Descent](#) [get]
Maximum depth below the baseline of the usual glyphs in the font (there may be glyphs deeper than this). Always ≤ 0 .
- double [YMax](#) [get]
Absolute maximum height over the baseline of the glyphs in the font. Always ≥ 0 .
- double [YMin](#) [get]
Absolute maximum depth below the baseline of the glyphs in the font. Always ≤ 0 .

6.12.1 Detailed Description

Represents a typeface with a specific size.

Definition at line 28 of file Font.cs.

6.12.2 Constructor & Destructor Documentation

6.12.2.1 Font()

```
VectSharp.Font.Font (
    FontFamily fontFamily,
    double fontSize )
```

Create a new [Font](#) object, given the base typeface and the font size.

Parameters

<i>fontFamily</i>	Base typeface. See FontFamily .
<i>fontSize</i>	The font size, in graphics units.

Definition at line 91 of file Font.cs.

6.12.3 Member Function Documentation

6.12.3.1 MeasureText()

```
Size VectSharp.Font.MeasureText (
    string text )
```

Measure the size of a text string when typeset with this font.

Parameters

<i>text</i>	The string to measure.
-------------	------------------------

Returns

A [Size](#) object representing the width and height of the text.

Definition at line 174 of file Font.cs.

6.12.3.2 MeasureTextAdvanced()

```
DetailedFontMetrics VectSharp.Font.MeasureTextAdvanced (
    string text )
```

Measure all the metrics of a text string when typeset with this font.

Parameters

<i>text</i>	The string to measure.
-------------	------------------------

Returns

A [DetailedFontMetrics](#) object representing the metrics of the text.

Definition at line 207 of file Font.cs.

6.12.4 Property Documentation

6.12.4.1 Ascent

```
double VectSharp.Font.Ascent [get]
```

Maximum height over the baseline of the usual glyphs in the font (there may be glyphs taller than this). Always ≥ 0 .

Definition at line 100 of file Font.cs.

6.12.4.2 Descent

```
double VectSharp.Font.Descent [get]
```

Maximum depth below the baseline of the usual glyphs in the font (there may be glyphs deeper than this). Always ≤ 0 .

Definition at line 118 of file Font.cs.

6.12.4.3 FontFamily

```
FontFamily VectSharp.Font.FontFamily [get]
```

Font typeface.

Definition at line 84 of file Font.cs.

6.12.4.4 FontSize

```
double VectSharp.Font.FontSize [get]
```

Font size, in graphics units.

Definition at line 79 of file Font.cs.

6.12.4.5 YMax

```
double VectSharp.Font.YMax [get]
```

Absolute maximum height over the baseline of the glyphs in the font. Always ≥ 0 .

Definition at line 136 of file Font.cs.

6.12.4.6 YMin

```
double VectSharp.Font.YMin [get]
```

Absolute maximum depth below the baseline of the glyphs in the font. Always ≤ 0 .

Definition at line 154 of file Font.cs.

The documentation for this class was generated from the following file:

- VectSharp/Font.cs

6.13 VectSharp.FontFamily Class Reference

Represents a typeface.

Inheritance diagram for VectSharp.FontFamily:

Public Types

- enum [StandardFontFamilies](#) {
 [StandardFontFamilies.TimesRoman](#), [StandardFontFamilies.TimesBold](#), [StandardFontFamilies.TimesItalic](#),
 [StandardFontFamilies.TimesBoldItalic](#),
 [StandardFontFamilies.Helvetica](#), [StandardFontFamilies.HelveticaBold](#), [StandardFontFamilies.HelveticaOblique](#),
 [StandardFontFamilies.HelveticaBoldOblique](#),
 [StandardFontFamilies.Courier](#), [StandardFontFamilies.CourierBold](#), [StandardFontFamilies.CourierOblique](#),
 [StandardFontFamilies.CourierBoldOblique](#),
 [StandardFontFamilies.Symbol](#), [StandardFontFamilies.ZapfDingbats](#) }

The 14 standard font families.

Public Member Functions

- [FontFamily](#) (string fileName)
Create a new [FontFamily](#).
- [FontFamily](#) (Stream ttfStream)
Create a new [FontFamily](#).
- [FontFamily](#) ([StandardFontFamilies](#) standardFontFamily)
Create a new standard [FontFamily](#).

Static Public Attributes

- static string[] [StandardFamilies](#) = new string[] { "Times-Roman", "Times-Bold", "Times-Italic", "Times-Bold↵Italic", "Helvetica", "Helvetica-Bold", "Helvetica-Oblique", "Helvetica-BoldOblique", "Courier", "Courier-Bold", "Courier-Oblique", "Courier-BoldOblique", "Symbol", "ZapfDingbats" }
The names of the 14 standard families that are guaranteed to be displayed correctly.
- static string[] [StandardFontFamilyResources](#)
The names of the resource streams pointing to the included TrueType font files for each of the standard 14 font families.

Properties

- bool [IsStandardFamily](#) [get]
Whether this is one of the 14 standard font families or not.
- string [FileName](#) [get]
Full path to the TrueType font file for this font family (or, if this is a standard font family, name of the font family).
- [TrueTypeFile](#) [TrueTypeFile](#) [get]
*Parsed TrueType font file for this font family. See also:
See also*
[VectSharp.TrueTypeFile](#)
- bool [IsBold](#) [get]
Whether this font is bold or not. This is set based on the information included in the OS/2 table of the TrueType file.
- bool [IsItalic](#) [get]
Whether this font is italic or oblique or not. This is set based on the information included in the OS/2 table of the TrueType file.
- bool [IsOblique](#) [get]
Whether this font is oblique or not. This is set based on the information included in the OS/2 table of the TrueType file.

6.13.1 Detailed Description

Represents a typeface.

Definition at line 243 of file Font.cs.

6.13.2 Member Enumeration Documentation

6.13.2.1 StandardFontFamilies

```
enum VectSharp.FontFamily.StandardFontFamilies [strong]
```

The 14 standard font families.

Enumerator

TimesRoman	Serif normal regular face.
TimesBold	Serif bold regular face.
TimesItalic	Serif normal italic face.
TimesBoldItalic	Serif bold italic face.
Helvetica	Sans-serif normal regular face.
HelveticaBold	Sans-serif bold regular face.
HelveticaOblique	Sans-serif normal oblique face.
HelveticaBoldOblique	Sans-serif bold oblique face.
Courier	Monospace normal regular face.
CourierBold	Monospace bold regular face.
CourierOblique	Monospace normal oblique face.
CourierBoldOblique	Monospace bold oblique face.
Symbol	Symbol font.
ZapfDingbats	Dingbat font.

Definition at line 283 of file Font.cs.

6.13.3 Constructor & Destructor Documentation

6.13.3.1 FontFamily() [1/3]

```
VectSharp.FontFamily.FontFamily (
    string fileName )
```

Create a new [FontFamily](#).

Parameters

<i>fileName</i>	The full path to the TrueType font file for this font family or the name of a standard font family.
-----------------	---

Definition at line 386 of file Font.cs.

6.13.3.2 FontFamily() [2/3]

```
VectSharp.FontFamily.FontFamily (
    Stream ttfStream )
```

Create a new [FontFamily](#).

Parameters

<i>ttfStream</i>	A stream containing a file in TTF format.
------------------	---

Definition at line 438 of file Font.cs.

6.13.3.3 FontFamily() [3/3]

```
VectSharp.FontFamily.FontFamily (
    StandardFontFamilies standardFontFamily )
```

Create a new standard [FontFamily](#).

Parameters

<i>standardFontFamily</i>	The standard font family.
---------------------------	---------------------------

Definition at line 457 of file Font.cs.

6.13.4 Member Data Documentation

6.13.4.1 StandardFamilies

```
string [] VectSharp.FontFamily.StandardFamilies = new string[] { "Times-Roman", "Times-Bold",
"Times-Italic", "Times-BoldItalic", "Helvetica", "Helvetica-Bold", "Helvetica-Oblique", "Helvetica-Bold↵
Oblique", "Courier", "Courier-Bold", "Courier-Oblique", "Courier-BoldOblique", "Symbol", "Zapf↵
Dingbats" } [static]
```

The names of the 14 standard families that are guaranteed to be displayed correctly.

Definition at line 262 of file Font.cs.

6.13.4.2 StandardFontFamilyResources

```
string [] VectSharp.FontFamily.StandardFontFamilyResources [static]
```

Initial value:

```
= new string[]
{
    "VectSharp.StandardFonts.NimbusRomNo9L-Reg.ttf",
    "VectSharp.StandardFonts.NimbusRomNo9L-Med.ttf", "VectSharp.StandardFonts.NimbusRomNo9L-RegIta.ttf",
    "VectSharp.StandardFonts.NimbusRomNo9L-MedIta.ttf",
    "VectSharp.StandardFonts.NimbusSanL-Reg.ttf", "VectSharp.StandardFonts.NimbusSanL-Bol.ttf",
    "VectSharp.StandardFonts.NimbusSanL-RegIta.ttf", "VectSharp.StandardFonts.NimbusSanL-BolIta.ttf",
    "VectSharp.StandardFonts.NimbusMono-Regular.ttf", "VectSharp.StandardFonts.NimbusMono-Bold.ttf",
    "VectSharp.StandardFonts.NimbusMono-Oblique.ttf",
    "VectSharp.StandardFonts.NimbusMono-BoldOblique.ttf",
    "VectSharp.StandardFonts.StandardSymbolsPS.ttf", "VectSharp.StandardFonts.D050000L.ttf"
}
```

The names of the resource streams pointing to the included TrueType font files for each of the standard 14 font families.

Definition at line 267 of file Font.cs.

6.13.5 Property Documentation

6.13.5.1 FileName

```
string VectSharp.FontFamily.FileName [get]
```

Full path to the TrueType font file for this font family (or, if this is a standard font family, name of the font family).

Definition at line 359 of file Font.cs.

6.13.5.2 IsBold

```
bool VectSharp.FontFamily.IsBold [get]
```

Whether this font is bold or not. This is set based on the information included in the OS/2 table of the TrueType file.

Definition at line 370 of file Font.cs.

6.13.5.3 IsItalic

```
bool VectSharp.FontFamily.IsItalic [get]
```

Whether this font is italic or oblique or not. This is set based on the information included in the OS/2 table of the TrueType file.

Definition at line 375 of file Font.cs.

6.13.5.4 IsOblique

```
bool VectSharp.FontFamily.IsOblique [get]
```

Whether this font is oblique or not. This is set based on the information included in the OS/2 table of the TrueType file.

Definition at line 380 of file Font.cs.

6.13.5.5 IsStandardFamily

```
bool VectSharp.FontFamily.IsStandardFamily [get]
```

Whether this is one of the 14 standard font families or not.

Definition at line 278 of file Font.cs.

6.13.5.6 TrueTypeFile

```
TrueTypeFile VectSharp.FontFamily.TrueTypeFile [get]
```

Parsed TrueType font file for this font family. See also:

The documentation for this class was generated from the following file:

- VectSharp/Font.cs

6.14 VectSharp.Markdown.FormattedString Struct Reference

Represents a string with associated formatting information.

Public Member Functions

- [FormattedString](#) (string text, [Colour](#) colour, bool isBold, bool isItalic)
Creates a new [FormattedString](#) instance.

Properties

- string [Text](#) [get]
The text represented by this object.
- [Colour](#) [Colour](#) [get]
The colour of the text.
- bool [IsBold](#) [get]
Whether the text should be rendered as bold or not.
- bool [IsItalic](#) [get]
Whether the text should be rendered as italic or not.

6.14.1 Detailed Description

Represents a string with associated formatting information.

Definition at line 15 of file SyntaxHighlighting.cs.

6.14.2 Constructor & Destructor Documentation

6.14.2.1 FormattedString()

```
VectSharp.Markdown.FormattedString.FormattedString (
    string text,
    Colour colour,
    bool isBold,
    bool isItalic )
```

Creates a new [FormattedString](#) instance.

Parameters

<i>text</i>	The text of the object.
<i>colour</i>	The colour of the text.
<i>isBold</i>	Whether the text should be rendered as bold or not.
<i>isItalic</i>	Whether the text should be rendered as italic or not.

Definition at line 44 of file SyntaxHighlighting.cs.

6.14.3 Property Documentation

6.14.3.1 Colour

```
Colour VectSharp.Markdown.FormattedString.Colour [get]
```

The colour of the text.

Definition at line 25 of file SyntaxHighlighting.cs.

6.14.3.2 IsBold

```
bool VectSharp.Markdown.FormattedString.IsBold [get]
```

Whether the text should be rendered as bold or not.

Definition at line 30 of file SyntaxHighlighting.cs.

6.14.3.3 IsItalic

```
bool VectSharp.Markdown.FormattedString.IsItalic [get]
```

Whether the text should be rendered as italic or not.

Definition at line 35 of file SyntaxHighlighting.cs.

6.14.3.4 Text

```
string VectSharp.Markdown.FormattedString.Text [get]
```

The text represented by this object.

Definition at line 20 of file SyntaxHighlighting.cs.

The documentation for this struct was generated from the following file:

- VectSharp.Markdown/SyntaxHighlighting.cs

6.15 VectSharp.FormattedText Class Reference

Represents a run of text that should be drawn with the same style.

Public Member Functions

- [FormattedText](#) (string text, [Font](#) font, [Script](#) script=[Script.Normal](#), [Brush](#) brush=null)
Creates a new [FormattedText](#) instance with the specified text , font , script position and brush .

Static Public Member Functions

- static IEnumerable< [FormattedText](#) > [Format](#) (string text, [Font](#) normalFont, [Font](#) boldFont, [Font](#) italicFont, [Font](#) boldItalicFont, [Brush](#) defaultBrush=null)
Parse the formatting information contained in a text string into a collection of [FormattedText](#) objects.
- static IEnumerable< [FormattedText](#) > [Format](#) (string text, [FontFamily.StandardFontFamilies](#) fontFamily, double fontSize, [Brush](#) defaultBrush=null)
Parse the formatting information contained in a text string into a collection of [FormattedText](#) objects, using fonts from a standard font family.

Properties

- string [Text](#) [get]
Represents the text represented by this instance.
- [Font](#) [Font](#) [get]
Represents the font that should be used to draw the text.
- [Script](#) [Script](#) [get]
Represents the position of the text.
- [Brush](#) [Brush](#) [get]
Represents the brush that should be used to draw the text. If this is null, the default brush is used.

6.15.1 Detailed Description

Represents a run of text that should be drawn with the same style.

Definition at line 33 of file FormattedText.cs.

6.15.2 Constructor & Destructor Documentation

6.15.2.1 FormattedText()

```
VectSharp.FormattedText.FormattedText (
    string text,
    Font font,
    Script script = Script.Normal,
    Brush brush = null )
```

Creates a new [FormattedText](#) instance with the specified *text* , *font* , *script* position and *brush* .

Parameters

<i>text</i>	The text that will be contained in the new FormattedText .
<i>font</i>	The font that will be used by the new FormattedText .
<i>script</i>	The script position of the new FormattedText .
<i>brush</i>	The brush that will be used by the new FormattedText .

Definition at line 62 of file FormattedText.cs.

6.15.3 Member Function Documentation

6.15.3.1 Format() [1/2]

```
static IEnumerable<FormattedText> VectSharp.FormattedText.Format (
    string text,
    Font normalFont,
    Font boldFont,
    Font italicFont,
    Font boldItalicFont,
    Brush defaultBrush = null ) [static]
```

Parse the formatting information contained in a text string into a collection of [FormattedText](#) objects.

Parameters

<i>text</i>	The string containing formatting information. Format information is specified using HTML-like tags: <ul style="list-style-type: none"> • <code></code> or <code></code> are used for bold text; • <code><i></i></code> or <code></code> are used for text in italics; • <code><sup></sup></code> and <code><sub></sub></code> are used, respectively, for superscript and subscript text; • <code><#COLOUR></#></code> is used to specify the colour of the text, where COLOUR is a CSS colour string (e.g. <code><#red></code>, <code><#0080FF></code>, or <code><#rgba(128, 80, 52, 0.5)></code>).
<i>normalFont</i>	The font that will be used for text that is neither bold nor italic.
<i>boldFont</i>	The font that will be used for text that is bold. Note that this does not necessarily have to be a bold font; this is just the font that is applied to text contained within <code></code> tags.
<i>italicFont</i>	The font that will be used for text that is in italics. Note that this does not necessarily have to be an italic font; this is just the font that is applied to text contained within <code><i></i></code> tags.
<i>boldItalicFont</i>	The font that will be used for text that is both in bold and in italics.
<i>defaultBrush</i>	The default Brush that will be used for text runs that do not specify a colour. If this is <code>null</code> , the default Brush will be the one specified in the painting call.

Returns

A lazy collection of [FormattedText](#) objects. Note that every enumeration of this collection causes the text to be parsed again; if you need to enumerate this collection more than once, you should probably convert it e.g. to a `List<T>`.

Definition at line 87 of file `FormattedText.cs`.

6.15.3.2 Format() [2/2]

```
static IEnumerable<FormattedText> VectSharp.FormattedText.Format (
    string text,
    FontFamily.StandardFontFamilies fontFamily,
    double fontSize,
    Brush defaultBrush = null ) [static]
```

Parse the formatting information contained in a text string into a collection of [FormattedText](#) objects, using fonts from a standard font family.

Parameters

<i>text</i>	<p>The string containing formatting information. Format information is specified using HTML-like tags:</p> <ul style="list-style-type: none"> • <code></code> or <code></code> are used for bold text; • <code><i></i></code> or <code></code> are used for text in italics; • <code><sup></sup></code> and <code><sub></sub></code> are used, respectively, for superscript and subscript text; • <code><#COLOUR></#></code> is used to specify the colour of the text, where <code>COLOUR</code> is a CSS colour string (e.g. <code><#red></code>, <code><#0080FF></code>, or <code><#rgba(128, 80, 52, 0.5)></code>).
<i>fontFamily</i>	The font family from which the fonts will be created. If this is a regular font family, the bold, italic and bold-italic versions of the font will be used for the formatted text. Otherwise, the relevant font styles will be toggled (e.g. if the supplied font family is bold, then regular text in the formatted string will be displayed as bold, while bold text in the formatted string will be displayed as regular text).
<i>fontSize</i>	The size of the fonts to use.
<i>defaultBrush</i>	The default Brush that will be used for text runs that do not specify a colour. If this is <code>null</code> , the default Brush will be the one specified in the painting call.

Returns

A lazy collection of [FormattedText](#) objects. Note that every enumeration of this collection causes the text to be parsed again; if you need to enumerate this collection more than once, you should probably convert it e.g. to a `List<T>`.

Definition at line 242 of file `FormattedText.cs`.

6.15.4 Property Documentation

6.15.4.1 Brush

[Brush](#) `VectSharp.FormattedText.Brush` [get]

Represents the brush that should be used to draw the text. If this is null, the default brush is used.

Definition at line 53 of file `FormattedText.cs`.

6.15.4.2 Font

[Font](#) `VectSharp.FormattedText.Font` [get]

Represents the font that should be used to draw the text.

Definition at line 43 of file `FormattedText.cs`.

6.15.4.3 Script

`Script` VectSharp.FormattedText.Script [get]

Represents the position of the text.

Definition at line 48 of file FormattedText.cs.

6.15.4.4 Text

`string` VectSharp.FormattedText.Text [get]

Represents the text represented by this instance.

Definition at line 38 of file FormattedText.cs.

The documentation for this class was generated from the following file:

- VectSharp/FormattedText.cs

6.16 VectSharp.FormattedTextExtensions Class Reference

Contains extension methods for collections of [FormattedText](#) objects.

Static Public Member Functions

- static [Font.DetailedFontMetrics Measure](#) (this IEnumerable< [FormattedText](#) > text)
Measures a collection of [FormattedText](#) objects.

6.16.1 Detailed Description

Contains extension methods for collections of [FormattedText](#) objects.

Definition at line 460 of file FormattedText.cs.

6.16.2 Member Function Documentation

6.16.2.1 Measure()

```
static Font.DetailedFontMetrics VectSharp.FormattedTextExtensions.Measure (  
    this IEnumerable< FormattedText > text ) [static]
```

Measures a collection of [FormattedText](#) objects.

Parameters

<i>text</i>	The collection of FormattedText objects to be measured.
-------------	---

Returns

A [Font.DetailedFontMetrics](#) containing detailed measurements for the text obtained by composing the elements in the [FormattedText](#) collection.

Definition at line 544 of file FormattedText.cs.

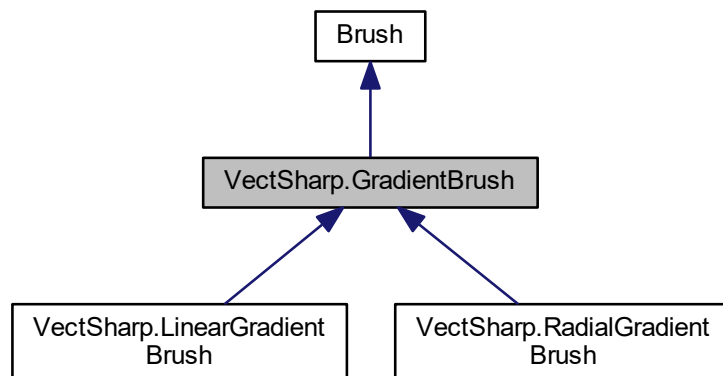

The documentation for this class was generated from the following file:

- VectSharp/FormattedText.cs

6.17 VectSharp.GradientBrush Class Reference

Represents a brush painting with a gradient.

Inheritance diagram for VectSharp.GradientBrush:

Properties

- [GradientStops GradientStops](#) [get]
The colour stops in the gradient.

Additional Inherited Members

6.17.1 Detailed Description

Represents a brush painting with a gradient.

Definition at line 214 of file Brush.cs.

6.17.2 Property Documentation

6.17.2.1 GradientStops

`GradientStops` VectSharp.GradientBrush.GradientStops [get]

The colour stops in the gradient.

Definition at line 219 of file Brush.cs.

The documentation for this class was generated from the following file:

- VectSharp/Brush.cs

6.18 VectSharp.GradientStop Struct Reference

Represents a colour stop in a gradient.

Public Member Functions

- `GradientStop` (`Colour` colour, double offset)
Creates a new `GradientStop` instance.
- `GradientStop MultiplyOpacity` (double opacity)
Returns a `GradientStop` corresponding to the current instance, whose colour's opacity has been multiplied by the specified value.

Properties

- `Colour` `Colour` [get]
The `Colour` at the gradient stop.
- double `Offset` [get]
The offset of the gradient stop. Range: [0, 1].

6.18.1 Detailed Description

Represents a colour stop in a gradient.

Definition at line 92 of file Brush.cs.

6.18.2 Constructor & Destructor Documentation

6.18.2.1 GradientStop()

```
VectSharp.GradientStop.GradientStop (
    Colour colour,
    double offset )
```

Creates a new `GradientStop` instance.

Parameters

<i>colour</i>	The Colour at the gradient stop.
<i>offset</i>	The offset of the gradient stop. Range: [0, 1].

Definition at line 109 of file Brush.cs.

6.18.3 Member Function Documentation

6.18.3.1 MultiplyOpacity()

```
GradientStop VectSharp.GradientStop.MultiplyOpacity (
    double opacity )
```

Returns a [GradientStop](#) corresponding to the current instance, whose colour's opacity has been multiplied by the specified value.

Parameters

<i>opacity</i>	The value that will be used to multiply the colour's opacity.
----------------	---

Returns

A [GradientStop](#) corresponding to the current instance, whose colour's opacity has been multiplied by the specified value.

Definition at line 120 of file Brush.cs.

6.18.4 Property Documentation

6.18.4.1 Colour

```
Colour VectSharp.GradientStop.Colour [get]
```

The [Colour](#) at the gradient stop.

Definition at line 97 of file Brush.cs.

6.18.4.2 Offset

```
double VectSharp.GradientStop.Offset [get]
```

The offset of the gradient stop. Range: [0, 1].

Definition at line 102 of file Brush.cs.

The documentation for this struct was generated from the following file:

- VectSharp/Brush.cs

6.19 VectSharp.GradientStops Class Reference

Represents a read-only list of [GradientStops](#).

Inheritance diagram for VectSharp.GradientStops:

Public Member Functions

- `IEnumerator< GradientStop > GetEnumerator ()`
- `GradientStops (IEnumerable< GradientStop > gradientStops)`
Creates a new [GradientStops](#) instance containing the specified gradient stops.
- `GradientStops (params GradientStop[] gradientStops)`
Creates a new [GradientStops](#) instance containing the specified gradient stops.

Public Attributes

- `GradientStop this[int index] => gradientStops[index]`
- `int Count => gradientStops.Count`

Static Public Attributes

- static readonly double `StopTolerance` = 1e-7
The minimum distance that is enforced between consecutive gradient stops.

6.19.1 Detailed Description

Represents a read-only list of [GradientStops](#).

Definition at line 129 of file Brush.cs.

6.19.2 Constructor & Destructor Documentation

6.19.2.1 GradientStops() [1/2]

```
VectSharp.GradientStops.GradientStops (
    IEnumerable< GradientStop > gradientStops )
```

Creates a new [GradientStops](#) instance containing the specified gradient stops.

Parameters

<i>gradientStops</i>	The gradient stops that will be contained in the GradientStops object.
----------------------	--

Definition at line 159 of file Brush.cs.

6.19.2.2 GradientStops() [2/2]

```
VectSharp.GradientStops.GradientStops (
    params GradientStop[] gradientStops )
```

Creates a new [GradientStops](#) instance containing the specified gradient stops.

Parameters

<i>gradientStops</i>	The gradient stops that will be contained in the GradientStops object.
----------------------	--

Definition at line 205 of file Brush.cs.

6.19.3 Member Data Documentation

6.19.3.1 StopTolerance

```
readonly double VectSharp.GradientStops.StopTolerance = 1e-7 [static]
```

The minimum distance that is enforced between consecutive gradient stops.

Definition at line 134 of file Brush.cs.

The documentation for this class was generated from the following file:

- VectSharp/Brush.cs

6.20 VectSharp.Graphics Class Reference

Represents an abstract drawing surface.

Public Member Functions

- void [FillPath](#) ([GraphicsPath](#) path, [Brush](#) fillColour, string tag=null)
Fill a [GraphicsPath](#).
- void [StrokePath](#) ([GraphicsPath](#) path, [Brush](#) strokeColour, double lineWidth=1, [LineCaps](#) lineCap=[LineCaps.Butt](#), [LineJoins](#) lineJoin=[LineJoins.Miter](#), [LineDash](#)? lineDash=null, string tag=null)
Stroke a [GraphicsPath](#).
- void [SetClippingPath](#) ([GraphicsPath](#) path)
Intersect the current clipping path with the specified [GraphicsPath](#).
- void [SetClippingPath](#) (double leftX, double topY, double width, double height)
Intersect the current clipping path with the specified rectangle.
- void [SetClippingPath](#) ([Point](#) topLeft, [Size](#) size)
Intersect the current clipping path with the specified rectangle.
- void [Rotate](#) (double angle)
Rotate the coordinate system around the origin.
- void [RotateAt](#) (double angle, [Point](#) pivot)
Rotate the coordinate system around a pivot point.
- void [Transform](#) (double a, double b, double c, double d, double e, double f)
Transform the coordinate system with the specified transformation matrix $\begin{bmatrix} a & c & e \\ b & d & f \\ 0 & 0 & 1 \end{bmatrix}$.
- void [Translate](#) (double x, double y)
Translate the coordinate system origin.
- void [Translate](#) ([Point](#) delta)
Translate the coordinate system origin.
- void [Scale](#) (double scaleX, double scaleY)
Scale the coordinate system with respect to the origin.
- void [FillRectangle](#) ([Point](#) topLeft, [Size](#) size, [Brush](#) fillColour, string tag=null)
Fill a rectangle.
- void [FillRectangle](#) (double leftX, double topY, double width, double height, [Brush](#) fillColour, string tag=null)
Fill a rectangle.
- void [StrokeRectangle](#) ([Point](#) topLeft, [Size](#) size, [Brush](#) strokeColour, double lineWidth=1, [LineCaps](#) lineCap=[LineCaps.Butt](#), [LineJoins](#) lineJoin=[LineJoins.Miter](#), [LineDash](#)? lineDash=null, string tag=null)
Stroke a rectangle.
- void [StrokeRectangle](#) (double leftX, double topY, double width, double height, [Brush](#) strokeColour, double lineWidth=1, [LineCaps](#) lineCap=[LineCaps.Butt](#), [LineJoins](#) lineJoin=[LineJoins.Miter](#), [LineDash](#)? lineDash=null, string tag=null)
Stroke a rectangle.

- void [DrawRasterImage](#) (int sourceX, int sourceY, int sourceWidth, int sourceHeight, double destinationX, double destinationY, double destinationWidth, double destinationHeight, [RasterImage](#) image, string tag=null)
Draw a raster image.
- void [DrawRasterImage](#) (double x, double y, [RasterImage](#) image, string tag=null)
Draw a raster image.
- void [DrawRasterImage](#) ([Point](#) position, [RasterImage](#) image, string tag=null)
Draw a raster image.
- void [DrawRasterImage](#) (double x, double y, double width, double height, [RasterImage](#) image, string tag=null)
Draw a raster image.
- void [DrawRasterImage](#) ([Point](#) position, [Size](#) size, [RasterImage](#) image, string tag=null)
Draw a raster image.
- void [Save](#) ()
Save the current transform state (rotation, translation, scale).
- void [Restore](#) ()
Restore the previous transform state (rotation, translation scale).
- void [CopyToGraphicsContext](#) ([IGraphicsContext](#) destinationContext)
Copy the current graphics to an instance of a class implementing [IGraphicsContext](#).
- void [DrawGraphics](#) ([Point](#) origin, [Graphics](#) graphics)
Draws a [Graphics](#) object on the current [Graphics](#) object.
- void [DrawGraphics](#) (double originX, double originY, [Graphics](#) graphics)
Draws a [Graphics](#) object on the current [Graphics](#) object.
- [Graphics Transform](#) (Func< [Point](#), [Point](#) > transformationFunction, double linearisationResolution)
Creates a new [Graphics](#) object in which all the graphics actions have been transformed using an arbitrary transformation function. [Raster](#) images are replaced by grey rectangles.
- [Graphics Linearise](#) (double resolution)
Creates a new [Graphics](#) object by linearising all of the elements of the current instance, i.e. replacing curve segments with series of line segments that approximate them. [Raster](#) images are left unchanged.
- void [FillText](#) ([Point](#) origin, string text, [Font](#) font, [Brush](#) fillColour, [TextBaselines](#) textBaseline=[TextBaselines.Top](#), string tag=null)
Fill a text string.
- void [FillText](#) (double originX, double originY, string text, [Font](#) font, [Brush](#) fillColour, [TextBaselines](#) text↵Baseline=[TextBaselines.Top](#), string tag=null)
Fill a text string.
- void [StrokeText](#) ([Point](#) origin, string text, [Font](#) font, [Brush](#) strokeColour, [TextBaselines](#) textBaseline=[TextBaselines.Top](#), double lineWidth=1, [LineCaps](#) lineCap=[LineCaps.Butt](#), [LineJoins](#) lineJoin=[LineJoins.Miter](#), [LineDash?](#) line↵Dash=null, string tag=null)
Stroke a text string.
- void [StrokeText](#) (double originX, double originY, string text, [Font](#) font, [Brush](#) strokeColour, [TextBaselines](#) textBaseline=[TextBaselines.Top](#), double lineWidth=1, [LineCaps](#) lineCap=[LineCaps.Butt](#), [LineJoins](#) line↵Join=[LineJoins.Miter](#), [LineDash?](#) lineDash=null, string tag=null)
Stroke a text string.
- void [FillTextOnPath](#) ([GraphicsPath](#) path, string text, [Font](#) font, [Brush](#) fillColour, double reference=0, [TextAnchors](#) anchor=[TextAnchors.Left](#), [TextBaselines](#) textBaseline=[TextBaselines.Top](#), string tag=null)
Fill a text string along a [GraphicsPath](#).
- void [StrokeTextOnPath](#) ([GraphicsPath](#) path, string text, [Font](#) font, [Brush](#) strokeColour, double reference=0, [TextAnchors](#) anchor=[TextAnchors.Left](#), [TextBaselines](#) textBaseline=[TextBaselines.Top](#), double lineWidth=1, [LineCaps](#) lineCap=[LineCaps.Butt](#), [LineJoins](#) lineJoin=[LineJoins.Miter](#), [LineDash?](#) lineDash=null, string tag=null)
Stroke a text string along a [GraphicsPath](#).
- void [FillText](#) ([Point](#) origin, IEnumerable< [FormattedText](#) > text, [Brush](#) fillColour, [TextBaselines](#) text↵Baseline=[TextBaselines.Top](#), string tag=null)
Fill a formatted text string.

- void [FillText](#) (double originX, double originY, IEnumerable< [FormattedText](#) > text, [Brush](#) fillColour, [TextBaselines](#) textBaseline=[TextBaselines.Top](#), string tag=null)
Fill a formatted text string.
- void [StrokeText](#) ([Point](#) origin, IEnumerable< [FormattedText](#) > text, [Brush](#) strokeColour, [TextBaselines](#) textBaseline=[TextBaselines.Top](#), double lineWidth=1, [LineCaps](#) lineCap=[LineCaps.Butt](#), [LineJoins](#) lineJoin=[LineJoins.Miter](#), [LineDash?](#) lineDash=null, string tag=null)
Stroke a formatted text string.
- void [StrokeText](#) (double originX, double originY, IEnumerable< [FormattedText](#) > text, [Brush](#) strokeColour, [TextBaselines](#) textBaseline=[TextBaselines.Top](#), double lineWidth=1, [LineCaps](#) lineCap=[LineCaps.Butt](#), [LineJoins](#) lineJoin=[LineJoins.Miter](#), [LineDash?](#) lineDash=null, string tag=null)
Stroke a formatted text string.
- [Size MeasureText](#) (string text, [Font](#) font)
Measure a text string. See also
See also
[Font.MeasureText\(string\)](#), [Font.MeasureTextAdvanced\(string\)](#)
and .
- [Size MeasureText](#) (IEnumerable< [FormattedText](#) > text)
Measure a formatted text string. See also
See also
[FormattedTextExtensions.Measure\(IEnumerable<FormattedText>\)](#)

Properties

- static [UnbalancedStackActions](#) [UnbalancedStackAction](#) = [UnbalancedStackActions.Throw](#) [get, set]
Determines how an unbalanced graphics state stack (which occurs if the number of calls to [Save](#) and [Restore](#) is not equal) will be treated. The default is [UnbalancedStackActions.Throw](#).

6.20.1 Detailed Description

Represents an abstract drawing surface.

Definition at line 253 of file Graphics.cs.

6.20.2 Member Function Documentation

6.20.2.1 CopyToIGraphicsContext()

```
void VectSharp.Graphics.CopyToIGraphicsContext (
    IGraphicsContext destinationContext )
```

Copy the current graphics to an instance of a class implementing [IGraphicsContext](#).

Parameters

<i>destinationContext</i>	The IGraphicsContext on which the graphics are to be copied.
---------------------------	--

Definition at line 591 of file Graphics.cs.

6.20.2.2 DrawGraphics() [1/2]

```
void VectSharp.Graphics.DrawGraphics (
    double originX,
    double originY,
    Graphics graphics )
```

Draws a [Graphics](#) object on the current [Graphics](#) object.

Parameters

<i>originX</i>	The horizontal coordinate at which to place the origin of <i>graphics</i> .
<i>originY</i>	The vertical coordinate at which to place the origin of <i>graphics</i> .
<i>graphics</i>	The Graphics object to draw on the current Graphics object.

Definition at line 807 of file Graphics.cs.

6.20.2.3 DrawGraphics() [2/2]

```
void VectSharp.Graphics.DrawGraphics (
    Point origin,
    Graphics graphics )
```

Draws a [Graphics](#) object on the current [Graphics](#) object.

Parameters

<i>origin</i>	The point at which to place the origin of <i>graphics</i> .
<i>graphics</i>	The Graphics object to draw on the current Graphics object.

Definition at line 789 of file Graphics.cs.

6.20.2.4 DrawRasterImage() [1/5]

```
void VectSharp.Graphics.DrawRasterImage (
    double x,
    double y,
    double width,
    double height,
    RasterImage image,
    string tag = null )
```

Draw a raster image.

Parameters

<i>x</i>	The horizontal coordinate of the top-left corner of the rectangle delimiting the destination area of the image.
<i>y</i>	The vertical coordinate of the top-left corner of the rectangle delimiting the destination area of the image.
<i>width</i>	The width of the rectangle delimiting the destination area of the image.
<i>height</i>	The height of the rectangle delimiting the destination area of the image.
<i>image</i>	The image to draw.
<i>tag</i>	A tag to identify the drawn image.

Definition at line 496 of file Graphics.cs.

6.20.2.5 DrawRasterImage() [2/5]

```
void VectSharp.Graphics.DrawRasterImage (
    double x,
    double y,
    RasterImage image,
    string tag = null )
```

Draw a raster image.

Parameters

<i>x</i>	The horizontal coordinate of the top-left corner of the rectangle delimiting the destination area of the image.
<i>y</i>	The vertical coordinate of the top-left corner of the rectangle delimiting the destination area of the image.
<i>image</i>	The image to draw.
<i>tag</i>	A tag to identify the drawn image.

Definition at line 471 of file Graphics.cs.

6.20.2.6 DrawRasterImage() [3/5]

```
void VectSharp.Graphics.DrawRasterImage (
    int sourceX,
    int sourceY,
    int sourceWidth,
    int sourceHeight,
    double destinationX,
    double destinationY,
    double destinationWidth,
    double destinationHeight,
```

```
    RasterImage image,  
    string tag = null )
```

Draw a raster image.

Parameters

<i>sourceX</i>	The horizontal coordinate of the top-left corner of the rectangle delimiting the source area of the image.
<i>sourceY</i>	The vertical coordinate of the top-left corner of the rectangle delimiting the source area of the image.
<i>sourceWidth</i>	The width of the rectangle delimiting the source area of the image.
<i>sourceHeight</i>	The height of the rectangle delimiting the source area of the image.
<i>destinationX</i>	The horizontal coordinate of the top-left corner of the rectangle delimiting the destination area of the image.
<i>destinationY</i>	The vertical coordinate of the top-left corner of the rectangle delimiting the destination area of the image.
<i>destinationWidth</i>	The width of the rectangle delimiting the destination area of the image.
<i>destinationHeight</i>	The height of the rectangle delimiting the destination area of the image.
<i>image</i>	The image to draw.
<i>tag</i>	A tag to identify the drawn image.

Definition at line 459 of file Graphics.cs.

6.20.2.7 DrawRasterImage() [4/5]

```
void VectSharp.Graphics.DrawRasterImage (
    Point position,
    RasterImage image,
    string tag = null )
```

Draw a raster image.

Parameters

<i>position</i>	The the top-left corner of the rectangle delimiting the destination area of the image.
<i>image</i>	The image to draw.
<i>tag</i>	A tag to identify the drawn image.

Definition at line 482 of file Graphics.cs.

6.20.2.8 DrawRasterImage() [5/5]

```
void VectSharp.Graphics.DrawRasterImage (
    Point position,
    Size size,
    RasterImage image,
    string tag = null )
```

Draw a raster image.

Parameters

<i>position</i>	The the top-left corner of the rectangle delimiting the destination area of the image.
<i>size</i>	The size of the rectangle delimiting the destination area of the image.
<i>image</i>	The image to draw.
<i>tag</i>	A tag to identify the drawn image.

Definition at line 508 of file Graphics.cs.

6.20.2.9 FillPath()

```
void VectSharp.Graphics.FillPath (
    GraphicsPath path,
    Brush fillColour,
    string tag = null )
```

Fill a [GraphicsPath](#).

Parameters

<i>path</i>	The GraphicsPath to fill.
<i>fillColour</i>	The Brush with which to fill the GraphicsPath .
<i>tag</i>	A tag to identify the filled path.

Definition at line 268 of file Graphics.cs.

6.20.2.10 FillRectangle() [1/2]

```
void VectSharp.Graphics.FillRectangle (
    double leftX,
    double topY,
    double width,
    double height,
    Brush fillColour,
    string tag = null )
```

Fill a rectangle.

Parameters

<i>leftX</i>	The horizontal coordinate of the top-left corner of the rectangle.
<i>topY</i>	The vertical coordinate of the top-left corner of the rectangle.
<i>width</i>	The width of the rectangle.
<i>height</i>	The height of the rectangle.
<i>fillColour</i>	The colour with which to fill the rectangle.
<i>tag</i>	A tag to identify the filled rectangle.

Definition at line 407 of file Graphics.cs.

6.20.2.11 FillRectangle() [2/2]

```
void VectSharp.Graphics.FillRectangle (
    Point topLeft,
    Size size,
    Brush fillColour,
    string tag = null )
```

Fill a rectangle.

Parameters

<i>topLeft</i>	The top-left corner of the rectangle.
<i>size</i>	The size of the rectangle.
<i>fillColour</i>	The colour with which to fill the rectangle.
<i>tag</i>	A tag to identify the filled rectangle.

Definition at line 393 of file Graphics.cs.

6.20.2.12 FillText() [1/4]

```
void VectSharp.Graphics.FillText (
    double originX,
    double originY,
    IEnumerable< FormattedText > text,
    Brush fillColour,
    TextBaselines textBaseline = TextBaselines.Top,
    string tag = null )
```

Fill a formatted text string.

Parameters

<i>originX</i>	The horizontal coordinate of the text origin.
<i>originY</i>	The vertical coordinate of the text origin. See <i>textBaseline</i> .
<i>text</i>	The FormattedText to draw.
<i>fillColour</i>	The default Brush to use to fill the text. This can be overridden by each <i>text</i> element.
<i>textBaseline</i>	The text baseline (determines what <i>originY</i> represents).
<i>tag</i>	A tag to identify the filled text.

Definition at line 386 of file Graphics.Text.cs.

6.20.2.13 FillText() [2/4]

```
void VectSharp.Graphics.FillText (
    double originX,
    double originY,
    string text,
    Font font,
    Brush fillColour,
    TextBaselines textBaseline = TextBaselines.Top,
    string tag = null )
```

Fill a text string.

Parameters

<i>originX</i>	The horizontal coordinate of the text origin.
<i>originY</i>	The vertical coordinate of the text origin. See <i>textBaseline</i> .
<i>text</i>	The string to draw.
<i>font</i>	The font with which to draw the text.
<i>fillColour</i>	The Brush to use to fill the text.
<i>textBaseline</i>	The text baseline (determines what <i>originY</i> represents).
<i>tag</i>	A tag to identify the filled text.

Definition at line 35 of file Graphics.Text.cs.

6.20.2.14 FillText() [3/4]

```
void VectSharp.Graphics.FillText (
    Point origin,
    IEnumerable< FormattedText > text,
    Brush fillColour,
    TextBaselines textBaseline = TextBaselines.Top,
    string tag = null )
```

Fill a formatted text string.

Parameters

<i>origin</i>	The text origin. See <i>textBaseline</i> .
<i>text</i>	The FormattedText to draw.
<i>fillColour</i>	The default Brush to use to fill the text. This can be overridden by each <i>text</i> element.
<i>textBaseline</i>	The text baseline (determines what the vertical component of <i>origin</i> represents).
<i>tag</i>	A tag to identify the filled text.

Definition at line 293 of file Graphics.Text.cs.

6.20.2.15 FillText() [4/4]

```
void VectSharp.Graphics.FillText (
    Point origin,
    string text,
    Font font,
    Brush fillColour,
    TextBaselines textBaseline = TextBaselines.Top,
    string tag = null )
```

Fill a text string.

Parameters

<i>origin</i>	The text origin. See <i>textBaseline</i> .
<i>text</i>	The string to draw.
<i>font</i>	The font with which to draw the text.
<i>fillColour</i>	The Brush to use to fill the text.
<i>textBaseline</i>	The text baseline (determines what the vertical component of <i>origin</i> represents).
<i>tag</i>	A tag to identify the filled text.

Definition at line 20 of file Graphics.Text.cs.

6.20.2.16 FillTextOnPath()

```
void VectSharp.Graphics.FillTextOnPath (
    GraphicsPath path,
    string text,
    Font font,
    Brush fillColour,
    double reference = 0,
    TextAnchors anchor = TextAnchors.Left,
    TextBaselines textBaseline = TextBaselines.Top,
    string tag = null )
```

Fill a text string along a [GraphicsPath](#).

Parameters

<i>path</i>	The GraphicsPath along which the text will flow.
<i>text</i>	The string to draw.
<i>font</i>	The font with which to draw the text.
<i>fillColour</i>	The Brush to use to fill the text.
<i>reference</i>	The (relative) starting point on the path starting from which the text should be drawn (0 is the start of the path, 1 is the end of the path).
<i>anchor</i>	The anchor in the text string that will correspond to the point specified by the <i>reference</i> .
<i>textBaseline</i>	The text baseline (determines which the position of the text in relation to the <i>path</i> .
<i>tag</i>	A tag to identify the filled text.

Definition at line 88 of file Graphics.Text.cs.

6.20.2.17 Linearise()

```
Graphics VectSharp.Graphics.Linearise (
    double resolution )
```

Creates a new [Graphics](#) object by linearising all of the elements of the current instance, i.e. replacing curve segments with series of line segments that approximate them. [Raster](#) images are left unchanged.

Parameters

<i>resolution</i>	The resolution that will be used to linearise curve segments.
-------------------	---

Returns

A new [Graphics](#) object containing the linearised elements.

Definition at line 1010 of file Graphics.cs.

6.20.2.18 MeasureText() [1/2]

```
Size VectSharp.Graphics.MeasureText (
    IEnumerable< FormattedText > text )
```

Measure a formatted text string. See also

See also

[FormattedTextExtensions.Measure\(IEnumerable<FormattedText>\)](#)

.

Parameters

<i>text</i>	The collection of FormattedText objects to measure.
-------------	---

Returns

The size of the measured *text* .

Definition at line 523 of file Graphics.Text.cs.

6.20.2.19 MeasureText() [2/2]

```
Size VectSharp.Graphics.MeasureText (
    string text,
    Font font )
```

Measure a text string. See also

See also

[Font.MeasureText\(string\)](#), [Font.MeasureTextAdvanced\(string\)](#)

and .

Parameters

<i>text</i>	The string to measure.
<i>font</i>	The font to use to measure the string.

Returns

The size of the measured *text* .

Definition at line 512 of file Graphics.Text.cs.

6.20.2.20 Restore()

```
void VectSharp.Graphics.Restore ( )
```

Restore the previous transform state (rotation, translation scale).

Definition at line 524 of file Graphics.cs.

6.20.2.21 Rotate()

```
void VectSharp.Graphics.Rotate (
    double angle )
```

Rotate the coordinate system around the origin.

Parameters

<i>angle</i>	The angle (in radians) by which to rotate the coordinate system.
--------------	--

Definition at line 324 of file Graphics.cs.

6.20.2.22 RotateAt()

```
void VectSharp.Graphics.RotateAt (
    double angle,
    Point pivot )
```

Rotate the coordinate system around a pivot point.

Parameters

<i>angle</i>	The angle (in radians) by which to rotate the coordinate system.
<i>pivot</i>	The pivot around which the coordinate system is to be rotated.

Definition at line 334 of file Graphics.cs.

6.20.2.23 Save()

```
void VectSharp.Graphics.Save ( )
```

Save the current transform state (rotation, translation, scale).

Definition at line 516 of file Graphics.cs.

6.20.2.24 Scale()

```
void VectSharp.Graphics.Scale (
    double scaleX,
    double scaleY )
```

Scale the coordinate system with respect to the origin.

Parameters

<i>scaleX</i>	The horizontal scale.
<i>scaleY</i>	The vertical scale.

Definition at line 381 of file Graphics.cs.

6.20.2.25 SetClippingPath() [1/3]

```
void VectSharp.Graphics.SetClippingPath (
    double leftX,
```

```
double topY,
double width,
double height )
```

Intersect the current clipping path with the specified rectangle.

Parameters

<i>leftX</i>	The horizontal coordinate of the top-left corner of the rectangle.
<i>topY</i>	The vertical coordinate of the top-left corner of the rectangle.
<i>width</i>	The width of the rectangle.
<i>height</i>	The height of the rectangle.

Definition at line 305 of file Graphics.cs.

6.20.2.26 SetClippingPath() [2/3]

```
void VectSharp.Graphics.SetClippingPath (
    GraphicsPath path )
```

Intersect the current clipping path with the specified [GraphicsPath](#).

Parameters

<i>path</i>	The GraphicsPath to intersect with the current clipping path.
-------------	---

Definition at line 293 of file Graphics.cs.

6.20.2.27 SetClippingPath() [3/3]

```
void VectSharp.Graphics.SetClippingPath (
    Point topLeft,
    Size size )
```

Intersect the current clipping path with the specified rectangle.

Parameters

<i>topLeft</i>	The top-left corner of the rectangle.
<i>size</i>	The size of the rectangle.

Definition at line 315 of file Graphics.cs.

6.20.2.28 StrokePath()

```
void VectSharp.Graphics.StrokePath (
    GraphicsPath path,
    Brush strokeColour,
    double lineWidth = 1,
    LineCaps lineCap = LineCaps.Butt,
    LineJoins lineJoin = LineJoins.Miter,
    LineDash? lineDash = null,
    string tag = null )
```

Stroke a [GraphicsPath](#).

Parameters

<i>path</i>	The GraphicsPath to stroke.
<i>strokeColour</i>	The Brush with which to stroke the GraphicsPath .
<i>lineWidth</i>	The width of the line with which the path is stroked.
<i>lineCap</i>	The line cap to use to stroke the path.
<i>lineJoin</i>	The line join to use to stroke the path.
<i>lineDash</i>	The line dash to use to stroke the path.
<i>tag</i>	A tag to identify the stroked path.

Definition at line 284 of file Graphics.cs.

6.20.2.29 StrokeRectangle() [1/2]

```
void VectSharp.Graphics.StrokeRectangle (
    double leftX,
    double topY,
    double width,
    double height,
    Brush strokeColour,
    double lineWidth = 1,
    LineCaps lineCap = LineCaps.Butt,
    LineJoins lineJoin = LineJoins.Miter,
    LineDash? lineDash = null,
    string tag = null )
```

Stroke a rectangle.

Parameters

<i>leftX</i>	The horizontal coordinate of the top-left corner of the rectangle.
<i>topY</i>	The vertical coordinate of the top-left corner of the rectangle.
<i>width</i>	The width of the rectangle.
<i>height</i>	The height of the rectangle.
<i>strokeColour</i>	The colour with which to stroke the rectangle.
<i>lineWidth</i>	The width of the line with which the rectangle is stroked.
<i>lineCap</i>	The line cap to use to stroke the rectangle.
<i>lineJoin</i>	The line join to use to stroke the rectangle.
<i>lineDash</i>	The line dash to use to stroke the rectangle.
<i>tag</i>	A tag to identify the filled rectangle.

Definition at line 441 of file Graphics.cs.

6.20.2.30 StrokeRectangle() [2/2]

```
void VectSharp.Graphics.StrokeRectangle (
    Point topLeft,
    Size size,
    Brush strokeColour,
    double lineWidth = 1,
    LineCaps lineCap = LineCaps.Butt,
    LineJoins lineJoin = LineJoins.Miter,
    LineDash? lineDash = null,
    string tag = null )
```

Stroke a rectangle.

Parameters

<i>topLeft</i>	The top-left corner of the rectangle.
<i>size</i>	The size of the rectangle.
<i>strokeColour</i>	The colour with which to stroke the rectangle.
<i>lineWidth</i>	The width of the line with which the rectangle is stroked.
<i>lineCap</i>	The line cap to use to stroke the rectangle.
<i>lineJoin</i>	The line join to use to stroke the rectangle.
<i>lineDash</i>	The line dash to use to stroke the rectangle.
<i>tag</i>	A tag to identify the filled rectangle.

Definition at line 423 of file Graphics.cs.

6.20.2.31 StrokeText() [1/4]

```
void VectSharp.Graphics.StrokeText (
    double originX,
    double originY,
    IEnumerable< FormattedText > text,
    Brush strokeColour,
    TextBaselines textBaseline = TextBaselines.Top,
    double lineWidth = 1,
    LineCaps lineCap = LineCaps.Butt,
    LineJoins lineJoin = LineJoins.Miter,
    LineDash? lineDash = null,
    string tag = null )
```

Stroke a formatted text string.

Parameters

<i>originX</i>	The horizontal coordinate of the text origin.
----------------	---

Parameters

<i>originY</i>	The vertical coordinate of the text origin. See <i>textBaseline</i> .
<i>text</i>	The FormattedText to draw.
<i>strokeColour</i>	The default Brush with which to stroke the text.
<i>lineWidth</i>	The width of the line with which the text is stroked.
<i>lineCap</i>	The line cap to use to stroke the text.
<i>lineJoin</i>	The line join to use to stroke the text.
<i>lineDash</i>	The line dash to use to stroke the text.
<i>textBaseline</i>	The text baseline (determines what <i>originY</i> represents).
<i>tag</i>	A tag to identify the stroked text.

Definition at line 500 of file Graphics.Text.cs.

6.20.2.32 StrokeText() [2/4]

```
void VectSharp.Graphics.StrokeText (
    double originX,
    double originY,
    string text,
    Font font,
    Brush strokeColour,
    TextBaselines textBaseline = TextBaselines.Top,
    double lineWidth = 1,
    LineCaps lineCap = LineCaps.Butt,
    LineJoins lineJoin = LineJoins.Miter,
    LineDash? lineDash = null,
    string tag = null )
```

Stroke a text string.

Parameters

<i>originX</i>	The horizontal coordinate of the text origin.
<i>originY</i>	The vertical coordinate of the text origin. See <i>textBaseline</i> .
<i>text</i>	The string to draw.
<i>font</i>	The font with which to draw the text.
<i>strokeColour</i>	The Brush with which to stroke the text.
<i>lineWidth</i>	The width of the line with which the text is stroked.
<i>lineCap</i>	The line cap to use to stroke the text.
<i>lineJoin</i>	The line join to use to stroke the text.
<i>lineDash</i>	The line dash to use to stroke the text.
<i>textBaseline</i>	The text baseline (determines what <i>originY</i> represents).
<i>tag</i>	A tag to identify the stroked text.

Definition at line 72 of file Graphics.Text.cs.

6.20.2.33 StrokeText() [3/4]

```
void VectSharp.Graphics.StrokeText (
    Point origin,
    IEnumerable< FormattedText > text,
    Brush strokeColour,
    TextBaselines textBaseline = TextBaselines.Top,
    double lineWidth = 1,
    LineCaps lineCap = LineCaps.Butt,
    LineJoins lineJoin = LineJoins.Miter,
    LineDash? lineDash = null,
    string tag = null )
```

Stroke a formatted text string.

Parameters

<i>origin</i>	The text origin. See <i>textBaseline</i> .
<i>text</i>	The FormattedText to draw.
<i>strokeColour</i>	The default Brush with which to stroke the text.
<i>lineWidth</i>	The width of the line with which the text is stroked.
<i>lineCap</i>	The line cap to use to stroke the text.
<i>lineJoin</i>	The line join to use to stroke the text.
<i>lineDash</i>	The line dash to use to stroke the text.
<i>textBaseline</i>	The text baseline (determines what the vertical component of <i>origin</i> represents).
<i>tag</i>	A tag to identify the stroked text.

Definition at line 403 of file Graphics.Text.cs.

6.20.2.34 StrokeText() [4/4]

```
void VectSharp.Graphics.StrokeText (
    Point origin,
    string text,
    Font font,
    Brush strokeColour,
    TextBaselines textBaseline = TextBaselines.Top,
    double lineWidth = 1,
    LineCaps lineCap = LineCaps.Butt,
    LineJoins lineJoin = LineJoins.Miter,
    LineDash? lineDash = null,
    string tag = null )
```

Stroke a text string.

Parameters

<i>origin</i>	The text origin. See <i>textBaseline</i> .
<i>text</i>	The string to draw.
<i>font</i>	The font with which to draw the text.
<i>strokeColour</i>	The Brush with which to stroke the text.

Parameters

<i>lineWidth</i>	The width of the line with which the text is stroked.
<i>lineCap</i>	The line cap to use to stroke the text.
<i>lineJoin</i>	The line join to use to stroke the text.
<i>lineDash</i>	The line dash to use to stroke the text.
<i>textBaseline</i>	The text baseline (determines what the vertical component of <i>origin</i> represents).
<i>tag</i>	A tag to identify the stroked text.

Definition at line 53 of file Graphics.Text.cs.

6.20.2.35 StrokeTextOnPath()

```
void VectSharp.Graphics.StrokeTextOnPath (
    GraphicsPath path,
    string text,
    Font font,
    Brush strokeColour,
    double reference = 0,
    TextAnchors anchor = TextAnchors.Left,
    TextBaselines textBaseline = TextBaselines.Top,
    double lineWidth = 1,
    LineCaps lineCap = LineCaps.Butt,
    LineJoins lineJoin = LineJoins.Miter,
    LineDash? lineDash = null,
    string tag = null )
```

Stroke a text string along a [GraphicsPath](#).

Parameters

<i>path</i>	The GraphicsPath along which the text will flow.
<i>text</i>	The string to draw.
<i>font</i>	The font with which to draw the text.
<i>strokeColour</i>	The Brush with which to stroke the text.
<i>lineWidth</i>	The width of the line with which the text is stroked.
<i>lineCap</i>	The line cap to use to stroke the text.
<i>lineJoin</i>	The line join to use to stroke the text.
<i>lineDash</i>	The line dash to use to stroke the text.
<i>reference</i>	The (relative) starting point on the path starting from which the text should be drawn (0 is the start of the path, 1 is the end of the path).
<i>anchor</i>	The anchor in the text string that will correspond to the point specified by the <i>reference</i> .
<i>textBaseline</i>	The text baseline (determines which the position of the text in relation to the <i>path</i> .
<i>tag</i>	A tag to identify the stroked text.

Definition at line 194 of file Graphics.Text.cs.

6.20.2.36 Transform() [1/2]

```
void VectSharp.Graphics.Transform (
    double a,
    double b,
    double c,
    double d,
    double e,
    double f )
```

Transform the coordinate system with the specified transformation matrix [[a, c, e], [b, d, f], [0, 0, 1]].

Parameters

<i>a</i>	The first element of the first column.
<i>b</i>	The second element of the first column.
<i>c</i>	The first element of the second column.
<i>d</i>	The second element of the second column.
<i>e</i>	The first element of the third column.
<i>f</i>	The second element of the third column.

Definition at line 351 of file Graphics.cs.

6.20.2.37 Transform() [2/2]

```
Graphics VectSharp.Graphics.Transform (
    Func< Point, Point > transformationFunction,
    double linearisationResolution )
```

Creates a new [Graphics](#) object in which all the graphics actions have been transformed using an arbitrary transformation function. [Raster](#) images are replaced by grey rectangles.

Parameters

<i>transformationFunction</i>	An arbitrary transformation function.
<i>linearisationResolution</i>	The resolution that will be used to linearise curve segments.

Returns

A new [Graphics](#) object in which all graphics actions have been linearised and transformed using the *transformationFunction*.

Definition at line 885 of file Graphics.cs.

6.20.2.38 Translate() [1/2]

```
void VectSharp.Graphics.Translate (
    double x,
    double y )
```

Translate the coordinate system origin.

Parameters

<i>x</i>	The horizontal translation.
<i>y</i>	The vertical translation.

Definition at line 362 of file Graphics.cs.

6.20.2.39 Translate() [2/2]

```
void VectSharp.Graphics.Translate (
    Point delta )
```

Translate the coordinate system origin.

Parameters

<i>delta</i>	The new origin point.
--------------	-----------------------

Definition at line 371 of file Graphics.cs.

6.20.3 Property Documentation

6.20.3.1 UnbalancedStackAction

```
UnbalancedStackActions VectSharp.Graphics.UnbalancedStackAction = UnbalancedStackActions.Throw
[static], [get], [set]
```

Determines how an unbalanced graphics state stack (which occurs if the number of calls to [Save](#) and [Restore](#) is not equal) will be treated. The default is [UnbalancedStackActions.Throw](#).

Definition at line 258 of file Graphics.cs.

The documentation for this class was generated from the following files:

- VectSharp/Graphics.cs
- VectSharp/Graphics.Text.cs

6.21 VectSharp.GraphicsPath Class Reference

Represents a graphics path that can be filled or stroked.

Public Member Functions

- [GraphicsPath MoveTo](#) ([Point](#) p)
Move the current point without tracing a segment from the previous point.
- [GraphicsPath MoveTo](#) (double x, double y)
Move the current point without tracing a segment from the previous point.
- [GraphicsPath LineTo](#) ([Point](#) p)
Move the current point and trace a segment from the previous point.
- [GraphicsPath LineTo](#) (double x, double y)
Move the current point and trace a segment from the previous point.
- [GraphicsPath Arc](#) ([Point](#) center, double radius, double startAngle, double endAngle)
Trace an arc segment from a circle with the specified center and radius , starting at startAngle and ending at endAngle . The current point is updated to the end point of the arc.
- [GraphicsPath Arc](#) (double centerX, double centerY, double radius, double startAngle, double endAngle)
Trace an arc segment from a circle with the specified center and radius , starting at startAngle and ending at endAngle . The current point is updated to the end point of the arc.
- [GraphicsPath EllipticalArc](#) (double radiusX, double radiusY, double axisAngle, bool largeArc, bool sweep↔ Clockwise, [Point](#) endPoint)
Trace an arc from an ellipse with the specified radii, rotated by axisAngle with respect to the x-axis, starting at the current point and ending at the endPoint .
- [GraphicsPath CubicBezierTo](#) ([Point](#) control1, [Point](#) control2, [Point](#) endPoint)
Trace a cubic Bezier curve from the current point to a destination point, with two control points. The current point is updated to the end point of the Bezier curve.
- [GraphicsPath CubicBezierTo](#) (double control1X, double control1Y, double control2X, double control2Y, double endPointX, double endPointY)
Trace a cubic Bezier curve from the current point to a destination point, with two control points. The current point is updated to the end point of the Bezier curve.
- [GraphicsPath Close](#) ()
Trace a segment from the current point to the start point of the figure and flag the figure as closed.
- [GraphicsPath AddText](#) (double originX, double originY, string text, [Font](#) font, [TextBaselines](#) text↔ Baseline=[TextBaselines.Top](#))
Add the contour of a text string to the current path.
- [GraphicsPath AddText](#) ([Point](#) origin, string text, [Font](#) font, [TextBaselines](#) textBaseline=[TextBaselines.Top](#))
Add the contour of a text string to the current path.
- [GraphicsPath AddTextOnPath](#) ([GraphicsPath](#) path, string text, [Font](#) font, double reference=0, [TextAnchors](#) anchor=[TextAnchors.Left](#), [TextBaselines](#) textBaseline=[TextBaselines.Top](#))
Add the contour of a text string flowing along a [GraphicsPath](#) to the current path.
- [GraphicsPath AddSmoothSpline](#) (params [Point](#)[] points)
Adds a smooth spline composed of cubic bezier segments that pass through the specified points.
- double [MeasureLength](#) ()
Measures the length of the [GraphicsPath](#).
- [Point](#) [GetPointAtRelative](#) (double position)
Gets the point at the relative position specified on the [GraphicsPath](#).
- [Point](#) [GetPointAtAbsolute](#) (double length)
Gets the point at the absolute position specified on the [GraphicsPath](#).
- [Point](#) [GetTangentAtRelative](#) (double position)
Gets the tangent to the point at the relative position specified on the [GraphicsPath](#).

- [Point GetTangentAtAbsolute](#) (double length)
Gets the tangent to the point at the absolute position specified on the [GraphicsPath](#).
- [Point GetNormalAtAbsolute](#) (double length)
Gets the normal to the point at the absolute position specified on the [GraphicsPath](#).
- [Point GetNormalAtRelative](#) (double position)
Gets the normal to the point at the relative position specified on the [GraphicsPath](#).
- [GraphicsPath Linearise](#) (double resolution)
Linearises a [GraphicsPath](#), replacing curve segments with series of line segments that approximate them.
- `IEnumerable< List< Point > > GetPoints ()`
Gets a collection of the end points of all the segments in the [GraphicsPath](#), divided by figure.
- `IEnumerable< List< Point > > GetLinearisationPointsNormals` (double resolution)
Gets a collection of the tangents at the end point of the segments in which the [GraphicsPath](#) would be linearised, divided by figure.
- `IEnumerable< GraphicsPath > Triangulate` (double resolution, bool clockwise)
Divides a [GraphicsPath](#) into triangles.
- [GraphicsPath Transform](#) (`Func< Point, Point > transformationFunction`)
Transforms all of the [Points](#) in the [GraphicsPath](#) with an arbitrary transformation function.

Properties

- `List< Segment > Segments = new List<Segment>()` [get, set]
The segments that make up the path.

6.21.1 Detailed Description

Represents a graphics path that can be filled or stroked.

Definition at line 11 of file GraphicsPath.cs.

6.21.2 Member Function Documentation

6.21.2.1 AddSmoothSpline()

```
GraphicsPath VectSharp.GraphicsPath.AddSmoothSpline (
    params Point[] points )
```

Adds a smooth spline composed of cubic bezier segments that pass through the specified points.

Parameters

<i>points</i>	The points through which the spline should pass.
---------------	--

Returns

The [GraphicsPath](#), to allow for chained calls.

Definition at line 462 of file GraphicsPath.cs.

6.21.2.2 AddText() [1/2]

```
GraphicsPath VectSharp.GraphicsPath.AddText (
    double originX,
    double originY,
    string text,
    Font font,
    TextBaselines textBaseline = TextBaselines.Top )
```

Add the contour of a text string to the current path.

Parameters

<i>originX</i>	The horizontal coordinate of the text origin.
<i>originY</i>	The vertical coordinate of the text origin. See <i>textBaseline</i> .
<i>text</i>	The string to draw.
<i>font</i>	The font with which to draw the text.
<i>textBaseline</i>	The text baseline (determines what <i>originY</i> represents).

///

Returns

The [GraphicsPath](#), to allow for chained calls.

Definition at line 260 of file GraphicsPath.cs.

6.21.2.3 AddText() [2/2]

```
GraphicsPath VectSharp.GraphicsPath.AddText (
    Point origin,
    string text,
    Font font,
    TextBaselines textBaseline = TextBaselines.Top )
```

Add the contour of a text string to the current path.

Parameters

<i>origin</i>	The text origin. See <i>textBaseline</i> .
<i>text</i>	The string to draw.
<i>font</i>	The font with which to draw the text.
<i>textBaseline</i>	The text baseline (determines what the vertical component of <i>origin</i> represents).

Returns

The [GraphicsPath](#), to allow for chained calls.

Definition at line 273 of file GraphicsPath.cs.

6.21.2.4 AddTextOnPath()

```
GraphicsPath VectSharp.GraphicsPath.AddTextOnPath (
    GraphicsPath path,
    string text,
    Font font,
    double reference = 0,
    TextAnchors anchor = TextAnchors.Left,
    TextBaselines textBaseline = TextBaselines.Top )
```

Add the contour of a text string flowing along a [GraphicsPath](#) to the current path.

Parameters

<i>path</i>	The GraphicsPath along which the text will flow.
<i>text</i>	The string to draw.
<i>font</i>	The font with which to draw the text.
<i>reference</i>	The (relative) starting point on the path starting from which the text should be drawn (0 is the start of the path, 1 is the end of the path).
<i>anchor</i>	The anchor in the text string that will correspond to the point specified by the <i>reference</i> .
<i>textBaseline</i>	The text baseline (determines which the position of the text in relation to the <i>path</i> .

Returns

The [GraphicsPath](#), to allow for chained calls.

Definition at line 350 of file GraphicsPath.cs.

6.21.2.5 Arc() [1/2]

```
GraphicsPath VectSharp.GraphicsPath.Arc (
    double centerX,
    double centerY,
    double radius,
    double startAngle,
    double endAngle )
```

Trace an arc segment from a circle with the specified center and *radius* , starting at *startAngle* and ending at *endAngle* . The current point is updated to the end point of the arc.

Parameters

<i>centerX</i>	The horizontal coordinate of the center of the arc.
<i>centerY</i>	The vertical coordinate of the center of the arc.
<i>radius</i>	The radius of the arc.
<i>startAngle</i>	The start angle (in radians) of the arc.
<i>endAngle</i>	The end angle (in radians) of the arc.

Returns

The [GraphicsPath](#), to allow for chained calls.

Definition at line 101 of file GraphicsPath.cs.

6.21.2.6 Arc() [2/2]

```
GraphicsPath VectSharp.GraphicsPath.Arc (  
    Point center,  
    double radius,  
    double startAngle,  
    double endAngle )
```

Trace an arc segment from a circle with the specified *center* and *radius* , starting at *startAngle* and ending at *endAngle* . The current point is updated to the end point of the arc.

Parameters

<i>center</i>	The center of the arc.
<i>radius</i>	The radius of the arc.
<i>startAngle</i>	The start angle (in radians) of the arc.
<i>endAngle</i>	The end angle (in radians) of the arc.

Returns

The [GraphicsPath](#), to allow for chained calls.

Definition at line 81 of file GraphicsPath.cs.

6.21.2.7 Close()

```
GraphicsPath VectSharp.GraphicsPath.Close ( )
```

Trace a segment from the current point to the start point of the figure and flag the figure as closed.

Returns

The [GraphicsPath](#), to allow for chained calls.

Definition at line 245 of file GraphicsPath.cs.

6.21.2.8 CubicBezierTo() [1/2]

```
GraphicsPath VectSharp.GraphicsPath.CubicBezierTo (
    double control1X,
    double control1Y,
    double control2X,
    double control2Y,
    double endPointX,
    double endPointY )
```

Trace a cubic Bezier curve from the current point to a destination point, with two control points. The current point is updated to the end point of the Bezier curve.

Parameters

<i>control1X</i>	The horizontal coordinate of the first control point.
<i>control1Y</i>	The vertical coordinate of the first control point.
<i>control2X</i>	The horizontal coordinate of the second control point.
<i>control2Y</i>	The vertical coordinate of the second control point.
<i>endPointX</i>	The horizontal coordinate of the destination point.
<i>endPointY</i>	The vertical coordinate of the destination point.

Returns

The [GraphicsPath](#), to allow for chained calls.

Definition at line 235 of file GraphicsPath.cs.

6.21.2.9 CubicBezierTo() [2/2]

```
GraphicsPath VectSharp.GraphicsPath.CubicBezierTo (
    Point control1,
    Point control2,
    Point endPoint )
```

Trace a cubic Bezier curve from the current point to a destination point, with two control points. The current point is updated to the end point of the Bezier curve.

Parameters

<i>control1</i>	The first control point.
<i>control2</i>	The second control point.
<i>endPoint</i>	The destination point.

Returns

The [GraphicsPath](#), to allow for chained calls.

Definition at line 214 of file GraphicsPath.cs.

6.21.2.10 EllipticalArc()

```
GraphicsPath VectSharp.GraphicsPath.EllipticalArc (
    double radiusX,
    double radiusY,
    double axisAngle,
    bool largeArc,
    bool sweepClockwise,
    Point endPoint )
```

Trace an arc from an ellipse with the specified radii, rotated by *axisAngle* with respect to the x-axis, starting at the current point and ending at the *endPoint*.

Parameters

<i>radiusX</i>	The horizontal radius of the ellipse.
<i>radiusY</i>	The vertical radius of the ellipse.
<i>axisAngle</i>	The angle of the horizontal axis of the ellipse with respect to the horizontal axis.
<i>largeArc</i>	Determines whether the large or the small arc is drawn.
<i>sweepClockwise</i>	Determines whether the clockwise or anticlockwise arc is drawn.
<i>endPoint</i>	The end point of the arc.

Returns

Definition at line 117 of file GraphicsPath.cs.

6.21.2.11 GetLinearisationPointsNormals()

```
IEnumerable<List<Point>> > VectSharp.GraphicsPath.GetLinearisationPointsNormals (
    double resolution )
```

Gets a collection of the tangents at the end point of the segments in which the [GraphicsPath](#) would be linearised, divided by figure.

Parameters

<i>resolution</i>	The absolute length between successive samples in curve segments.
-------------------	---

Returns

A collection of the tangents at the end point of the segments in which the [GraphicsPath](#) would be linearised, divided by figure.

Definition at line 1256 of file GraphicsPath.cs.

6.21.2.12 GetNormalAtAbsolute()

```
Point VectSharp.GraphicsPath.GetNormalAtAbsolute (
    double length )
```

Gets the normal to the point at the absolute position specified on the [GraphicsPath](#).

Parameters

<i>length</i>	The distance to the point from the start of the GraphicsPath .
---------------	--

Returns

The normal to the point at the specified position.

Definition at line 1161 of file GraphicsPath.cs.

6.21.2.13 GetNormalAtRelative()

```
Point VectSharp.GraphicsPath.GetNormalAtRelative (
    double position )
```

Gets the normal to the point at the relative position specified on the [GraphicsPath](#).

Parameters

<i>position</i>	The position on the GraphicsPath (0 is the start of the path, 1 is the end of the path).
-----------------	--

Returns

The normal to the point at the specified position.

Definition at line 1172 of file GraphicsPath.cs.

6.21.2.14 GetPointAtAbsolute()

```
Point VectSharp.GraphicsPath.GetPointAtAbsolute (
    double length )
```

Gets the point at the absolute position specified on the [GraphicsPath](#).

Parameters

<i>length</i>	The distance to the point from the start of the GraphicsPath .
---------------	--

Returns

The point at the specified position.

Definition at line 577 of file GraphicsPath.cs.

6.21.2.15 GetPointAtRelative()

```
Point VectSharp.GraphicsPath.GetPointAtRelative (
    double position )
```

Gets the point at the relative position specified on the [GraphicsPath](#).

Parameters

<i>position</i>	The position on the GraphicsPath (0 is the start of the path, 1 is the end of the path).
-----------------	--

Returns

The point at the specified position.

Definition at line 567 of file GraphicsPath.cs.

6.21.2.16 GetPoints()

```
IEnumerable<List<Point>> > VectSharp.GraphicsPath.GetPoints ( )
```

Gets a collection of the end points of all the segments in the [GraphicsPath](#), divided by figure.

Returns

A collection of the end points of all the segments in the [GraphicsPath](#), divided by figure.

Definition at line 1211 of file GraphicsPath.cs.

6.21.2.17 GetTangentAtAbsolute()

```
Point VectSharp.GraphicsPath.GetTangentAtAbsolute (
    double length )
```

Gets the tangent to the point at the absolute position specified on the [GraphicsPath](#).

Parameters

<i>length</i>	The distance to the point from the start of the GraphicsPath .
---------------	--

Returns

The tangent to the point at the specified position.

Definition at line 874 of file GraphicsPath.cs.

6.21.2.18 GetTangentAtRelative()

```
Point VectSharp.GraphicsPath.GetTangentAtRelative (
    double position )
```

Gets the tangent to the point at the relative position specified on the [GraphicsPath](#).

Parameters

<i>position</i>	The position on the GraphicsPath (0 is the start of the path, 1 is the end of the path).
-----------------	--

Returns

The tangent to the point at the specified position.

Definition at line 864 of file GraphicsPath.cs.

6.21.2.19 Linearise()

```
GraphicsPath VectSharp.GraphicsPath.Linearise (
    double resolution )
```

Linearises a [GraphicsPath](#), replacing curve segments with series of line segments that approximate them.

Parameters

<i>resolution</i>	The absolute length between successive samples in curve segments.
-------------------	---

Returns

A [GraphicsPath](#) composed only of linear segments that approximates the current [GraphicsPath](#).

Definition at line 1183 of file GraphicsPath.cs.

6.21.2.20 LineTo() [1/2]

```
GraphicsPath VectSharp.GraphicsPath.LineTo (
    double x,
    double y )
```

Move the current point and trace a segment from the previous point.

Parameters

<i>x</i>	The horizontal coordinate of the new point.
<i>y</i>	The vertical coordinate of the new point.

Returns

The [GraphicsPath](#), to allow for chained calls.

Definition at line 66 of file GraphicsPath.cs.

6.21.2.21 LineTo() [2/2]

```
GraphicsPath VectSharp.GraphicsPath.LineTo (
    Point p )
```

Move the current point and trace a segment from the previous point.

Parameters

<i>p</i>	The new point.
----------	----------------

Returns

The [GraphicsPath](#), to allow for chained calls.

Definition at line 47 of file GraphicsPath.cs.

6.21.2.22 MeasureLength()

```
double VectSharp.GraphicsPath.MeasureLength ( )
```

Measures the length of the [GraphicsPath](#).

Returns

The length of the [GraphicsPath](#)

Definition at line 495 of file GraphicsPath.cs.

6.21.2.23 MoveTo() [1/2]

```
GraphicsPath VectSharp.GraphicsPath.MoveTo (
    double x,
    double y )
```

Move the current point without tracing a segment from the previous point.

Parameters

<i>x</i>	The horizontal coordinate of the new point.
<i>y</i>	The vertical coordinate of the new point.

Returns

The [GraphicsPath](#), to allow for chained calls.

Definition at line 36 of file GraphicsPath.cs.

6.21.2.24 MoveTo() [2/2]

```
GraphicsPath VectSharp.GraphicsPath.MoveTo (
    Point p )
```

Move the current point without tracing a segment from the previous point.

Parameters

<i>p</i>	The new point.
----------	----------------

Returns

The [GraphicsPath](#), to allow for chained calls.

Definition at line 24 of file GraphicsPath.cs.

6.21.2.25 Transform()

```
GraphicsPath VectSharp.GraphicsPath.Transform (
    Func< Point, Point > transformationFunction )
```

Transforms all of the [Points](#) in the [GraphicsPath](#) with an arbitrary transformation function.

Parameters

<i>transformationFunction</i>	An arbitrary transformation function.
-------------------------------	---------------------------------------

Returns

A new [GraphicsPath](#) in which all points have been replaced using the *transformationFunction* .

Definition at line 2328 of file GraphicsPath.cs.

6.21.2.26 Triangulate()

```
IEnumerable<GraphicsPath> VectSharp.GraphicsPath.Triangulate (
    double resolution,
    bool clockwise )
```

Divides a [GraphicsPath](#) into triangles.

Parameters

<i>resolution</i>	The resolution that will be used to linearise curve segments in the GraphicsPath .
<i>clockwise</i>	If this is <code>true</code> , the triangles will have their vertices in a clockwise order, otherwise they will be in anticlockwise order.

Returns

A collection of distinct [GraphicsPaths](#), each representing one triangle.

Definition at line 1339 of file GraphicsPath.cs.

6.21.3 Property Documentation

6.21.3.1 Segments

```
List<Segment> VectSharp.GraphicsPath.Segments = new List<Segment>() [get], [set]
```

The segments that make up the path.

Definition at line 16 of file GraphicsPath.cs.

The documentation for this class was generated from the following file:

- VectSharp/GraphicsPath.cs

6.22 VectSharp.Markdown.HTTPUtils Class Reference

Contains utilities to resolve absolute and relative URIs.

Static Public Attributes

- static string [path](#)

Resolves an image Uri, by downloading the image file if necessary. It also takes care of ensuring that the file extension matches the format of the file.

Properties

- static bool [LogDownloads](#) = true [get, set]

Determines whether every file that is downloaded should be logged to the standard error stream.

6.22.1 Detailed Description

Contains utilities to resolve absolute and relative URIs.

Definition at line 227 of file HtmlTag.cs.

6.22.2 Member Data Documentation

6.22.2.1 path

```
string VectSharp.Markdown.HTTPUtils.path [static]
```

Resolves an image Uri, by downloading the image file if necessary. It also takes care of ensuring that the file extension matches the format of the file.

Parameters

<i>uri</i>	The address of the image.
<i>baseUriString</i>	The base uri to use for relative uris.

Returns

A tuple containing the local path of the image file (either the original image, or a local copy of a remote file) and a boolean value indicating whether the image was fetched from a remote location and should be deleted after the program is done with it.

Definition at line 240 of file HtmlTag.cs.

6.22.3 Property Documentation

6.22.3.1 LogDownloads

```
bool VectSharp.Markdown.HTTPUtils.LogDownloads = true [static], [get], [set]
```

Determines whether every file that is downloaded should be logged to the standard error stream.

Definition at line 232 of file HtmlTag.cs.

The documentation for this class was generated from the following file:

- VectSharp.Markdown/HtmlTag.cs

6.23 VectSharp.IGraphicsContext Interface Reference

This interface should be implemented by classes intended to provide graphics output capability to a [Graphics](#) object.

Public Member Functions

- void [Save](#) ()
Save the current transform state (rotation, translation, scale). This should be implemented as a LIFO stack.
- void [Restore](#) ()
Restore the previous transform state (rotation, translation, scale). This should be implemented as a LIFO stack.
- void [Translate](#) (double x, double y)
Translate the coordinate system origin.
- void [Rotate](#) (double angle)
Rotate the coordinate system around the origin.
- void [Scale](#) (double scaleX, double scaleY)
Scale the coordinate system with respect to the origin.
- void [Transform](#) (double a, double b, double c, double d, double e, double f)
Transform the coordinate system with the specified transformation matrix $\begin{bmatrix} a & c & e \\ b & d & f \\ 0 & 0 & 1 \end{bmatrix}$.
- void [FillText](#) (string text, double x, double y)
Fill a text string using the current [Font](#) and [TextBaseline](#).
- void [StrokeText](#) (string text, double x, double y)
Stroke the outline of a text string using the current [Font](#) and [TextBaseline](#).
- void [MoveTo](#) (double x, double y)
Change the current point without drawing a line from the previous point. If necessary, start a new figure.
- void [LineTo](#) (double x, double y)
Draw a line from the previous point to the specified point.
- void [Close](#) ()
Close the current figure.
- void [Stroke](#) ()
Stroke the current path using the current [StrokeStyle](#), [LineWidth](#), [LineCap](#), [LineJoin](#) and [LineDash](#).
- void [SetClippingPath](#) ()
Set the current clipping path as the intersection of the previous clipping path and the current path.

- void [SetFillStyle](#) ((int r, int g, int b, double a) style)
Set the current [FillStyle](#).
- void [SetFillStyle](#) ([Brush](#) style)
Set the current [FillStyle](#).
- void [SetStrokeStyle](#) ((int r, int g, int b, double a) style)
Set the current [StrokeStyle](#).
- void [SetStrokeStyle](#) ([Brush](#) style)
Set the current [StrokeStyle](#).
- void [CubicBezierTo](#) (double p1X, double p1Y, double p2X, double p2Y, double p3X, double p3Y)
Add to the current figure a cubic Bezier from the current point to a destination point, with two control points.
- void [Rectangle](#) (double x0, double y0, double width, double height)
Add a rectangle figure to the current path.
- void [Fill](#) ()
Fill the current path using the current [FillStyle](#).
- void [SetLineDash](#) ([LineDash](#) dash)
Set the current line dash pattern.
- void [DrawRasterImage](#) (int sourceX, int sourceY, int sourceWidth, int sourceHeight, double destinationX, double destinationY, double destinationWidth, double destinationHeight, [RasterImage](#) image)
Draw a raster image.

Properties

- double [Width](#) [get]
Width of the graphic surface.
- double [Height](#) [get]
Height of the graphic surface.
- [Font](#) [Font](#) [get, set]
The current font.
- [TextBaselines](#) [TextBaseline](#) [get, set]
The current text baseline.
- [Brush](#) [FillStyle](#) [get]
Current brush used to fill paths.
- [Brush](#) [StrokeStyle](#) [get]
Current brush used to stroke paths.
- double [LineWidth](#) [get, set]
Current line width used to stroke paths.
- [LineCaps](#) [LineCap](#) [set]
Current line cap used to stroke paths.
- [LineJoins](#) [LineJoin](#) [set]
Current line join used to stroke paths.
- string [Tag](#) [get, set]
The current tag. How this can be used depends on each implementation.

6.23.1 Detailed Description

This interface should be implemented by classes intended to provide graphics output capability to a [Graphics](#) object.

Definition at line 34 of file Graphics.cs.

6.23.2 Member Function Documentation

6.23.2.1 Close()

```
void VectSharp.IGraphicsContext.Close ( )
```

Close the current figure.

6.23.2.2 CubicBezierTo()

```
void VectSharp.IGraphicsContext.CubicBezierTo (
    double p1X,
    double p1Y,
    double p2X,
    double p2Y,
    double p3X,
    double p3Y )
```

Add to the current figure a cubic Bezier from the current point to a destination point, with two control points.

Parameters

<i>p1X</i>	The horizontal coordinate of the first control point.
<i>p1Y</i>	The vertical coordinate of the first control point.
<i>p2X</i>	The horizontal coordinate of the second control point.
<i>p2Y</i>	The vertical coordinate of the second control point.
<i>p3X</i>	The horizontal coordinate of the destination point.
<i>p3Y</i>	The vertical coordinate of the destination point.

6.23.2.3 DrawRasterImage()

```
void VectSharp.IGraphicsContext.DrawRasterImage (
    int sourceX,
    int sourceY,
    int sourceWidth,
    int sourceHeight,
    double destinationX,
    double destinationY,
    double destinationWidth,
    double destinationHeight,
    RasterImage image )
```

Draw a raster image.

Parameters

<i>sourceX</i>	The horizontal coordinate of the top-left corner of the rectangle delimiting the source area of the image.
<i>sourceY</i>	The vertical coordinate of the top-left corner of the rectangle delimiting the source area of the image.
<i>sourceWidth</i>	The width of the rectangle delimiting the source area of the image.
<i>sourceHeight</i>	The height of the rectangle delimiting the source area of the image.
<i>destinationX</i>	The horizontal coordinate of the top-left corner of the rectangle delimiting the destination area of the image.
<i>destinationY</i>	The vertical coordinate of the top-left corner of the rectangle delimiting the destination area of the image.
<i>destinationWidth</i>	The width of the rectangle delimiting the destination area of the image.
<i>destinationHeight</i>	The height of the rectangle delimiting the destination area of the image.
<i>image</i>	The image to draw.

6.23.2.4 Fill()

```
void VectSharp.IGraphicsContext.Fill ( )
```

Fill the current path using the current [FillStyle](#).

6.23.2.5 FillText()

```
void VectSharp.IGraphicsContext.FillText (
    string text,
    double x,
    double y )
```

Fill a text string using the current [Font](#) and [TextBaseline](#).

Parameters

<i>text</i>	The string to draw.
<i>x</i>	The horizontal coordinate of the text origin.
<i>y</i>	The vertical coordinate of the text origin.

6.23.2.6 LineTo()

```
void VectSharp.IGraphicsContext.LineTo (
    double x,
    double y )
```

Draw a line from the previous point to the specified point.

Parameters

<i>x</i>	The horizontal coordinate of the point.
<i>y</i>	The vertical coordinate of the point.

6.23.2.7 MoveTo()

```
void VectSharp.IGraphicsContext.MoveTo (
    double x,
    double y )
```

Change the current point without drawing a line from the previous point. If necessary, start a new figure.

Parameters

<i>x</i>	The horizontal coordinate of the point.
<i>y</i>	The vertical coordinate of the point.

6.23.2.8 Rectangle()

```
void VectSharp.IGraphicsContext.Rectangle (
    double x0,
    double y0,
    double width,
    double height )
```

Add a rectangle figure to the current path.

Parameters

<i>x0</i>	The horizontal coordinate of the top-left corner of the rectangle.
<i>y0</i>	The vertical coordinate of the top-left corner of the rectangle.
<i>width</i>	The width of corner of the rectangle.
<i>height</i>	The height of corner of the rectangle.

6.23.2.9 Restore()

```
void VectSharp.IGraphicsContext.Restore ( )
```

Restore the previous transform state (rotation, translation, scale). This should be implemented as a LIFO stack.

6.23.2.10 Rotate()

```
void VectSharp.IGraphicsContext.Rotate (
    double angle )
```

Rotate the coordinate system around the origin.

Parameters

<i>angle</i>	The angle (in radians) by which to rotate the coordinate system.
--------------	--

6.23.2.11 Save()

```
void VectSharp.IGraphicsContext.Save ( )
```

Save the current transform state (rotation, translation, scale). This should be implemented as a LIFO stack.

6.23.2.12 Scale()

```
void VectSharp.IGraphicsContext.Scale (
    double scaleX,
    double scaleY )
```

Scale the coordinate system with respect to the origin.

Parameters

<i>scaleX</i>	The horizontal scale.
<i>scaleY</i>	The vertical scale.

6.23.2.13 SetClippingPath()

```
void VectSharp.IGraphicsContext.SetClippingPath ( )
```

Set the current clipping path as the intersection of the previous clipping path and the current path.

6.23.2.14 SetFillStyle() [1/2]

```
void VectSharp.IGraphicsContext.SetFillStyle (
    (int r, int g, int b, double a) style )
```

Set the current [FillStyle](#).

Parameters

<i>style</i>	A <code>ValueTuple<Int32, Int32, Int32, Double></code> containing component information for the colour. For r, g, and b, range: [0, 255]; for a, range: [0, 1].
--------------	---

6.23.2.15 SetFillStyle() [2/2]

```
void VectSharp.IGraphicsContext.SetFillStyle (
    Brush style )
```

Set the current [FillStyle](#).

Parameters

<i>style</i>	The new fill style.
--------------	---------------------

6.23.2.16 SetLineDash()

```
void VectSharp.IGraphicsContext.SetLineDash (
    LineDash dash )
```

Set the current line dash pattern.

Parameters

<i>dash</i>	The line dash pattern.
-------------	------------------------

6.23.2.17 SetStrokeStyle() [1/2]

```
void VectSharp.IGraphicsContext.SetStrokeStyle (
    (int r, int g, int b, double a) style )
```

Set the current [StrokeStyle](#).

Parameters

<i>style</i>	A <code>ValueTuple<Int32, Int32, Int32, Double></code> containing component information for the colour. For r, g, and b, range: [0, 255]; for a, range: [0, 1].
--------------	---

6.23.2.18 SetStrokeStyle() [2/2]

```
void VectSharp.IGraphicsContext.SetStrokeStyle (
    Brush style )
```

Set the current [StrokeStyle](#).

Parameters

<i>style</i>	The new stroke style.
--------------	-----------------------

6.23.2.19 Stroke()

```
void VectSharp.IGraphicsContext.Stroke ( )
```

Stroke the current path using the current [StrokeStyle](#), [LineWidth](#), [LineCap](#), [LineJoin](#) and [LineDash](#).

6.23.2.20 StrokeText()

```
void VectSharp.IGraphicsContext.StrokeText (
    string text,
    double x,
    double y )
```

Stroke the outline of a text string using the current [Font](#) and [TextBaseline](#).

Parameters

<i>text</i>	The string to draw.
<i>x</i>	The horizontal coordinate of the text origin.
<i>y</i>	The vertical coordinate of the text origin.

6.23.2.21 Transform()

```
void VectSharp.IGraphicsContext.Transform (
    double a,
    double b,
    double c,
    double d,
    double e,
    double f )
```

Transform the coordinate system with the specified transformation matrix [[a, c, e], [b, d, f], [0, 0, 1]].

Parameters

<i>a</i>	The first element of the first column.
<i>b</i>	The second element of the first column.
<i>c</i>	The first element of the second column.
<i>d</i>	The second element of the second column.
<i>e</i>	The first element of the third column.
<i>f</i>	The second element of the third column.

6.23.2.22 Translate()

```
void VectSharp.IGraphicsContext.Translate (
    double x,
    double y )
```

Translate the coordinate system origin.

Parameters

<i>x</i>	The horizontal translation.
<i>y</i>	The vertical translation.

6.23.3 Property Documentation**6.23.3.1 FillStyle**

Brush VectSharp.IGraphicsContext.FillStyle [get]

Current brush used to fill paths.

Definition at line 145 of file Graphics.cs.

6.23.3.2 Font

Font VectSharp.IGraphicsContext.Font [get], [set]

The current font.

Definition at line 90 of file Graphics.cs.

6.23.3.3 Height

```
double VectSharp.IGraphicsContext.Height [get]
```

Height of the graphic surface.

Definition at line 44 of file Graphics.cs.

6.23.3.4 LineCap

```
LineCaps VectSharp.IGraphicsContext.LineCap [set]
```

Current line cap used to stroke paths.

Definition at line 209 of file Graphics.cs.

6.23.3.5 LineJoin

```
LineJoins VectSharp.IGraphicsContext.LineJoin [set]
```

Current line join used to stroke paths.

Definition at line 214 of file Graphics.cs.

6.23.3.6 LineWidth

```
double VectSharp.IGraphicsContext.LineWidth [get], [set]
```

Current line width used to stroke paths.

Definition at line 204 of file Graphics.cs.

6.23.3.7 StrokeStyle

```
Brush VectSharp.IGraphicsContext.StrokeStyle [get]
```

Current brush used to stroke paths.

Definition at line 162 of file Graphics.cs.

6.23.3.8 Tag

```
string VectSharp.IGraphicsContext.Tag [get], [set]
```

The current tag. How this can be used depends on each implementation.

Definition at line 225 of file Graphics.cs.

6.23.3.9 TextBaseline

```
TextBaselines VectSharp.IGraphicsContext.TextBaseline [get], [set]
```

The current text baseline.

Definition at line 95 of file Graphics.cs.

6.23.3.10 Width

```
double VectSharp.IGraphicsContext.Width [get]
```

Width of the graphic surface.

Definition at line 39 of file Graphics.cs.

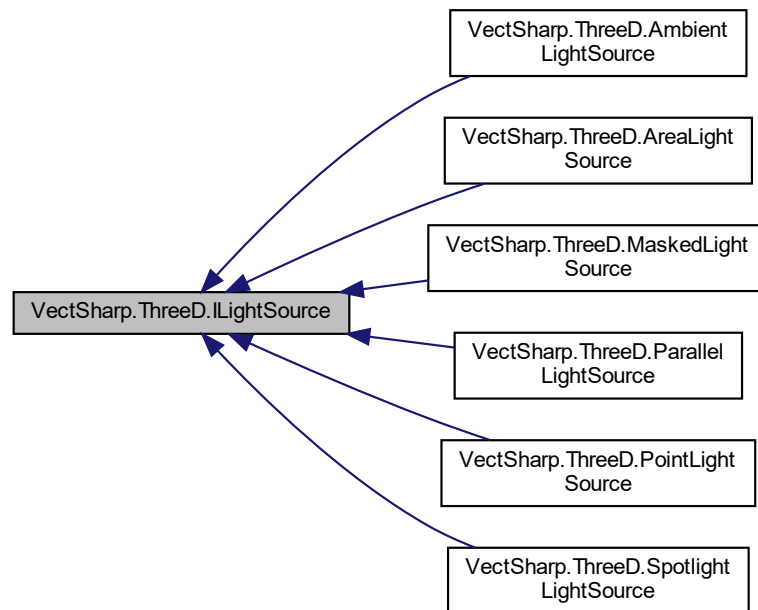

The documentation for this interface was generated from the following file:

- VectSharp/Graphics.cs

6.24 VectSharp.ThreeD.ILightSource Interface Reference

Represents a light source.

Inheritance diagram for VectSharp.ThreeD.ILightSource:

Public Member Functions

- [LightIntensity](#) [GetLightAt](#) (Point3D point)
Computes the light intensity at the specified point, without taking into account any obstructions.
- double [GetObstruction](#) (Point3D point, IEnumerable< Triangle3DElement > shadowingTriangles)
Determines the amount of obstruction of the light that results at point due to the specified shadowingTriangles .

Properties

- bool [CastsShadow](#) [get]
Determines whether the light casts a shadow or not.

6.24.1 Detailed Description

Represents a light source.

Definition at line 48 of file Lights.cs.

6.24.2 Member Function Documentation

6.24.2.1 GetLightAt()

```
LightIntensity VectSharp.ThreeD.ILightSource.GetLightAt (
    Point3D point )
```

Computes the light intensity at the specified point, without taking into account any obstructions.

Parameters

<i>point</i>	The Point3DElement at which the light intensity should be computed.
--------------	---

Returns

Implemented in [VectSharp.ThreeD.AreaLightSource](#), [VectSharp.ThreeD.MaskedLightSource](#), [VectSharp.ThreeD.SpotlightLightSource](#), [VectSharp.ThreeD.PointLightSource](#), [VectSharp.ThreeD.ParallelLightSource](#), and [VectSharp.ThreeD.AmbientLightSource](#).

6.24.2.2 GetObstruction()

```
double VectSharp.ThreeD.ILightSource.GetObstruction (
    Point3D point,
    IEnumerable< Triangle3DElement > shadowingTriangles )
```

Determines the amount of obstruction of the light that results at *point* due to the specified *shadowingTriangles* .

Parameters

<i>point</i>	The Point3D at which the obstruction should be computed.
<i>shadowingTriangles</i>	A collection of Triangle3DElement casting shadows.

Returns

1 if the light is completely obstructed, 0 if the light is completely visible, a value between these if the light is partially obstructed.

Implemented in [VectSharp.ThreeD.AreaLightSource](#), [VectSharp.ThreeD.MaskedLightSource](#), [VectSharp.ThreeD.SpotlightLightSource](#), [VectSharp.ThreeD.PointLightSource](#), [VectSharp.ThreeD.ParallelLightSource](#), and [VectSharp.ThreeD.AmbientLightSource](#).

6.24.3 Property Documentation**6.24.3.1 CastsShadow**

```
bool VectSharp.ThreeD.ILightSource.CastsShadow [get]
```

Determines whether the light casts a shadow or not.

Definition at line 60 of file Lights.cs.

The documentation for this interface was generated from the following file:

- VectSharp.ThreeD/Lights.cs

6.25 VectSharp.MuPDFUtils.ImageURIParser Class Reference

Provides a method to parse an image URI into a page.

Static Public Member Functions

- static Func< string, bool, [Page](#) > [Parser](#) (Func< string, bool, [Page](#) > parseSVG)
Parses an image URI into a page. This is intended to replace the default image URI interpreter in [VectSharp.SVG.Parser.ParseImageURI](#). To do this, use something like:

6.25.1 Detailed Description

Provides a method to parse an image URI into a page.

Definition at line 29 of file ImageURIParser.cs.

6.25.2 Member Function Documentation

6.25.2.1 Parser()

```
static Func<string, bool, Page> VectSharp.MuPDFUtils.ImageURIParser.Parser (
    Func< string, bool, Page > parseSVG ) [static]
```

Parses an image URI into a page. This is intended to replace the default image URI interpreter in [VectSharp.SVG.Parser.ParseImageURI](#). To do this, use something like:

```
VectSharp.SVG.Parser.ParseImageURI = VectSharp.MuPDFUtils.ImageURIParser.Parser (VectShar
```

Parameters

<i>parseSVG</i>	A function to parse an SVG image uri into a page. You should pass VectSharp.SVG.Parser.ParseSVGURI as this argument.
-----------------	--

Returns

A function to parse an image URI into a page.

Definition at line 37 of file ImageURIParser.cs.

The documentation for this class was generated from the following file:

- VectSharp.MuPDFUtils/ImageURIParser.cs

6.26 VectSharp.ThreeD.IMaterial Interface Reference

Represents a material used to the determine the appearance of Triangle3DElement.

Inheritance diagram for VectSharp.ThreeD.IMaterial:

Public Member Functions

- [Colour](#) [GetColour](#) (Point3D point, NormalizedVector3D surfaceNormal, Camera camera, IList< [ILightSource](#) > lights, IList< double > obstructions)
Obtains the [Colour](#) at the specified point.

6.26.1 Detailed Description

Represents a material used to the determine the appearance of Triangle3DElement.

Definition at line 14 of file Materials.cs.

6.26.2 Member Function Documentation

6.26.2.1 GetColour()

```

Colour VectSharp.ThreeD.IMaterial.GetColour (
    Point3D point,
    NormalizedVector3D surfaceNormal,
    Camera camera,
    IList< ILightSource > lights,
    IList< double > obstructions )
  
```

Obtains the [Colour](#) at the specified point.

Parameters

<i>point</i>	The point whose colour should be determined.
<i>surfaceNormal</i>	The normal to the surface at the specified <i>point</i> .
<i>camera</i>	The camera being used to render the scene.
<i>lights</i>	A list of light sources that are present in the scene.
<i>obstructions</i>	A list of values indicating how obstructed each light source is.

Returns

The [Colour](#) of the specified point.

Implemented in [VectSharp.ThreeD.PhongMaterial](#), and [VectSharp.ThreeD.ColourMaterial](#).

The documentation for this interface was generated from the following file:

- VectSharp.ThreeD/Materials.cs

6.27 VectSharp.ThreeD.IScene Interface Reference

Represents a 3D scene.

Inheritance diagram for VectSharp.ThreeD.IScene:

Public Member Functions

- void [AddElement](#) (Element3D element)
Adds the specified element to the scene.
- void [AddRange](#) (IEnumerable< Element3D > elements)
Adds the specified elements to the scene.
- void [Replace](#) (Func< Element3D, Element3D > replacementFunction)
Replaces each element in the scene with the element returned by the replacementFunction .
- void [Replace](#) (Func< Element3D, IEnumerable< Element3D >> replacementFunction)
Replaces each element in the scene with the element(s) returned by the replacementFunction .

Properties

- IEnumerable< Element3D > [SceneElements](#) [get]
The Element3Ds constituting the scene.
- object [SceneLock](#) [get]
An object used to synchronise multithreaded rendering of the same scene.

6.27.1 Detailed Description

Represents a 3D scene.

Definition at line 9 of file Scene.cs.

6.27.2 Member Function Documentation

6.27.2.1 AddElement()

```
void VectSharp.ThreeD.IScene.AddElement (
    Element3D element )
```

Adds the specified *element* to the scene.

Parameters

<i>element</i>	The Element3D to add.
----------------	-----------------------

Implemented in [VectSharp.ThreeD.Scene](#).

6.27.2.2 AddRange()

```
void VectSharp.ThreeD.IScene.AddRange (
    IEnumerable< Element3D > elements )
```

Adds the specified *elements* to the scene.

Parameters

<i>elements</i>	A collection of Element3Ds to add.
-----------------	------------------------------------

Implemented in [VectSharp.ThreeD.Scene](#).

6.27.2.3 Replace() [1/2]

```
void VectSharp.ThreeD.IScene.Replace (
    Func< Element3D, Element3D > replacementFunction )
```

Replaces each element in the scene with the element returned by the *replacementFunction* .

Parameters

<i>replacementFunction</i>	A function replacing each Element3D in the scene with another Element3D.
----------------------------	--

Implemented in [VectSharp.ThreeD.Scene](#).

6.27.2.4 Replace() [2/2]

```
void VectSharp.ThreeD.IScene.Replace (
    Func< Element3D, IEnumerable< Element3D >> replacementFunction )
```

Replaces each element in the scene with the element(s) returned by the *replacementFunction* .

Parameters

<i>replacementFunction</i>	A function replacing each Element3D in the scene with 0 or more Element3Ds.
----------------------------	---

Implemented in [VectSharp.ThreeD.Scene](#).

6.27.3 Property Documentation**6.27.3.1 SceneElements**

```
IEnumerable<Element3D> VectSharp.ThreeD.IScene.SceneElements [get]
```

The Element3Ds constituting the scene.

Definition at line 14 of file Scene.cs.

6.27.3.2 SceneLock

```
object VectSharp.ThreeD.IScene.SceneLock [get]
```

An object used to synchronise multithreaded rendering of the same scene.

Definition at line 43 of file Scene.cs.

The documentation for this interface was generated from the following file:

- VectSharp.ThreeD/Scene.cs

6.28 VectSharp.ThreeD.LightIntensity Struct Reference

Represents the intensity of a light source at a particular point.

Public Member Functions

- [LightIntensity](#) (double intensity, NormalizedVector3D direction)
Creates a new [LightIntensity](#).
- void [Deconstruct](#) (out double intensity, out NormalizedVector3D direction)
Deconstructs the struct.

Public Attributes

- double [Intensity](#)
The intensity of the light.
- NormalizedVector3D [Direction](#)
The direction towards from which the light comes.

6.28.1 Detailed Description

Represents the intensity of a light source at a particular point.

Definition at line 10 of file Lights.cs.

6.28.2 Constructor & Destructor Documentation

6.28.2.1 LightIntensity()

```
VectSharp.ThreeD.LightIntensity.LightIntensity (
    double intensity,
    NormalizedVector3D direction )
```

Creates a new [LightIntensity](#).

Parameters

<i>intensity</i>	The intensity of the light.
<i>direction</i>	The direction from which the light comes.

Definition at line 27 of file Lights.cs.

6.28.3 Member Function Documentation

6.28.3.1 Deconstruct()

```
void VectSharp.ThreeD.LightIntensity.Deconstruct (
    out double intensity,
    out NormalizedVector3D direction )
```

Deconstructs the struct.

Parameters

<i>intensity</i>	This parameter will hold the Intensity of the light.
<i>direction</i>	This parameter will hold the Direction of the light.

Definition at line 38 of file Lights.cs.

6.28.4 Member Data Documentation

6.28.4.1 Direction

```
NormalizedVector3D VectSharp.ThreeD.LightIntensity.Direction
```

The direction towards from which the light comes.

Definition at line 20 of file Lights.cs.

6.28.4.2 Intensity

```
double VectSharp.ThreeD.LightIntensity.Intensity
```

The intensity of the light.

Definition at line 15 of file Lights.cs.

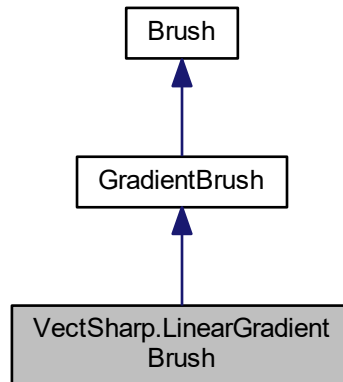

The documentation for this struct was generated from the following file:

- VectSharp.ThreeD/Lights.cs

6.29 VectSharp.LinearGradientBrush Class Reference

Represents a brush painting with a linear gradient.

Inheritance diagram for VectSharp.LinearGradientBrush:

Public Member Functions

- [LinearGradientBrush](#) ([Point](#) startPoint, [Point](#) endPoint, IEnumerable< [GradientStop](#) > gradientStops)
Creates a new [LinearGradientBrush](#) with the specified start point, end point and gradient stops.
- [LinearGradientBrush](#) ([Point](#) startPoint, [Point](#) endPoint, params [GradientStop](#)[] gradientStops)
Creates a new [LinearGradientBrush](#) with the specified start point, end point and gradient stops.
- [LinearGradientBrush RelativeTo](#) ([Graphics](#) referenceGraphics)
Returns a [LinearGradientBrush](#) with the same gradient stops as the current instance, whose start and end point correspond to the points of the current instance in the original reference frame of the referenceGraphics . This involves computing the current transform matrix of the referenceGraphics , inverting it, and applying the inverse matrix to the [StartPoint](#) and [EndPoint](#) of the current instance.
- override [Brush MultiplyOpacity](#) (double opacity)
Returns a brush corresponding the current instance, with the specified opacity multiplication applied.

Properties

- [Point StartPoint](#) [get]
The starting point of the gradient. Note that this is relative to the current coordinate system when the gradient is used.
- [Point EndPoint](#) [get]
The end point of the gradient. Note that this is relative to the current coordinate system when the gradient is used.

Additional Inherited Members

6.29.1 Detailed Description

Represents a brush painting with a linear gradient.

Definition at line 227 of file Brush.cs.

6.29.2 Constructor & Destructor Documentation

6.29.2.1 LinearGradientBrush() [1/2]

```
VectSharp.LinearGradientBrush.LinearGradientBrush (
    Point startPoint,
    Point endPoint,
    IEnumerable< GradientStop > gradientStops )
```

Creates a new [LinearGradientBrush](#) with the specified start point, end point and gradient stops.

Parameters

<i>startPoint</i>	The starting point of the gradient. Note that this is relative to the current coordinate system when the gradient is used.
<i>endPoint</i>	The ending point of the gradient. Note that this is relative to the current coordinate system when the gradient is used.
<i>gradientStops</i>	The colour stops in the gradient.

Definition at line 245 of file Brush.cs.

6.29.2.2 LinearGradientBrush() [2/2]

```
VectSharp.LinearGradientBrush.LinearGradientBrush (
    Point startPoint,
    Point endPoint,
    params GradientStop[] gradientStops )
```

Creates a new [LinearGradientBrush](#) with the specified start point, end point and gradient stops.

Parameters

<i>startPoint</i>	The starting point of the gradient. Note that this is relative to the current coordinate system when the gradient is used.
<i>endPoint</i>	The ending point of the gradient. Note that this is relative to the current coordinate system when the gradient is used.
<i>gradientStops</i>	The colour stops in the gradient.

Definition at line 259 of file Brush.cs.

6.29.3 Member Function Documentation

6.29.3.1 RelativeTo()

```
LinearGradientBrush VectSharp.LinearGradientBrush.RelativeTo (
    Graphics referenceGraphics )
```

Returns a [LinearGradientBrush](#) with the same gradient stops as the current instance, whose start and end point correspond to the points of the current instance in the original reference frame of the *referenceGraphics* . This involves computing the current transform matrix of the *referenceGraphics* , inverting it, and applying the inverse matrix to the [StartPoint](#) and [EndPoint](#) of the current instance.

Parameters

<i>referenceGraphics</i>	The Graphics whose original reference frame is to be used.
--------------------------	--

Returns

A [LinearGradientBrush](#) with the same gradient stops as the current instance, whose start and end point correspond to the points of the current instance in the original reference frame of the *referenceGraphics* .

Definition at line 291 of file Brush.cs.

6.29.4 Property Documentation

6.29.4.1 EndPoint

```
Point VectSharp.LinearGradientBrush.EndPoint [get]
```

The end point of the gradient. Note that this is relative to the current coordinate system when the gradient is used.

Definition at line 237 of file Brush.cs.

6.29.4.2 StartPoint

```
Point VectSharp.LinearGradientBrush.StartPoint [get]
```

The starting point of the gradient. Note that this is relative to the current coordinate system when the gradient is used.

Definition at line 232 of file Brush.cs.

The documentation for this class was generated from the following file:

- VectSharp/Brush.cs

6.30 VectSharp.LineDash Struct Reference

Represents instructions on how to paint a dashed line.

Public Member Functions

- [LineDash](#) (double unitsOn, double unitsOff, double phase)
Define a new line dash pattern.

Public Attributes

- double [UnitsOn](#)
Length of the "on" (painted) segment.
- double [UnitsOff](#)
Length of the "off" (not painted) segment.
- double [Phase](#)
Position in the dash pattern at which the line starts.

Static Public Attributes

- static [LineDash SolidLine](#) = new [LineDash](#)(0, 0, 0)
A solid (not dashed) line

6.30.1 Detailed Description

Represents instructions on how to paint a dashed line.

Definition at line 112 of file Enums.cs.

6.30.2 Constructor & Destructor Documentation

6.30.2.1 LineDash()

```
VectSharp.LineDash.LineDash (
    double unitsOn,
    double unitsOff,
    double phase )
```

Define a new line dash pattern.

Parameters

<i>unitsOn</i>	The length of the "on" (painted) segment.
<i>unitsOff</i>	The length of the "off" (not painted) segment.
<i>phase</i>	The position in the dash pattern at which the line starts.

Definition at line 140 of file Enums.cs.

6.30.3 Member Data Documentation

6.30.3.1 Phase

```
double VectSharp.LineDash.Phase
```

Position in the dash pattern at which the line starts.

Definition at line 132 of file Enums.cs.

6.30.3.2 SolidLine

```
LineDash VectSharp.LineDash.SolidLine = new LineDash(0, 0, 0) [static]
```

A solid (not dashed) line

Definition at line 117 of file Enums.cs.

6.30.3.3 UnitsOff

```
double VectSharp.LineDash.UnitsOff
```

Length of the "off" (not painted) segment.

Definition at line 127 of file Enums.cs.

6.30.3.4 UnitsOn

```
double VectSharp.LineDash.UnitsOn
```

Length of the "on" (painted) segment.

Definition at line 122 of file Enums.cs.

The documentation for this struct was generated from the following file:

- VectSharp/Enums.cs

6.31 VectSharp.Markdown.Margins Class Reference

Represents the margins of a page.

Public Member Functions

- [Margins](#) (double left, double top, double right, double bottom)
Creates a new [Margins](#) instance.

Properties

- double [Left](#) [get]
The left margin.
- double [Right](#) [get]
The right margin.
- double [Top](#) [get]
The top margin.
- double [Bottom](#) [get]
The bottom margin.

6.31.1 Detailed Description

Represents the margins of a page.

Definition at line 168 of file MarkdownContext.cs.

6.31.2 Constructor & Destructor Documentation

6.31.2.1 Margins()

```
VectSharp.Markdown.Margins.Margins (
    double left,
    double top,
    double right,
    double bottom )
```

Creates a new [Margins](#) instance.

Parameters

<i>left</i>	The left margin.
<i>top</i>	The top margin.
<i>right</i>	The right margin.
<i>bottom</i>	The bottom margin.

Definition at line 197 of file MarkdownContext.cs.

6.31.3 Property Documentation

6.31.3.1 Bottom

```
double VectSharp.Markdown.Margins.Bottom [get]
```

The bottom margin.

Definition at line 188 of file MarkdownContext.cs.

6.31.3.2 Left

```
double VectSharp.Markdown.Margins.Left [get]
```

The left margin.

Definition at line 173 of file MarkdownContext.cs.

6.31.3.3 Right

```
double VectSharp.Markdown.Margins.Right [get]
```

The right margin.

Definition at line 178 of file MarkdownContext.cs.

6.31.3.4 Top

```
double VectSharp.Markdown.Margins.Top [get]
```

The top margin.

Definition at line 183 of file MarkdownContext.cs.

The documentation for this class was generated from the following file:

- VectSharp.Markdown/MarkdownContext.cs

6.32 VectSharp.MarkdownCanvas.MarkdownCanvasControl Class Reference

A control to display a [Markdown](#) document in an Avalonia application.

Inheritance diagram for VectSharp.MarkdownCanvas.MarkdownCanvasControl:

Public Member Functions

- [MarkdownCanvasControl](#) ()
Initialises a new [MarkdownCanvasControl](#).

Static Public Attributes

- static readonly StyledProperty< double > [MaxRenderWidthProperty](#) = AvaloniaProperty.Register<[MarkdownCanvasControl](#), double>(nameof([MaxRenderWidth](#)), double.PositiveInfinity)
Defines the [MaxRenderWidth](#) property.
- static readonly StyledProperty< double > [MinRenderWidthProperty](#) = AvaloniaProperty.Register<[MarkdownCanvasControl](#), double>(nameof([MinRenderWidth](#)), 200)
Defines the [MinRenderWidth](#) property.
- static readonly StyledProperty< double > [MinVariationProperty](#) = AvaloniaProperty.Register<[MarkdownCanvasControl](#), double>(nameof([MinVariation](#)), 10)
Defines the [MinVariation](#) property.
- static readonly StyledProperty< string > [DocumentSourceProperty](#) = AvaloniaProperty.Register<[MarkdownCanvasControl](#), string>(nameof([DocumentSource](#)))
Defines the [DocumentSource](#) property.
- static readonly StyledProperty< MarkdownDocument > [DocumentProperty](#) = AvaloniaProperty.Register<[MarkdownCanvasControl](#), MarkdownDocument>(nameof([Document](#)))
Defines the [Document](#) property.
- static readonly StyledProperty< [AvaloniaContextInterpreter.TextOptions](#) > [TextConversionOptionsProperty](#) = AvaloniaProperty.Register<[MarkdownCanvasControl](#), [AvaloniaContextInterpreter.TextOptions](#)>(nameof([TextConversionOptionsProperty](#)), [AvaloniaContextInterpreter.TextOptions.ConvertIfNecessary](#))
Defines the [TextConversionOption](#) property.

Properties

- double [MaxRenderWidth](#) [get, set]
The maximum width for the rendered document. This will be used even if the control's client area is larger than this (the alignment of the document within the controll will depend on the control's [ContentControl.HorizontalContent↔Alignment](#)).
- double [MinRenderWidth](#) [get, set]
The minimum width for the rendered document. If the control's client area is smaller than this, the horizontal scroll bar will be activated.
- double [MinVariation](#) [get, set]
The minimum width variation that triggers a document reflow. If the control is resized, but the width changes by less than this amount, the document is not re-drawn.
- string [DocumentSource](#) [set]
Sets the currently displayed document from [Markdown](#) source.
- MarkdownDocument [Document](#) [get, set]
Gets or sets the currently displayed [MarkdownDocument](#).
- [AvaloniaContextInterpreter.TextOptions](#) [TextConversionOption](#) [get, set]
Gets or sets the value that determines whether text items should be converted into paths when drawing. Setting this to [AvaloniaContextInterpreter.TextOptions.NeverConvert](#) will improve performance if you are using custom fonts, but may cause unexpected results unless the font families being used are of type [ResourceFontFamily](#).
- [MarkdownRenderer](#) [Renderer](#) [get]
The [MarkdownRenderer](#) used to render the [Document](#). You can use the properties of this object to customise the rendering. Note that setting the [Avalonia.Controls.Primitives.TemplatedControl.FontSize](#) of the [MarkdownCanvasControl](#) will propagate to the [Renderer](#)'s [MarkdownRenderer.BaseFontSize](#).

6.32.1 Detailed Description

A control to display a [Markdown](#) document in an Avalonia application.

Definition at line 18 of file [MarkdownCanvas.axaml.cs](#).

6.32.2 Constructor & Destructor Documentation

6.32.2.1 [MarkdownCanvasControl\(\)](#)

```
VectSharp.MarkdownCanvas.MarkdownCanvasControl.MarkdownCanvasControl ( )
```

Initialises a new [MarkdownCanvasControl](#).

Definition at line 116 of file [MarkdownCanvas.axaml.cs](#).

6.32.3 Member Data Documentation

6.32.3.1 DocumentProperty

```
readonly StyledProperty<MarkdownDocument> VectSharp.MarkdownCanvas.MarkdownCanvasControl.Document↵  
Property = AvaloniaProperty.Register<MarkdownCanvasControl, MarkdownDocument>(nameof(Document))  
[static]
```

Defines the [Document](#) property.

Definition at line 78 of file MarkdownCanvas.axaml.cs.

6.32.3.2 DocumentSourceProperty

```
readonly StyledProperty<string> VectSharp.MarkdownCanvas.MarkdownCanvasControl.Document↵  
SourceProperty = AvaloniaProperty.Register<MarkdownCanvasControl, string>(nameof(DocumentSource))  
[static]
```

Defines the [DocumentSource](#) property.

Definition at line 65 of file MarkdownCanvas.axaml.cs.

6.32.3.3 MaxRenderWidthProperty

```
readonly StyledProperty<double> VectSharp.MarkdownCanvas.MarkdownCanvasControl.MaxRender↵  
WidthProperty = AvaloniaProperty.Register<MarkdownCanvasControl, double>(nameof(MaxRenderWidth),  
double.PositiveInfinity) [static]
```

Defines the [MaxRenderWidth](#) property.

Definition at line 23 of file MarkdownCanvas.axaml.cs.

6.32.3.4 MinRenderWidthProperty

```
readonly StyledProperty<double> VectSharp.MarkdownCanvas.MarkdownCanvasControl.MinRender↵  
WidthProperty = AvaloniaProperty.Register<MarkdownCanvasControl, double>(nameof(MinRenderWidth),  
200) [static]
```

Defines the [MinRenderWidth](#) property.

Definition at line 37 of file MarkdownCanvas.axaml.cs.

6.32.3.5 MinVariationProperty

```
readonly StyledProperty<double> VectSharp.MarkdownCanvas.MarkdownCanvasControl.MinVariation↵  
Property = AvaloniaProperty.Register<MarkdownCanvasControl, double>(nameof(MinVariation), 10)  
[static]
```

Defines the [MinVariation](#) property.

Definition at line 51 of file MarkdownCanvas.axaml.cs.

6.32.3.6 TextConversionOptionsProperty

```
readonly StyledProperty<AvaloniaContextInterpreter.TextOptions> VectSharp.MarkdownCanvas.↵  
MarkdownCanvasControl.TextConversionOptionsProperty = AvaloniaProperty.Register<MarkdownCanvasControl,  
AvaloniaContextInterpreter.TextOptions>(nameof(TextConversionOption), AvaloniaContextInterpreter.↵  
TextOptions.ConvertIfNecessary) [static]
```

Defines the [TextConversionOption](#) property.

Definition at line 92 of file MarkdownCanvas.axaml.cs.

6.32.4 Property Documentation

6.32.4.1 Document

```
MarkdownDocument VectSharp.MarkdownCanvas.MarkdownCanvasControl.Document [get], [set]
```

Gets or sets the currently displayed MarkdownDocument.

Definition at line 83 of file MarkdownCanvas.axaml.cs.

6.32.4.2 DocumentSource

```
string VectSharp.MarkdownCanvas.MarkdownCanvasControl.DocumentSource [set]
```

Sets the currently displayed document from [Markdown](#) source.

Definition at line 70 of file MarkdownCanvas.axaml.cs.

6.32.4.3 MaxRenderWidth

```
double VectSharp.MarkdownCanvas.MarkdownCanvasControl.MaxRenderWidth [get], [set]
```

The maximum width for the rendered document. This will be used even if the control's client area is larger than this (the alignment of the document within the control will depend on the control's `ContentControl.HorizontalContentAlignment`).

Definition at line 28 of file `MarkdownCanvas.axaml.cs`.

6.32.4.4 MinRenderWidth

```
double VectSharp.MarkdownCanvas.MarkdownCanvasControl.MinRenderWidth [get], [set]
```

The minimum width for the rendered document. If the control's client area is smaller than this, the horizontal scroll bar will be activated.

Definition at line 42 of file `MarkdownCanvas.axaml.cs`.

6.32.4.5 MinVariation

```
double VectSharp.MarkdownCanvas.MarkdownCanvasControl.MinVariation [get], [set]
```

The minimum width variation that triggers a document reflow. If the control is resized, but the width changes by less than this amount, the document is not re-drawn.

Definition at line 56 of file `MarkdownCanvas.axaml.cs`.

6.32.4.6 Renderer

```
MarkdownRenderer VectSharp.MarkdownCanvas.MarkdownCanvasControl.Renderer [get]
```

The `MarkdownRenderer` used to render the [Document](#). You can use the properties of this object to customise the rendering. Note that setting the `Avalonia.Controls.Primitives.TemplatedControl.FontSize` of the [MarkdownCanvasControl](#) will propagate to the [Renderer](#)'s `MarkdownRenderer.BaseFontSize`.

Definition at line 107 of file `MarkdownCanvas.axaml.cs`.

6.32.4.7 TextConversionOption

`AvaloniaContextInterpreter.TextOptions` `VectSharp.MarkdownCanvas.MarkdownCanvasControl.Text↔`
`ConversionOption` [get], [set]

Gets or sets the value that determines whether text items should be converted into paths when drawing. Setting this to `AvaloniaContextInterpreter.TextOptions.NeverConvert` will improve performance if you are using custom fonts, but may cause unexpected results unless the font families being used are of type `ResourceFontFamily`.

Definition at line 98 of file `MarkdownCanvas.axaml.cs`.

The documentation for this class was generated from the following file:

- `VectSharp.MarkdownCanvas/MarkdownCanvas.axaml.cs`

6.33 VectSharp.Markdown.MarkdownRenderer Class Reference

Renders [Markdown](#) documents into [VectSharp](#) graphics objects.

Public Types

- enum [VerticalAlignment](#) { [VerticalAlignment.Top](#), [VerticalAlignment.Middle](#), [VerticalAlignment.Bottom](#) }
- Defines the options for the vertical alignment of table cells.*

Public Member Functions

- [Page RenderSinglePage](#) (string markdownSource, double width, out Dictionary< string, string > link↔Destinations)
Parses the supplied markdownSource using all the supported extensions and renders the resulting document. [Page](#) breaks are disabled, and the document is rendered as a single page with the specified width . The page will be cropped at the appropriate height to contain the entire document.
- [Page RenderSinglePage](#) (MarkdownDocument markdownDocument, double width, out Dictionary< string, string > linkDestinations)
Renders the supplied markdownDocument . [Page](#) breaks are disabled, and the document is rendered as a single page with the specified width . The page will be cropped at the appropriate height to contain the entire document.
- [Document Render](#) (string markdownSource, out Dictionary< string, string > linkDestinations)
Parses the supplied markdownSource using all the supported extensions and renders the resulting document. The [Document](#) produced consists of one or more pages of the size specified in the [PageSize](#) of the current instance.
- [Document Render](#) (MarkdownDocument markdownDocument, out Dictionary< string, string > link↔Destinations)
Renders the supplied markdownDocument . The [Document](#) produced consists of one or more pages of the size specified in the [PageSize](#) of the current instance.

Properties

- double **BaseFontSize** = 9.71424 [get, set]
The base font size to use when rendering the document. This will be the size of regular elements, and the size of header elements will be expressed as a multiple of this.
- double[] **HeaderFontSizeMultipliers** [get]
The font size for elements at each header level. The values in this array will be multiplied by the [BaseFontSize](#).
- double[] **HeaderLineThicknesses** = new double[] { 1, 1, 0, 0, 0, 0 } [get]
The thickness of the separator line after a header of each level. A value of 0 disables the line after headers of that level.
- double **ThematicBreakThickness** = 2 [get, set]
The thickness of thematic break lines.
- **FontFamily RegularFontFamily** = new **FontFamily**(FontFamily.StandardFontFamilies.Helvetica) [get, set]
The font family for regular text.
- **FontFamily BoldFontFamily** = new **FontFamily**(FontFamily.StandardFontFamilies.HelveticaBold) [get, set]
The font family for bold text.
- **FontFamily ItalicFontFamily** = new **FontFamily**(FontFamily.StandardFontFamilies.HelveticaOblique) [get, set]
The font family for italic text.
- **FontFamily BoldItalicFontFamily** = new **FontFamily**(FontFamily.StandardFontFamilies.HelveticaBoldOblique) [get, set]
The font family for bold italic text.
- **FontFamily CodeFont** = new **FontFamily**(FontFamily.StandardFontFamilies.Courier) [get, set]
The font family for code elements.
- **FontFamily CodeFontBold** = new **FontFamily**(FontFamily.StandardFontFamilies.CourierBold) [get, set]
The font family for bold code elements.
- **FontFamily CodeFontItalic** = new **FontFamily**(FontFamily.StandardFontFamilies.CourierOblique) [get, set]
The font family for italic code elements.
- **FontFamily CodeFontBoldItalic** = new **FontFamily**(FontFamily.StandardFontFamilies.CourierBoldOblique) [get, set]
The font family for bold italic code elements.
- double **UnderlineThickness** = 0.075 [get, set]
The thickness of underlines. This value will be multiplied by the font size of the element being underlined.
- double **BoldUnderlineThickness** = 0.15 [get, set]
The thickness of underlines for bold text. This value will be multiplied by the font size of the element being underlined.
- **Margins Margins** = new **Margins**(55, 55, 55, 55) [get, set]
The margins of the page.
- **Margins TableCellMargins** = new **Margins**(5, 0, 5, 0) [get, set]
The margins for table cells.
- **VerticalAlignment TableVAlign** = **VerticalAlignment.Middle** [get, set]
The vertical alignment of table cells.
- **Size PageSize** = new **Size**(595, 842) [get, set]
The size of the page.
- double **SpaceBeforeParagraph** = 0 [get, set]
The space before each text paragraph. This value will be multiplied by the [BaseFontSize](#).
- double **SpaceAfterParagraph** = 0.75 [get, set]
The space after each text paragraph. This value will be multiplied by the [BaseFontSize](#).
- double **SpaceAfterLine** = 0.25 [get, set]

- The space after each line of text. This value will be multiplied by the [BaseFontSize](#).*

 - double [SpaceBeforeHeading](#) = 0.25 [get, set]

The space before each heading. This value will be multiplied by the font size of the heading.

 - double [SpaceAfterHeading](#) = 0.25 [get, set]

The space after each heading. This value will be multiplied by the font size of the heading.

 - double [CodeInlineMargin](#) = 0.25 [get, set]

The margin at the left and right of code inlines. This value will be multiplied by the current font size.

 - double [IndentWidth](#) = 40 [get, set]

The indentation width used for list items.

 - double [QuoteBlockIndentWidth](#) = 30 [get, set]

The indentation width used for block quotes.

 - double [QuoteBlockBarWidth](#) = 5 [get, set]

The thickness of the bar to the left of block quotes.

 - double [SubSuperscriptFontSize](#) = 0.7 [get, set]

The font size for subscripts and superscripts. This value will be multiplied by the current font size.

 - double [SuperscriptShift](#) = 0.33 [get, set]

The upwards shift in the baseline for superscript elements. This value will be multiplied by the current font size.

 - double [SubscriptShift](#) = 0.14 [get, set]

The downwards shift in the baseline for subscript elements. This value will be multiplied by the current font size.

 - string [BaseImageUri](#) = "" [get, set]

The base uri for resolving relative image addresses.

 - Func< string, string,(string, bool)> [ImageUriResolver](#) = HTTPUtils.ResolveImageURI [get, set]

A method used to resolve (possibly remote) image uris into local file paths. The first argument of the method should be the image uri and the second argument the base uri used to resolve relative links. The method should return a tuple containing the path of the local file and a boolean value indicating whether the file has been fetched from a remote location and should be deleted after the program has finished using it.

 - Uri [BaseLinkUri](#) = new Uri("about:blank") [get, set]

The base uri for resolving links.

 - Func< string, string > [LinkUriResolver](#) = a => a [get, set]

A method used to resolve link addresses. The argument of the method should be the absolute link, and the method should return the resolved address. This can be used to "redirect" links to a different target.

 - Func< string, [RasterImage](#) > [RasterImageLoader](#) = null [get, set]

A method used to load raster image from a local file. The argument of the method should be the path of a local image file, and the method should return a [RasterImage](#) representing that file. For example, this can be achieved using the [RasterImageFile](#) class from the [VectSharp.MuPDFUtils](#) package. If this is null, only [SVG](#) images will be included in the document.

 - double [ImageUnitMultiplier](#) = 0.60714 [get, set]

The size of images (as defined in the image's width and height attributes) will be multiplied by this value to determine the actual size of the image on the page. This has no effect on images without a width or height attribute.

 - double [ImageMultiplier](#) = 1 [get, set]

The size of images will be multiplied by this value to determine the actual size of the image on the page. For images that have a width or height attribute, this will be applied in addition to the [ImageUnitMultiplier](#). For images without width and height, only this multiplier will be applied.

 - double [ImageSideMargin](#) = 10 [get, set]

The margin on the right of left-aligned images and on the left of right-aligned images.

 - double [ImageMarginTolerance](#) = 25 [get, set]

Images will be allowed to extend into the page bottom margin area by this amount before triggering a page break. This should be smaller than the bottom margin, otherwise images risk being cut off by the page boundary.

 - Func< string, string, List< List< [FormattedString](#) > > > [SyntaxHighlighter](#) = VectSharp.Markdown.SyntaxHighlighter.GetSyntax [get, set]

A method used for syntax highlighting. The first argument should be the source code to highlight, while the second parameter is the name of the language to use for the highlight. The method should return a list of lists of [FormattedStrings](#), with each list of [FormattedStrings](#) representing a line. For each code block, if the method returns null, no syntax highlighting is used.

- `List< Action< Graphics, Colour > > Bullets` [get]
- Bullet points used for unordered lists. Each element of this list corresponds to the bullet for each level of list indentation. If the list indentation is greater than the number of elements in this list, the bullet points will be reused cyclically. Each element of this list is a method taking two arguments: the first is the `Graphics` object on which the bullet point should be drawn, while the second is the colour in which it should be painted. The method should draw the bullet point centered around the origin. The size of the bullet point will be multiplied by the current font size.*
- `Colour ForegroundColor = Colours.Black` [get, set]
- The foreground colour for text elements.*
- `Colour BackgroundColour = Colours.White` [get, set]
- The background colour for the page.*
- `Colour HeaderLineColour = Colour.FromRgb(180, 180, 180)` [get, set]
- The colour of the line below headers.*
- `Colour ThematicBreakLineColour = Colour.FromRgb(180, 180, 200)` [get, set]
- The colour for thematic break lines.*
- `Colour LinkColour = Colour.FromRgb(25, 140, 191)` [get, set]
- The colour for hypertext links-*
- `Colour CodeInlineBackgroundColour = Colour.FromRgb(240, 240, 240)` [get, set]
- The background colour for code inlines.*
- `Colour CodeBlockBackgroundColour = Colour.FromRgb(240, 240, 245)` [get, set]
- The background colour for code blocks.*
- `Colour QuoteBlockBarColour = Colour.FromRgb(75, 152, 220)` [get, set]
- The colour for the bar to the left of block quotes.*
- `Colour QuoteBlockBackgroundColour = Colour.FromRgb(240, 240, 255)` [get, set]
- The background colour for block quotes.*
- `Colour InsertedColour = Colour.FromRgb(0, 158, 115)` [get, set]
- The colour for text that has been styled as "inserted".*
- `Colour MarkedColour = Colour.FromRgb(213, 94, 0)` [get, set]
- The colour for text that has been styled as "marked".*
- `Colour TableHeaderRowSeparatorColour = Colours.Black` [get, set]
- The colour for the line separating the table header row from normal rows.*
- `Colour TableRowSeparatorColour = Colour.FromRgb(180, 180, 180)` [get, set]
- The colour for lines separating table rows from each other.*
- `double TableHeaderRowSeparatorThickness = 2` [get, set]
- The thickness of the line separating the table header row from normal rows.*
- `double TableHeaderSeparatorThickness = 1` [get, set]
- The thickness of lines separating table rows from each other.*
- `Graphics TaskListUncheckedBullet` [get, set]
- The bullet used for unchecked task list items.*
- `Graphics TaskListCheckedBullet` [get, set]
- The bullet used for checked task list items.*
- `bool AllowPageBreak = true` [get, set]
- Determines whether page breaks should be treated as such in the source.*

6.33.1 Detailed Description

Renders `Markdown` documents into `VectSharp` graphics objects.

Definition at line 18 of file `MarkdownRenderer.cs`.

6.33.2 Member Enumeration Documentation

6.33.2.1 VerticalAlignment

enum `VectSharp.Markdown.MarkdownRenderer.VerticalAlignment` [strong]

Defines the options for the vertical alignment of table cells.

Enumerator

Top	Table cells will be aligned at the top of their row.
Middle	Table cells will be aligned in the middle of their row.
Bottom	Table cells will be aligned at the bottom of their row.

Definition at line 106 of file MarkdownRenderer.cs.

6.33.3 Member Function Documentation

6.33.3.1 Render() [1/2]

Document `VectSharp.Markdown.MarkdownRenderer.Render (`
 `MarkdownDocument markdownDocument,`
 `out Dictionary< string, string > linkDestinations)`

Renders the supplied *markdownDocument* . The **Document** produced consists of one or more pages of the size specified in the **PageSize** of the current instance.

Parameters

<i>markdownDocument</i>	The markdown document to render.
<i>linkDestinations</i>	When this method returns, this value will contain a dictionary used to associate graphic action tags to hyperlinks. This can be used to enable such links when rendering the Document to a file.

Returns

A **Document** containing a rendering of the supplied markdown document, consisting of one or more pages of the size specified in the **PageSize** of the current instance.

Definition at line 478 of file MarkdownRenderer.cs.

6.33.3.2 Render() [2/2]

```
Document VectSharp.Markdown.MarkdownRenderer.Render (
    string markdownSource,
    out Dictionary< string, string > linkDestinations )
```

Parses the supplied *markdownSource* using all the supported extensions and renders the resulting document. The [Document](#) produced consists of one or more pages of the size specified in the [PageSize](#) of the current instance.

Parameters

<i>markdownSource</i>	The markdown source to parse.
<i>linkDestinations</i>	When this method returns, this value will contain a dictionary used to associate graphic action tags to hyperlinks. This can be used to enable such links when rendering the Document to a file.

Returns

A [Document](#) containing a rendering of the supplied markdown document, consisting of one or more pages of the size specified in the [PageSize](#) of the current instance.

Definition at line 465 of file MarkdownRenderer.cs.

6.33.3.3 RenderSinglePage() [1/2]

```
Page VectSharp.Markdown.MarkdownRenderer.RenderSinglePage (
    MarkdownDocument markdownDocument,
    double width,
    out Dictionary< string, string > linkDestinations )
```

Renders the supplied *markdownDocument* . [Page](#) breaks are disabled, and the document is rendered as a single page with the specified *width* . The page will be cropped at the appropriate height to contain the entire document.

Parameters

<i>markdownDocument</i>	The markdown document to render.
<i>width</i>	The width of the page.
<i>linkDestinations</i>	When this method returns, this value will contain a dictionary used to associate graphic action tags to hyperlinks. This can be used to enable such links when rendering the Page to a file.

Returns

A [Page](#) containing a rendering of the supplied markdown document.

Definition at line 406 of file MarkdownRenderer.cs.

6.33.3.4 RenderSinglePage() [2/2]

```
Page VectSharp.Markdown.MarkdownRenderer.RenderSinglePage (
    string markdownSource,
    double width,
    out Dictionary< string, string > linkDestinations )
```

Parses the supplied *markdownSource* using all the supported extensions and renders the resulting document. [Page](#) breaks are disabled, and the document is rendered as a single page with the specified *width* . The page will be cropped at the appropriate height to contain the entire document.

Parameters

<i>markdownSource</i>	The markdown source to parse.
<i>width</i>	The width of the page.
<i>linkDestinations</i>	When this method returns, this value will contain a dictionary used to associate graphic action tags to hyperlinks. This can be used to enable such links when rendering the Page to a file.

Returns

A [Page](#) containing a rendering of the supplied markdown document.

Definition at line 392 of file MarkdownRenderer.cs.

6.33.4 Property Documentation

6.33.4.1 AllowPageBreak

```
bool VectSharp.Markdown.MarkdownRenderer.AllowPageBreak = true [get], [set]
```

Determines whether page breaks should be treated as such in the source.

Definition at line 378 of file MarkdownRenderer.cs.

6.33.4.2 BackgroundColour

```
Colour VectSharp.Markdown.MarkdownRenderer.BackgroundColor = Colours.White [get], [set]
```

The background colour for the page.

Definition at line 274 of file MarkdownRenderer.cs.

6.33.4.3 BaseFontSize

```
double VectSharp.Markdown.MarkdownRenderer.BaseFontSize = 9.71424 [get], [set]
```

The base font size to use when rendering the document. This will be the size of regular elements, and the size of header elements will be expressed as a multiple of this.

Definition at line 23 of file MarkdownRenderer.cs.

6.33.4.4 BaseImageUri

```
string VectSharp.Markdown.MarkdownRenderer.BaseImageUri = "" [get], [set]
```

The base uri for resolving relative image addresses.

Definition at line 197 of file MarkdownRenderer.cs.

6.33.4.5 BaseLinkUri

```
Uri VectSharp.Markdown.MarkdownRenderer.BaseLinkUri = new Uri("about:blank") [get], [set]
```

The base uri for resolving links.

Definition at line 207 of file MarkdownRenderer.cs.

6.33.4.6 BoldFontFamily

```
FontFamily VectSharp.Markdown.MarkdownRenderer.BoldFontFamily = new FontFamily(FontFamily.StandardFontFamilies  
[get], [set])
```

The font family for bold text.

Definition at line 51 of file MarkdownRenderer.cs.

6.33.4.7 BoldItalicFontFamily

```
FontFamily VectSharp.Markdown.MarkdownRenderer.BoldItalicFontFamily = new FontFamily(FontFamily.StandardFontFa  
[get], [set])
```

The font family for bold italic text.

Definition at line 61 of file MarkdownRenderer.cs.

6.33.4.8 BoldUnderlineThickness

```
double VectSharp.Markdown.MarkdownRenderer.BoldUnderlineThickness = 0.15 [get], [set]
```

The thickness of underlines for bold text. This value will be multiplied by the font size of the element being underlined.

Definition at line 91 of file MarkdownRenderer.cs.

6.33.4.9 Bullets

```
List<Action<Graphics, Colour> > VectSharp.Markdown.MarkdownRenderer.Bullets [get]
```

Initial value:

```
= new List<Action<Graphics, Colour>>()
{
    (graphics, colour) =>
    {
        graphics.FillPath(new GraphicsPath().Arc(-0.5, 0, 0.25, 0, 2 * Math.PI), colour);
    },
    (graphics, colour) =>
    {
        graphics.StrokePath(new GraphicsPath().Arc(-0.5, 0, 0.25, 0, 2 * Math.PI), colour, 0.1);
    },
    (graphics, colour) =>
    {
        graphics.StrokeRectangle(-0.75, -0.25, 0.5, 0.5, colour, 0.1);
    },
}
```

Bullet points used for unordered lists. Each element of this list corresponds to the bullet for each level of list indentation. If the list indentation is greater than the number of elements in this list, the bullet points will be reused cyclically. Each element of this list is a method taking two arguments: the first is the [Graphics](#) object on which the bullet point should be drawn, while the second is the colour in which it should be painted. The method should draw the bullet point centered around the origin. The size of the bullet point will be multiplied by the current font size.

Definition at line 248 of file MarkdownRenderer.cs.

6.33.4.10 CodeBlockBackgroundColour

```
Colour VectSharp.Markdown.MarkdownRenderer.CodeBlockBackgroundColour = Colour.FromRgb(240,
240, 245) [get], [set]
```

The background colour for code blocks.

Definition at line 299 of file MarkdownRenderer.cs.

6.33.4.11 CodeFont

```
FontFamily VectSharp.Markdown.MarkdownRenderer.CodeFont = new FontFamily(FontFamily.StandardFontFamilies.Courier)
[get], [set]
```

The font family for code elements.

Definition at line 66 of file MarkdownRenderer.cs.

6.33.4.12 CodeFontBold

```
FontFamily VectSharp.Markdown.MarkdownRenderer.CodeFontBold = new FontFamily(FontFamily.StandardFontFamilies.C  
[get], [set])
```

The font family for bold code elements.

Definition at line 71 of file MarkdownRenderer.cs.

6.33.4.13 CodeFontBoldItalic

```
FontFamily VectSharp.Markdown.MarkdownRenderer.CodeFontBoldItalic = new FontFamily(FontFamily.StandardFontFami  
[get], [set])
```

The font family for bold italic code elements.

Definition at line 81 of file MarkdownRenderer.cs.

6.33.4.14 CodeFontItalic

```
FontFamily VectSharp.Markdown.MarkdownRenderer.CodeFontItalic = new FontFamily(FontFamily.StandardFontFamilies  
[get], [set])
```

The font family for italic code elements.

Definition at line 76 of file MarkdownRenderer.cs.

6.33.4.15 CodeInlineBackgroundColour

```
Colour VectSharp.Markdown.MarkdownRenderer.CodeInlineBackgroundColour = Colour.FromRgb(240,  
240, 240) [get], [set]
```

The background colour for code inlines.

Definition at line 294 of file MarkdownRenderer.cs.

6.33.4.16 CodeInlineMargin

```
double VectSharp.Markdown.MarkdownRenderer.CodeInlineMargin = 0.25 [get], [set]
```

The margin at the left and right of code inlines. This value will be multiplied by the current font size.

Definition at line 162 of file MarkdownRenderer.cs.

6.33.4.17 ForegroundColour

```
Colour VectSharp.Markdown.MarkdownRenderer.ForegroundColour = Colours.Black [get], [set]
```

The foreground colour for text elements.

Definition at line 269 of file MarkdownRenderer.cs.

6.33.4.18 HeaderFontSizeMultipliers

```
double [] VectSharp.Markdown.MarkdownRenderer.HeaderFontSizeMultipliers [get]
```

Initial value:

```
= new double[]  
    {  
        28 / 12.0, 22 / 12.0, 16 / 12.0, 14 / 12.0, 13 / 12.0, 12 / 12.0  
    }
```

The font size for elements at each header level. The values in this array will be multiplied by the [BaseFontSize](#).

Definition at line 28 of file MarkdownRenderer.cs.

6.33.4.19 HeaderLineColour

```
Colour VectSharp.Markdown.MarkdownRenderer.HeaderLineColour = Colour.FromRgb(180, 180, 180)  
[get], [set]
```

The colour of the line below headers.

Definition at line 279 of file MarkdownRenderer.cs.

6.33.4.20 HeaderLineThicknesses

```
double [] VectSharp.Markdown.MarkdownRenderer.HeaderLineThicknesses = new double[] { 1, 1, 0,  
0, 0, 0 } [get]
```

The thickness of the separator line after a header of each level. A value of 0 disables the line after headers of that level.

Definition at line 36 of file MarkdownRenderer.cs.

6.33.4.21 ImageMarginTolerance

```
double VectSharp.Markdown.MarkdownRenderer.ImageMarginTolerance = 25 [get], [set]
```

Images will be allowed to extend into the page bottom margin area by this amount before triggering a page break. This should be smaller than the bottom margin, otherwise images risk being cut off by the page boundary.

Definition at line 237 of file MarkdownRenderer.cs.

6.33.4.22 ImageMultiplier

```
double VectSharp.Markdown.MarkdownRenderer.ImageMultiplier = 1 [get], [set]
```

The size of images will be multiplied by this value to determine the actual size of the image on the page. For images that have a width or height attribute, this will be applied in addition to the [ImageUnitMultiplier](#). For images without width and height, only this multiplier will be applied.

Definition at line 227 of file MarkdownRenderer.cs.

6.33.4.23 ImageSideMargin

```
double VectSharp.Markdown.MarkdownRenderer.ImageSideMargin = 10 [get], [set]
```

The margin on the right of left-aligned images and on the left of right-aligned images.

Definition at line 232 of file MarkdownRenderer.cs.

6.33.4.24 ImageUnitMultiplier

```
double VectSharp.Markdown.MarkdownRenderer.ImageUnitMultiplier = 0.60714 [get], [set]
```

The size of images (as defined in the image's width and height attributes) will be multiplied by this value to determine the actual size of the image on the page. This has no effect on images without a width or height attribute.

Definition at line 222 of file MarkdownRenderer.cs.

6.33.4.25 ImageUriResolver

```
Func<string, string, (string, bool)> VectSharp.Markdown.MarkdownRenderer.ImageUriResolver =  
HTTUtils.ResolveImageURI [get], [set]
```

A method used to resolve (possibly remote) image uris into local file paths. The first argument of the method should be the image uri and the second argument the base uri used to resolve relative links. The method should return a tuple containing the path of the local file and a boolean value indicating whether the file has been fetched from a remote location and should be deleted after the program has finished using it.

Definition at line 202 of file MarkdownRenderer.cs.

6.33.4.26 IndentWidth

```
double VectSharp.Markdown.MarkdownRenderer.IndentWidth = 40 [get], [set]
```

The indentation width used for list items.

Definition at line 167 of file MarkdownRenderer.cs.

6.33.4.27 InsertedColour

```
Colour VectSharp.Markdown.MarkdownRenderer.InsertedColour = Colour.FromRgb(0, 158, 115) [get],  
[set]
```

The colour for text that has been styled as "inserted".

Definition at line 314 of file MarkdownRenderer.cs.

6.33.4.28 ItalicFontFamily

```
FontFamily VectSharp.Markdown.MarkdownRenderer.ItalicFontFamily = new FontFamily(FontFamily.StandardFontFamilies[0]) [get], [set]
```

The font family for italic text.

Definition at line 56 of file MarkdownRenderer.cs.

6.33.4.29 LinkColour

```
Colour VectSharp.Markdown.MarkdownRenderer.LinkColour = Colour.FromRgb(25, 140, 191) [get],  
[set]
```

The colour for hypertext links-

Definition at line 289 of file MarkdownRenderer.cs.

6.33.4.30 LinkUriResolver

```
Func<string, string> VectSharp.Markdown.MarkdownRenderer.LinkUriResolver = a => a [get],  
[set]
```

A method used to resolve link addresses. The argument of the method should be the absolute link, and the method should return the resolved address. This can be used to "redirect" links to a different target.

Definition at line 212 of file MarkdownRenderer.cs.

6.33.4.31 Margins

```
Margins VectSharp.Markdown.MarkdownRenderer.Margins = new Margins(55, 55, 55, 55) [get], [set]
```

The margins of the page.

Definition at line 96 of file MarkdownRenderer.cs.

6.33.4.32 MarkedColour

```
Colour VectSharp.Markdown.MarkdownRenderer.MarkedColour = Colour.FromRgb(213, 94, 0) [get], [set]
```

The colour for text that has been styled as "marked".

Definition at line 319 of file MarkdownRenderer.cs.

6.33.4.33 PageSize

```
Size VectSharp.Markdown.MarkdownRenderer.PageSize = new Size(595, 842) [get], [set]
```

The size of the page.

Definition at line 132 of file MarkdownRenderer.cs.

6.33.4.34 QuoteBlockBackgroundColour

```
Colour VectSharp.Markdown.MarkdownRenderer.QuoteBlockBackgroundColour = Colour.FromRgb(240, 240, 255) [get], [set]
```

The background colour for block quotes.

Definition at line 309 of file MarkdownRenderer.cs.

6.33.4.35 QuoteBlockBarColour

```
Colour VectSharp.Markdown.MarkdownRenderer.QuoteBlockBarColour = Colour.FromRgb(75, 152, 220) [get], [set]
```

The colour for the bar to the left of block quotes.

Definition at line 304 of file MarkdownRenderer.cs.

6.33.4.36 QuoteBlockBarWidth

```
double VectSharp.Markdown.MarkdownRenderer.QuoteBlockBarWidth = 5 [get], [set]
```

The thickness of the bar to the left of block quotes.

Definition at line 177 of file MarkdownRenderer.cs.

6.33.4.37 QuoteBlockIndentWidth

```
double VectSharp.Markdown.MarkdownRenderer.QuoteBlockIndentWidth = 30 [get], [set]
```

The indentation width used for block quotes.

Definition at line 172 of file MarkdownRenderer.cs.

6.33.4.38 RasterImageLoader

```
Func<string, RasterImage> VectSharp.Markdown.MarkdownRenderer.RasterImageLoader = null [get],  
[set]
```

A method used to load a raster image from a local file. The argument of the method should be the path of a local image file, and the method should return a [RasterImage](#) representing that file. For example, this can be achieved using the [RasterImageFile](#) class from the [VectSharp.MuPDFUtils](#) package. If this is null, only [SVG](#) images will be included in the document.

Definition at line 217 of file MarkdownRenderer.cs.

6.33.4.39 RegularFontFamily

```
FontFamily VectSharp.Markdown.MarkdownRenderer.RegularFontFamily = new FontFamily(FontFamily.StandardFontFamily)  
[get], [set]
```

The font family for regular text.

Definition at line 46 of file MarkdownRenderer.cs.

6.33.4.40 SpaceAfterHeading

```
double VectSharp.Markdown.MarkdownRenderer.SpaceAfterHeading = 0.25 [get], [set]
```

The space after each heading. This value will be multiplied by the font size of the heading.

Definition at line 157 of file MarkdownRenderer.cs.

6.33.4.41 SpaceAfterLine

```
double VectSharp.Markdown.MarkdownRenderer.SpaceAfterLine = 0.25 [get], [set]
```

The space after each line of text. This value will be multiplied by the [BaseFontSize](#).

Definition at line 147 of file MarkdownRenderer.cs.

6.33.4.42 SpaceAfterParagraph

```
double VectSharp.Markdown.MarkdownRenderer.SpaceAfterParagraph = 0.75 [get], [set]
```

The space after each text paragraph. This value will be multiplied by the [BaseFontSize](#).

Definition at line 142 of file MarkdownRenderer.cs.

6.33.4.43 SpaceBeforeHeading

```
double VectSharp.Markdown.MarkdownRenderer.SpaceBeforeHeading = 0.25 [get], [set]
```

The space before each heading. This value will be multiplied by the font size of the heading.

Definition at line 152 of file MarkdownRenderer.cs.

6.33.4.44 SpaceBeforeParagraph

```
double VectSharp.Markdown.MarkdownRenderer.SpaceBeforeParagraph = 0 [get], [set]
```

The space before each text paragraph. This value will be multiplied by the [BaseFontSize](#).

Definition at line 137 of file MarkdownRenderer.cs.

6.33.4.45 SubscriptShift

```
double VectSharp.Markdown.MarkdownRenderer.SubscriptShift = 0.14 [get], [set]
```

The downwards shift in the baseline for subscript elements. This value will be multiplied by the current font size.

Definition at line 192 of file MarkdownRenderer.cs.

6.33.4.46 SubSuperscriptFontSize

```
double VectSharp.Markdown.MarkdownRenderer.SubSuperscriptFontSize = 0.7 [get], [set]
```

The font size for subscripts and superscripts. This value will be multiplied by the current font size.

Definition at line 182 of file MarkdownRenderer.cs.

6.33.4.47 SuperscriptShift

```
double VectSharp.Markdown.MarkdownRenderer.SuperscriptShift = 0.33 [get], [set]
```

The upwards shift in the baseline for superscript elements. This value will be multiplied by the current font size.

Definition at line 187 of file MarkdownRenderer.cs.

6.33.4.48 SyntaxHighlighter

```
Func<string, string, List<List<FormattedString> > > VectSharp.Markdown.MarkdownRenderer.↵  
SyntaxHighlighter = VectSharp.Markdown.SyntaxHighlighter.GetSyntaxHighlightedLines [get],  
[set]
```

A method used for syntax highlighting. The first argument should be the source code to highlight, while the second parameter is the name of the language to use for the highlight. The method should return a list of lists of [FormattedStrings](#), with each list of [FormattedStrings](#) representing a line. For each code block, if the method returns `null`, no syntax highlighting is used.

Definition at line 242 of file MarkdownRenderer.cs.

6.33.4.49 TableCellMargins

```
Margins VectSharp.Markdown.MarkdownRenderer.TableCellMargins = new Margins(5, 0, 5, 0) [get],  
[set]
```

The margins for table cells.

Definition at line 101 of file MarkdownRenderer.cs.

6.33.4.50 TableHeaderRowSeparatorColour

```
Colour VectSharp.Markdown.MarkdownRenderer.TableHeaderRowSeparatorColour = Colours.Black [get], [set]
```

The colour for the line separating the table header row from normal rows.

Definition at line 324 of file MarkdownRenderer.cs.

6.33.4.51 TableHeaderRowSeparatorThickness

```
double VectSharp.Markdown.MarkdownRenderer.TableHeaderRowSeparatorThickness = 2 [get], [set]
```

The thickness of the line separating the table header row from normal rows.

Definition at line 334 of file MarkdownRenderer.cs.

6.33.4.52 TableHeaderSeparatorThickness

```
double VectSharp.Markdown.MarkdownRenderer.TableHeaderSeparatorThickness = 1 [get], [set]
```

The thickness of lines separating table rows from each other.

Definition at line 339 of file MarkdownRenderer.cs.

6.33.4.53 TableRowSeparatorColour

```
Colour VectSharp.Markdown.MarkdownRenderer.TableRowSeparatorColour = Colour.FromRgb(180, 180, 180) [get], [set]
```

The colour for lines separating table rows from each other.

Definition at line 329 of file MarkdownRenderer.cs.

6.33.4.54 TableVAlign

```
VerticalAlignment VectSharp.Markdown.MarkdownRenderer.TableVAlign = VerticalAlignment.Middle [get], [set]
```

The vertical alignment of table cells.

Definition at line 127 of file MarkdownRenderer.cs.

6.33.4.55 TaskListCheckedBullet

`Graphics VectSharp.Markdown.MarkdownRenderer.TaskListCheckedBullet` [get], [set]

Initial value:

```
= new Func<Graphics>(() =>
{
    Graphics tbr = new Graphics();
    GraphicsPath checkboxPath = new GraphicsPath().MoveTo(-0.7, -0.4).LineTo(-0.3, -0.4).Arc(-0.3,
-0.2, 0.2, 3 * Math.PI / 2, 2 * Math.PI).LineTo(-0.1, 0.2).Arc(-0.3, 0.2, 0.2, 0, Math.PI /
2).LineTo(-0.7, 0.4).Arc(-0.7, 0.2, 0.2, Math.PI / 2, Math.PI).LineTo(-0.9, -0.2).Arc(-0.7, -0.2,
0.2, Math.PI, 3 * Math.PI / 2).Close();
    tbr.FillPath(checkboxboxPath, Colour.FromRgb(240, 246, 249));
    tbr.StrokePath(checkboxboxPath, Colour.FromRgb(0, 114, 178), 0.075);
    GraphicsPath tickpath = new GraphicsPath().MoveTo(-0.75, -0.1).LineTo(-0.5, 0.15).LineTo(-0.1,
-0.4);
    tbr.StrokePath(new GraphicsPath().MoveTo(-0.5, 0.15).LineTo(-0.1, -0.4), Colour.FromRgb(240,
246, 249), 0.3, LineCaps.Round);
    tbr.StrokePath(tickpath, Colour.FromRgb(0, 158, 115), 0.2, LineCaps.Round);
    return tbr;
})()
```

The bullet used for checked task list items.

Definition at line 359 of file MarkdownRenderer.cs.

6.33.4.56 TaskListUncheckedBullet

`Graphics VectSharp.Markdown.MarkdownRenderer.TaskListUncheckedBullet` [get], [set]

Initial value:

```
= new Func<Graphics>(() =>
{
    Graphics tbr = new Graphics();
    GraphicsPath checkboxPath = new GraphicsPath().MoveTo(-0.7, -0.4).LineTo(-0.3, -0.4).Arc(-0.3,
-0.2, 0.2, 3 * Math.PI / 2, 2 * Math.PI).LineTo(-0.1, 0.2).Arc(-0.3, 0.2, 0.2, 0, Math.PI /
2).LineTo(-0.7, 0.4).Arc(-0.7, 0.2, 0.2, Math.PI / 2, Math.PI).LineTo(-0.9, -0.2).Arc(-0.7, -0.2,
0.2, Math.PI, 3 * Math.PI / 2).Close();
    tbr.FillPath(checkboxboxPath, Colour.FromRgb(240, 246, 249));
    tbr.StrokePath(checkboxboxPath, Colour.FromRgb(0, 114, 178), 0.075);
    return tbr;
})()
```

The bullet used for unchecked task list items.

Definition at line 344 of file MarkdownRenderer.cs.

6.33.4.57 ThematicBreakLineColour

`Colour VectSharp.Markdown.MarkdownRenderer.ThematicBreakLineColour` = `Colour.FromRgb(180, 180, 200)` [get], [set]

The colour for thematic break lines.

Definition at line 284 of file MarkdownRenderer.cs.

6.33.4.58 ThematicBreakThickness

```
double VectSharp.Markdown.MarkdownRenderer.ThematicBreakThickness = 2 [get], [set]
```

The thickness of thematic break lines.

Definition at line 41 of file MarkdownRenderer.cs.

6.33.4.59 UnderlineThickness

```
double VectSharp.Markdown.MarkdownRenderer.UnderlineThickness = 0.075 [get], [set]
```

The thickness of underlines. This value will be multiplied by the font size of the element being underlined.

Definition at line 86 of file MarkdownRenderer.cs.

The documentation for this class was generated from the following file:

- VectSharp.Markdown/MarkdownRenderer.cs

6.34 VectSharp.ThreeD.MaskedLightSource Class Reference

Represents a point light source with a stencil in front of it.

Inheritance diagram for VectSharp.ThreeD.MaskedLightSource:

Public Member Functions

- [MaskedLightSource](#) (double intensity, Point3D position, NormalizedVector3D direction, double distance, [GraphicsPath](#) mask, double maskOrientation, double triangulationResolution)
Creates a new [MaskedLightSource](#) by triangulating the specified [GraphicsPath](#).
- [MaskedLightSource](#) (double intensity, Point3D position, NormalizedVector3D direction, double distance, IEnumerable< [GraphicsPath](#) > triangulatedMask, double maskOrientation)
Creates a new [MaskedLightSource](#) using the specified triangulatedMask .
- [LightIntensity GetLightAt](#) (Point3D point)
Computes the light intensity at the specified point, without taking into account any obstructions.
- double [GetObstruction](#) (Point3D point, IEnumerable< Triangle3DElement > shadowingTriangles)
Determines the amount of obstruction of the light that results at point due to the specified shadowingTriangles .

Properties

- bool [CastsShadow](#) = true [get, set]
- Point3D [Position](#) [get]
The position of the light source.
- Point3D [Origin](#) [get]
The projection of the [Position](#) on the mask plane along the light's [Direction](#).
- NormalizedVector3D [Direction](#) [get]
The direction of the light.
- double [Distance](#) [get]
The distance between the light source and the mask plane.
- double [Intensity](#) [get, set]
The base intensity of the light.
- double [DistanceAttenuationExponent](#) = 2 [get, set]
An exponent determining how fast the light attenuates with increasing distance. Set to 0 to disable distance attenuation.
- double [AngleAttenuationExponent](#) = 1 [get, set]
An exponent determining how fast the light attenuates away from the light's axis. Set to 0 to disable angular attenuation.

6.34.1 Detailed Description

Represents a point light source with a stencil in front of it.

Definition at line 368 of file Lights.cs.

6.34.2 Constructor & Destructor Documentation

6.34.2.1 MaskedLightSource() [1/2]

```
VectSharp.ThreeD.MaskedLightSource.MaskedLightSource (
    double intensity,
    Point3D position,
    NormalizedVector3D direction,
    double distance,
    GraphicsPath mask,
    double maskOrientation,
    double triangulationResolution )
```

Creates a new [MaskedLightSource](#) by triangulating the specified [GraphicsPath](#).

Parameters

<i>intensity</i>	The base intensity of the light.
<i>position</i>	The position of the light source.
<i>direction</i>	The direction of the light.
<i>distance</i>	The distance between the light source and the mask plane.
<i>mask</i>	A GraphicsPath representing the transparent part of the mask.
<i>maskOrientation</i>	An angle in radians determining the orientation of the 2D mask in the mask plane.
<i>triangulationResolution</i>	The resolution to use to triangulate the <i>mask</i> .

Definition at line 420 of file Lights.cs.

6.34.2.2 MaskedLightSource() [2/2]

```
VectSharp.ThreeD.MaskedLightSource.MaskedLightSource (
    double intensity,
    Point3D position,
    NormalizedVector3D direction,
    double distance,
    IEnumerable< GraphicsPath > triangulatedMask,
    double maskOrientation )
```

Creates a new [MaskedLightSource](#) using the specified *triangulatedMask* .

Parameters

<i>intensity</i>	The base intensity of the light.
<i>position</i>	The position of the light source.
<i>direction</i>	The direction of the light.
<i>distance</i>	The distance between the light source and the mask plane.
<i>triangulatedMask</i>	A collection of GraphicsPaths representing the transparent part of the mask. Each GraphicsPath should represent a single triangle.
<i>maskOrientation</i>	An angle in radians determining the orientation of the 2D mask in the mask plane.

Definition at line 434 of file Lights.cs.

6.34.3 Property Documentation

6.34.3.1 AngleAttenuationExponent

```
double VectSharp.ThreeD.MaskedLightSource.AngleAttenuationExponent = 1 [get], [set]
```

An exponent determining how fast the light attenuates away from the light's axis. Set to 0 to disable angular attenuation.

Definition at line 408 of file Lights.cs.

6.34.3.2 Direction

```
NormalizedVector3D VectSharp.ThreeD.MaskedLightSource.Direction [get]
```

The direction of the light.

Definition at line 386 of file Lights.cs.

6.34.3.3 Distance

```
double VectSharp.ThreeD.MaskedLightSource.Distance [get]
```

The distance between the light source and the mask plane.

Definition at line 391 of file Lights.cs.

6.34.3.4 DistanceAttenuationExponent

```
double VectSharp.ThreeD.MaskedLightSource.DistanceAttenuationExponent = 2 [get], [set]
```

An exponent determining how fast the light attenuates with increasing distance. Set to 0 to disable distance attenuation.

Definition at line 403 of file Lights.cs.

6.34.3.5 Intensity

```
double VectSharp.ThreeD.MaskedLightSource.Intensity [get], [set]
```

The base intensity of the light.

Definition at line 398 of file Lights.cs.

6.34.3.6 Origin

```
Point3D VectSharp.ThreeD.MaskedLightSource.Origin [get]
```

The projection of the [Position](#) on the mask plane along the light's [Direction](#).

Definition at line 381 of file Lights.cs.

6.34.3.7 Position

```
Point3D VectSharp.ThreeD.MaskedLightSource.Position [get]
```

The position of the light source.

Definition at line 376 of file Lights.cs.

The documentation for this class was generated from the following file:

- VectSharp.ThreeD/Lights.cs

6.35 VectSharp.ThreeD.ObjectFactory Class Reference

A static class containing methods to create complex 3D objects.

Static Public Member Functions

- static List< Element3D > [CreateCube](#) (Point3D center, double size, IEnumerable< [IMaterial](#) > fill, string tag=null, int zIndex=0)
Creates a cube.
- static List< Element3D > [CreateCuboid](#) (Point3D center, double sizeX, double sizeY, double sizeZ, IEnumerable< [IMaterial](#) > fill, string tag=null, int zIndex=0)
Creates a cuboid.
- static List< Element3D > [CreateRectangle](#) (Point3D point1, Point3D point2, Point3D point3, Point3D point4, IEnumerable< [IMaterial](#) > fill, string tag=null, int zIndex=0)
Creates a quadrilater. All the vertices need not be coplanar.
- static List< Element3D > [CreateRectangle](#) (Point3D point1, Point3D point2, Point3D point3, Point3D point4, NormalizedVector3D point1Normal, NormalizedVector3D point2Normal, NormalizedVector3D point3Normal, NormalizedVector3D point4Normal, IEnumerable< [IMaterial](#) > fill, string tag=null, int zIndex=0)
Creates a quadrilater, specifying the vertex normals at the four vertices. All the vertices need not be coplanar.
- static List< Element3D > [CreateSphere](#) (Point3D center, double radius, int steps, IEnumerable< [IMaterial](#) > fill, string tag=null, int zIndex=0)
Creates a sphere.
- static List< Element3D > [CreateTetrahedron](#) (Point3D center, double radius, IEnumerable< [IMaterial](#) > fill, string tag=null, int zIndex=0)
Creates a tetrahedron inscribed in a sphere.
- static List< Element3D > [CreatePolygon](#) ([GraphicsPath](#) polygon2D, double triangulationResolution, Point3D origin, NormalizedVector3D xAxis, NormalizedVector3D yAxis, bool reverseTriangles, IEnumerable< [IMaterial](#) > fill, string tag=null, int zIndex=0)
Creates a flat polygon.
- static List< Element3D > [CreatePrism](#) ([GraphicsPath](#) polygonBase2D, double triangulationResolution, Point3D bottomOrigin, Point3D topOrigin, NormalizedVector3D baseXAxis, NormalizedVector3D baseYAxis, IEnumerable< [IMaterial](#) > fill, string tag=null, int zIndex=0)
Creates a prism with the specified base.
- static List< Element3D > [CreateWireframe](#) (IEnumerable< Element3D > object3D, [Colour](#) colour, double thickness=1, [LineCaps](#) lineCap=[LineCaps.Butt](#), [LineDash?](#) lineDash=null, string tag=null, int zIndex=0)
Creates a wireframe from a collection of Element3Ds.
- static List< Element3D > [CreatePoints](#) (IEnumerable< Element3D > object3D, [Colour](#) colour, double diameter=1, string tag=null, int zIndex=0)
Obtains a list of Point3DElement corresponding to the vertices of a list of Element3Ds.

6.35.1 Detailed Description

A static class containing methods to create complex 3D objects.

Definition at line 11 of file ObjectFactory.cs.

6.35.2 Member Function Documentation

6.35.2.1 CreateCube()

```
static List<Element3D> VectSharp.ThreeD.ObjectFactory.CreateCube (
    Point3D center,
    double size,
    IEnumerable< IMaterial > fill,
    string tag = null,
    int zIndex = 0 ) [static]
```

Creates a cube.

Parameters

<i>center</i>	The centre of the cube.
<i>size</i>	The length of each side of the cube.
<i>fill</i>	A collection of materials that will be applied to the Triangle3DElements returned by this method.
<i>tag</i>	A tag that will be applied to the Triangle3DElements returned by this method.
<i>zIndex</i>	A z-index that will be applied to the Triangle3DElements returned by this method.

Returns

A list of Triangle3DElements that constitute the cube.

Definition at line 22 of file ObjectFactory.cs.

6.35.2.2 CreateCuboid()

```
static List<Element3D> VectSharp.ThreeD.ObjectFactory.CreateCuboid (
    Point3D center,
    double sizeX,
    double sizeY,
    double sizeZ,
    IEnumerable< IMaterial > fill,
    string tag = null,
    int zIndex = 0 ) [static]
```

Creates a cuboid.

Parameters

<i>center</i>	The centre of the cube.
<i>sizeX</i>	The length of the sides of the cube parallel to the x axis.
<i>sizeY</i>	The length of the sides of the cube parallel to the y axis.
<i>sizeZ</i>	The length of the sides of the cube parallel to the z axis.
<i>fill</i>	A collection of materials that will be applied to the Triangle3DElements returned by this method.
<i>tag</i>	A tag that will be applied to the Triangle3DElements returned by this method.
<i>zIndex</i>	A z-index that will be applied to the Triangle3DElements returned by this method.

Returns

A list of Triangle3DElements that constitute the cuboid.

Definition at line 38 of file ObjectFactory.cs.

6.35.2.3 CreatePoints()

```
static List<Element3D> VectSharp.ThreeD.ObjectFactory.CreatePoints (
    IEnumerable< Element3D > object3D,
    Colour colour,
    double diameter = 1,
    string tag = null,
    int zIndex = 0 ) [static]
```

Obtains a list of Point3DElement corresponding to the vertices of a list of Element3Ds.

Parameters

<i>object3D</i>	The collection of Element3Ds. Point3DElements are ignored.
<i>colour</i>	The colour of the Point3DElements returned by this method.
<i>diameter</i>	The diameter of the Point3DElements returned by this method.
<i>tag</i>	A tag that will be applied to the Point3DElements returned by this method.
<i>zIndex</i>	A z-index that will be applied to the Point3DElements returned by this method.

Returns

A list of Point3DElements corresponding to the vertices of the Element3Ds.

Definition at line 395 of file ObjectFactory.cs.

6.35.2.4 CreatePolygon()

```
static List<Element3D> VectSharp.ThreeD.ObjectFactory.CreatePolygon (
    GraphicsPath polygon2D,
    double triangulationResolution,
    Point3D origin,
    NormalizedVector3D xAxis,
    NormalizedVector3D yAxis,
    bool reverseTriangles,
    IEnumerable< IMaterial > fill,
    string tag = null,
    int zIndex = 0 ) [static]
```

Creates a flat polygon.

Parameters

<i>polygon2D</i>	A 2D GraphicsPath representing the polygon.
<i>triangulationResolution</i>	The resolution that will be used to linearise curve segments in the GraphicsPath .
<i>origin</i>	A Point3D that will correspond to the origin of the 2D reference system.
<i>xAxis</i>	A NormalizedVector3D that will correspond to the x axis of the 2D reference system. This will be orthonormalised to the <i>yAxis</i> .
<i>yAxis</i>	A NormalizedVector3D that will correspond to the y axis of the 2D reference system.
<i>reverseTriangles</i>	Indicates whether the order of the points (and thus the normals) of all the triangles returned by this method should be reversed.
<i>fill</i>	A collection of materials that will be applied to the Triangle3DElements returned by this method.
<i>tag</i>	A tag that will be applied to the Triangle3DElements returned by this method.
<i>zIndex</i>	A z-index that will be applied to the Triangle3DElements returned by this method.

Returns

A list of Triangle3DElements that constitute the polygon.

Definition at line 256 of file ObjectFactory.cs.

6.35.2.5 CreatePrism()

```
static List<Element3D> VectSharp.ThreeD.ObjectFactory.CreatePrism (
    GraphicsPath polygonBase2D,
    double triangulationResolution,
    Point3D bottomOrigin,
    Point3D topOrigin,
    NormalizedVector3D baseXAxis,
    NormalizedVector3D baseYAxis,
    IEnumerable< IMaterial > fill,
    string tag = null,
    int zIndex = 0 ) [static]
```

Creates a prism with the specified base.

Parameters

<i>polygonBase2D</i>	A 2D GraphicsPath representing the base of the prism.
<i>triangulationResolution</i>	The resolution that will be used to linearise curve segments in the GraphicsPath .
<i>bottomOrigin</i>	A Point3D that will correspond to the origin of the 2D reference system of the bottom base.
<i>topOrigin</i>	A Point3D that will correspond to the origin of the 2D reference system of the top base.
<i>baseXAxis</i>	A NormalizedVector3D that will correspond to the x axis of the 2D reference system of the bases. This will be orthonormalised to the <i>baseYAxis</i> .
<i>baseYAxis</i>	A NormalizedVector3D that will correspond to the y axis of the 2D reference system of the bases.
<i>fill</i>	A collection of materials that will be applied to the Triangle3DElements returned by this method.
<i>tag</i>	A tag that will be applied to the Triangle3DElements returned by this method.
<i>zIndex</i>	A z-index that will be applied to the Triangle3DElements returned by this method.

Returns

A list of Triangle3DElements that constitute the prism.

Definition at line 297 of file ObjectFactory.cs.

6.35.2.6 CreateRectangle() [1/2]

```
static List<Element3D> VectSharp.ThreeD.ObjectFactory.CreateRectangle (
    Point3D point1,
    Point3D point2,
    Point3D point3,
    Point3D point4,
    IEnumerable< IMaterial > fill,
    string tag = null,
    int zIndex = 0 ) [static]
```

Creates a quadrilater. All the vertices need not be coplanar.

Parameters

<i>point1</i>	The first vertex of the quadrilater.
<i>point2</i>	The second vertex of the quadrilater.
<i>point3</i>	The third vertex of the quadrilater.
<i>point4</i>	The fourth vertex of the quadrilater.
<i>fill</i>	A collection of materials that will be applied to the Triangle3DElements returned by this method.
<i>tag</i>	A tag that will be applied to the Triangle3DElements returned by this method.
<i>zIndex</i>	A z-index that will be applied to the Triangle3DElements returned by this method.

Returns

A list containing two Triangle3DElements representing the quadrilater.

Definition at line 76 of file ObjectFactory.cs.

6.35.2.7 CreateRectangle() [2/2]

```
static List<Element3D> VectSharp.ThreeD.ObjectFactory.CreateRectangle (
    Point3D point1,
    Point3D point2,
    Point3D point3,
    Point3D point4,
    NormalizedVector3D point1Normal,
    NormalizedVector3D point2Normal,
    NormalizedVector3D point3Normal,
    NormalizedVector3D point4Normal,
    IEnumerable< IMaterial > fill,
    string tag = null,
    int zIndex = 0 ) [static]
```

Creates a quadrilater, specifying the vertex normals at the four vertices. All the vertices need not be coplanar.

Parameters

<i>point1</i>	The first vertex of the quadrilater.
<i>point2</i>	The second vertex of the quadrilater.
<i>point3</i>	The third vertex of the quadrilater.
<i>point4</i>	The fourth vertex of the quadrilater.
<i>point1Normal</i>	The vertex normal at the first vertex of the quadrilater.
<i>point2Normal</i>	The vertex normal at the second vertex of the quadrilater.
<i>point3Normal</i>	The vertex normal at the third vertex of the quadrilater.
<i>point4Normal</i>	The vertex normal at the fourth vertex of the quadrilater.
<i>fill</i>	A collection of materials that will be applied to the Triangle3DElements returned by this method.
<i>tag</i>	A tag that will be applied to the Triangle3DElements returned by this method.
<i>zIndex</i>	A z-index that will be applied to the Triangle3DElements returned by this method.

Returns

A list containing two Triangle3DElements representing the quadrilater.

Definition at line 106 of file ObjectFactory.cs.

6.35.2.8 CreateSphere()

```
static List<Element3D> VectSharp.ThreeD.ObjectFactory.CreateSphere (
    Point3D center,
    double radius,
    int steps,
    IEnumerable< IMaterial > fill,
    string tag = null,
    int zIndex = 0 ) [static]
```

Creates a sphere.

Parameters

<i>center</i>	The centre of the sphere.
<i>radius</i>	The radius of the sphere.
<i>steps</i>	The number of meridians and parallels to use when generating the sphere.
<i>fill</i>	A collection of materials that will be applied to the Triangle3DElements returned by this method.
<i>tag</i>	A tag that will be applied to the Triangle3DElements returned by this method.
<i>zIndex</i>	A z-index that will be applied to the Triangle3DElements returned by this method.

Returns

A list of Triangle3DElements that constitute the sphere.

Definition at line 131 of file ObjectFactory.cs.

6.35.2.9 CreateTetrahedron()

```
static List<Element3D> VectSharp.ThreeD.ObjectFactory.CreateTetrahedron (
    Point3D center,
    double radius,
    IEnumerable< IMaterial > fill,
    string tag = null,
    int zIndex = 0 ) [static]
```

Creates a tetrahedron inscribed in a sphere.

Parameters

<i>center</i>	The centre of the tetrahedron.
<i>radius</i>	The radius of the sphere in which the tetrahedron is inscribed.
<i>fill</i>	A collection of materials that will be applied to the Triangle3DElements returned by this method.
<i>tag</i>	A tag that will be applied to the Triangle3DElements returned by this method.
<i>zIndex</i>	A z-index that will be applied to the Triangle3DElements returned by this method.

Returns

A list of Triangle3DElements that constitute the sphere.

Definition at line 221 of file ObjectFactory.cs.

6.35.2.10 CreateWireframe()

```
static List<Element3D> VectSharp.ThreeD.ObjectFactory.CreateWireframe (
    IEnumerable< Element3D > object3D,
    Colour colour,
    double thickness = 1,
    LineCaps lineCap = LineCaps.Butt,
    LineDash? lineDash = null,
    string tag = null,
    int zIndex = 0 ) [static]
```

Creates a wireframe from a collection of Element3Ds.

Parameters

<i>object3D</i>	The collection of Element3Ds. Line3DElements and Point3DElements are ignored.
<i>colour</i>	The colour of the Line3DElements returned by this method.
<i>thickness</i>	The thickness of the Line3DElements returned by this method.
<i>lineCap</i>	The line cap of the Line3DElements returned by this method.
<i>lineDash</i>	The line dash of the Line3DElements returned by this method.
<i>tag</i>	A tag that will be applied to the Line3DElements returned by this method.
<i>zIndex</i>	A z-index that will be applied to the Line3DElements returned by this method.

Returns

A list of Line3DElements that constitute the wireframe.

Definition at line 353 of file ObjectFactory.cs.

The documentation for this class was generated from the following file:

- VectSharp.ThreeD/ObjectFactory.cs

6.36 VectSharp.Page Class Reference

Represents a [Graphics](#) object with a width and height.

Public Member Functions

- [Page](#) (double width, double height)
Create a new page.
- void [Crop](#) ([Point](#) topLeft, [Size](#) size)
Translate and resize the [Page](#) so that it displays the rectangle defined by topLeft and size .

Properties

- double [Width](#) [get, set]
Width of the page.
- double [Height](#) [get, set]
Height of the page.
- [Graphics](#) [Graphics](#) [get, set]
[Graphics](#) surface of the page.
- [Colour](#) [Background](#) = [Colour.FromRgba](#)(255, 255, 255, 0) [get, set]
Background colour of the page.

6.36.1 Detailed Description

Represents a [Graphics](#) object with a width and height.

Definition at line 47 of file Document.cs.

6.36.2 Constructor & Destructor Documentation

6.36.2.1 Page()

```
VectSharp.Page.Page (
    double width,
    double height )
```

Create a new page.

Parameters

<i>width</i>	The width of the page.
<i>height</i>	The height of the page.

Definition at line 74 of file Document.cs.

6.36.3 Member Function Documentation

6.36.3.1 Crop()

```
void VectSharp.Page.Crop (  
    Point topLeft,  
    Size size )
```

Translate and resize the [Page](#) so that it displays the rectangle defined by *topLeft* and *size* .

Parameters

<i>topLeft</i>	The top left corner of the area to include in the page.
<i>size</i>	The size of the area to include in the page.

Definition at line 88 of file Document.cs.

6.36.4 Property Documentation

6.36.4.1 Background

```
Colour VectSharp.Page.Background = Colour.FromRgba(255, 255, 255, 0) [get], [set]
```

Background colour of the page.

Definition at line 67 of file Document.cs.

6.36.4.2 Graphics

```
Graphics VectSharp.Page.Graphics [get], [set]
```

[Graphics](#) surface of the page.

Definition at line 62 of file Document.cs.

6.36.4.3 Height

```
double VectSharp.Page.Height [get], [set]
```

Height of the page.

Definition at line 57 of file Document.cs.

6.36.4.4 Width

```
double VectSharp.Page.Width [get], [set]
```

Width of the page.

Definition at line 52 of file Document.cs.

The documentation for this class was generated from the following file:

- VectSharp/Document.cs

6.37 VectSharp.ThreeD.ParallelLightSource Class Reference

Represents a parallel light source.

Inheritance diagram for VectSharp.ThreeD.ParallelLightSource:

Public Member Functions

- [ParallelLightSource](#) (double intensity, NormalizedVector3D direction)
Creates a new [ParallelLightSource](#) instance.
- [LightIntensity GetLightAt](#) (Point3D point)
Computes the light intensity at the specified point, without taking into account any obstructions.
- double [GetObstruction](#) (Point3D point, IEnumerable< Triangle3DElement > shadowingTriangles)
Determines the amount of obstruction of the light that results at point due to the specified shadowingTriangles .

Properties

- double [Intensity](#) [get, set]
The intensity of the light.
- NormalizedVector3D [Direction](#) [get]
The direction along which the light travels.
- NormalizedVector3D [ReverseDirection](#) [get]
The reverse of [Direction](#).
- bool [CastsShadow](#) = true [get, set]

6.37.1 Detailed Description

Represents a parallel light source.

Definition at line 109 of file Lights.cs.

6.37.2 Constructor & Destructor Documentation

6.37.2.1 ParallelLightSource()

```
VectSharp.ThreeD.ParallelLightSource.ParallelLightSource (  
    double intensity,  
    NormalizedVector3D direction )
```

Creates a new [ParallelLightSource](#) instance.

Parameters

<i>intensity</i>	The intensity of the light.
<i>direction</i>	The direction along which the light travels.

Definition at line 134 of file Lights.cs.

6.37.3 Property Documentation

6.37.3.1 Direction

```
NormalizedVector3D VectSharp.ThreeD.ParallelLightSource.Direction [get]
```

The direction along which the light travels.

Definition at line 119 of file Lights.cs.

6.37.3.2 Intensity

```
double VectSharp.ThreeD.ParallelLightSource.Intensity [get], [set]
```

The intensity of the light.

Definition at line 114 of file Lights.cs.

6.37.3.3 ReverseDirection

```
NormalizedVector3D VectSharp.ThreeD.ParallelLightSource.ReverseDirection [get]
```

The reverse of [Direction](#).

Definition at line 124 of file Lights.cs.

The documentation for this class was generated from the following file:

- VectSharp.ThreeD/Lights.cs

6.38 VectSharp.SVG.Parser Class Reference

Contains methods to read an [SVG](#) image file.

Static Public Member Functions

- static [Page ParseSVGURI](#) (string uri, bool ignored=false)
Parses an [SVG](#) image URI.
- static [Page FromString](#) (string svgSource)
Parses [SVG](#) source into a [Page](#) containing the image represented by the code.
- static [Page FromFile](#) (string fileName)
Parses an [SVG](#) image file into a [Page](#) containing the image.
- static [Page FromStream](#) (Stream svgSourceStream)
Parses an stream containing [SVG](#) source code into a [Page](#) containing the image represented by the code.

Static Public Attributes

- static Func< string, bool, [Page](#) > [ParseImageURI](#)
A function that takes as input an image URI and a boolean value indicating whether the image should be interpolated, and returns a [Page](#) object containing the image. By default, this is equal to [ParseSVGURI](#), i.e. it is only able to parse [SVG](#) images. If you wish to enable the parsing of other formats, you should install the "VectSharp.MuPDFUtils" NuGet package and enable the parser in your program by doing something like:

6.38.1 Detailed Description

Contains methods to read an [SVG](#) image file.

Definition at line 32 of file SVGParser.cs.

6.38.2 Member Function Documentation

6.38.2.1 FromFile()

```
static Page VectSharp.SVG.Parser.FromFile (  
    string fileName ) [static]
```

Parses an [SVG](#) image file into a [Page](#) containing the image.

Parameters

<i>fileName</i>	The path to the SVG image file.
-----------------	---

Returns

A [Page](#) containing the image represented by the file.

Definition at line 154 of file SVGParser.cs.

6.38.2.2 FromStream()

```
static Page VectSharp.SVG.Parser.FromStream (  
    Stream svgSourceStream ) [static]
```

Parses a stream containing [SVG](#) source code into a [Page](#) containing the image represented by the code.

Parameters

<i>svgSourceStream</i>	The stream containing SVG source code.
------------------------	--

Returns

A [Page](#) containing the image represented by the *svgSourceStream* .

Definition at line 164 of file SVGParser.cs.

6.38.2.3 FromString()

```
static Page VectSharp.SVG.Parser.FromString (
    string svgSource ) [static]
```

Parses [SVG](#) source into a [Page](#) containing the image represented by the code.

Parameters

<i>svgSource</i>	The SVG source code.
------------------	--------------------------------------

Returns

A [Page](#) containing the image represented by the *svgSource* .

Definition at line 102 of file SVGParser.cs.

6.38.2.4 ParseSVGURI()

```
static Page VectSharp.SVG.Parser.ParseSVGURI (
    string uri,
    bool ignored = false ) [static]
```

Parses an [SVG](#) image URI.

Parameters

<i>uri</i>	The image URI to parse.
<i>ignored</i>	This value is ignored and is only needed for compatibility.

Returns

A [Page](#) containing the parsed [SVG](#) image, or null.

Definition at line 53 of file SVGParser.cs.

6.38.3 Member Data Documentation

6.38.3.1 ParseImageURI

```
Func<string, bool, Page> VectSharp.SVG.Parser.ParseImageURI [static]
```

A function that takes as input an image URI and a boolean value indicating whether the image should be interpolated, and returns a [Page](#) object containing the image. By default, this is equal to [ParseSVGURI](#), i.e. it is only able

to parse [SVG](#) images. If you wish to enable the parsing of other formats, you should install the "VectSharp.MuP↵
DFUtils" NuGet package and enable the parser in your program by doing something like:

```
VectSharp.SVG.Parser.ParseImageURI = VectSharp.MuPDFUtils.ImageURIParser.Parser(VectShar
```

Definition at line 45 of file SVGParser.cs.

The documentation for this class was generated from the following file:

- VectSharp.SVG/SVGParser.cs

6.39 VectSharp.PDF.PDFContextInterpreter Class Reference

Contains methods to render a [Document](#) as a [PDF](#) document.

Public Types

- enum `TextOptions` { `TextOptions.SubsetFont`, `TextOptions.ConvertIntoPaths` }

Defines whether the used fonts should be included in the file.

Static Public Member Functions

- static void [SaveAsPDF](#) (this [Document](#) document, string fileName, [TextOptions](#) textOption=[TextOptions.SubsetFonts](#), bool compressStreams=true, Dictionary< string, string > linkDestinations=null)

Save the document to a **PDF** file.

- static void [SaveAsPDF](#) (this [Document](#) document, Stream stream, [TextOptions](#) textOption=[TextOptions.SubsetFonts](#), bool compressStreams=true, Dictionary< string, string > linkDestinations=null)

Save the document to a **PDF** stream.

6.39.1 Detailed Description

Contains methods to render a [Document](#) as a [PDF](#) document.

Definition at line 585 of file PDFContext.cs.

6.39.2 Member Enumeration Documentation

6.39.2.1 TextOptions

```
enum VectSharp.PDF.PDFContextInterpreter.TextOptions [strong]
```

Defines whether the used fonts should be included in the file.

Enumerator

SubsetFonts	Embeds subsetted font files containing only the glyphs for the characters that have been used.
ConvertIntoPaths	Does not embed any font file and converts all text items into paths.

Definition at line 795 of file PDFContext.cs.

6.39.3 Member Function Documentation

6.39.3.1 SaveAsPDF() [1/2]

```
static void VectSharp.PDF.PDFContextInterpreter.SaveAsPDF (
    this Document document,
    Stream stream,
    TextOptions textOption = TextOptions.SubsetFonts,
    bool compressStreams = true,
    Dictionary< string, string > linkDestinations = null ) [static]
```

Save the document to a [PDF](#) stream.

Parameters

<i>document</i>	The Document to save.
<i>stream</i>	The stream to which the PDF data will be written.
<i>textOption</i>	Defines whether the used fonts should be included in the file.
<i>compressStreams</i>	Indicates whether the streams in the PDF file should be compressed.
<i>linkDestinations</i>	A dictionary associating element tags to link targets. If this is provided, objects that have been drawn with a tag contained in the dictionary will become hyperlink to the destination specified in the dictionary. If the destination starts with a hash (#), it is interpreted as the tag of another object in the current document; otherwise, it is interpreted as an external URI.

Definition at line 818 of file PDFContext.cs.

6.39.3.2 SaveAsPDF() [2/2]

```
static void VectSharp.PDF.PDFContextInterpreter.SaveAsPDF (
    this Document document,
    string fileName,
    TextOptions textOption = TextOptions.SubsetFonts,
    bool compressStreams = true,
    Dictionary< string, string > linkDestinations = null ) [static]
```

Save the document to a [PDF](#) file.

Parameters

<i>document</i>	The Document to save.
<i>fileName</i>	The full path to the file to save. If it exists, it will be overwritten.
<i>textOption</i>	Defines whether the used fonts should be included in the file.
<i>compressStreams</i>	Indicates whether the streams in the PDF file should be compressed.
<i>linkDestinations</i>	A dictionary associating element tags to link targets. If this is provided, objects that have been drawn with a tag contained in the dictionary will become hyperlink to the destination specified in the dictionary. If the destination starts with a hash (#), it is interpreted as the tag of another object in the current document; otherwise, it is interpreted as an external URI.

Definition at line 784 of file PDFContext.cs.

The documentation for this class was generated from the following file:

- VectSharp.PDF/PDFContext.cs

6.40 VectSharp.ThreeD.PhongMaterial Class Reference

Represents a material that uses a Phong reflection model to determine the colour of the material based on the light sources that hit it.

Inheritance diagram for VectSharp.ThreeD.PhongMaterial:

Public Member Functions

- [PhongMaterial](#) ([Colour](#) colour)
Creates a new [PhongMaterial](#) instance.
- [Colour GetColour](#) (Point3D point, NormalizedVector3D surfaceNormal, Camera camera, IList< [ILightSource](#) > lights, IList< double > obstructions)
Obtains the [Colour](#) at the specified point.

Properties

- **Colour** `Colour` [get]
The base colour of the material.
- double **AmbientReflectionCoefficient** = 1 [get, set]
A coefficient determining how much ambient light is reflected by the material.
- double **DiffuseReflectionCoefficient** = 1 [get, set]
A coefficient determining how much directional light is reflected by the material.
- double **SpecularReflectionCoefficient** = 1 [get, set]
A coefficient determining the intensity of specular highlights.
- double **SpecularShininess** = 1 [get, set]
A coefficient determining the extent of specular highlights.

6.40.1 Detailed Description

Represents a material that uses a Phong reflection model to determine the colour of the material based on the light sources that hit it.

Definition at line 57 of file Materials.cs.

6.40.2 Constructor & Destructor Documentation

6.40.2.1 PhongMaterial()

```
VectSharp.ThreeD.PhongMaterial.PhongMaterial (
    Colour colour )
```

Creates a new **PhongMaterial** instance.

Parameters

<code>colour</code>	The base colour of the material.
---------------------	----------------------------------

Definition at line 94 of file Materials.cs.

6.40.3 Property Documentation

6.40.3.1 AmbientReflectionCoefficient

```
double VectSharp.ThreeD.PhongMaterial.AmbientReflectionCoefficient = 1 [get], [set]
```

A coefficient determining how much ambient light is reflected by the material.

Definition at line 73 of file Materials.cs.

6.40.3.2 Colour

```
Colour VectSharp.ThreeD.PhongMaterial.Colour [get]
```

The base colour of the material.

Definition at line 62 of file Materials.cs.

6.40.3.3 DiffuseReflectionCoefficient

```
double VectSharp.ThreeD.PhongMaterial.DiffuseReflectionCoefficient = 1 [get], [set]
```

A coefficient determining how much directional light is reflected by the material.

Definition at line 78 of file Materials.cs.

6.40.3.4 SpecularReflectionCoefficient

```
double VectSharp.ThreeD.PhongMaterial.SpecularReflectionCoefficient = 1 [get], [set]
```

A coefficient determining the intensity of specular highlights.

Definition at line 83 of file Materials.cs.

6.40.3.5 SpecularShininess

```
double VectSharp.ThreeD.PhongMaterial.SpecularShininess = 1 [get], [set]
```

A coefficient determining the extent of specular highlights.

Definition at line 88 of file Materials.cs.

The documentation for this class was generated from the following file:

- VectSharp.ThreeD/Materials.cs

6.41 VectSharp.Point Struct Reference

Represents a point relative to an origin in the top-left corner.

Public Member Functions

- [Point](#) (double x, double y)
Create a new [Point](#).
- double [Modulus](#) ()
Computes the modulus of the vector represented by the [Point](#).
- [Point Normalize](#) ()
Normalises a [Point](#).
- bool [IsEqual](#) ([Point](#) p2, double tolerance)
Checks whether this [Point](#) is equal to another [Point](#), up to a specified tolerance.

Public Attributes

- double [X](#)
Horizontal (x) coordinate, measured to the right of the origin.
- double [Y](#)
Vertical (y) coordinate, measured to the bottom of the origin.

6.41.1 Detailed Description

Represents a point relative to an origin in the top-left corner.

Definition at line 25 of file Point.cs.

6.41.2 Constructor & Destructor Documentation

6.41.2.1 Point()

```
VectSharp.Point.Point (  
    double x,  
    double y )
```

Create a new [Point](#).

Parameters

<i>x</i>	The horizontal (x) coordinate.
<i>y</i>	The vertical (y) coordinate.

Definition at line 42 of file Point.cs.

6.41.3 Member Function Documentation

6.41.3.1 IsEqual()

```
bool VectSharp.Point.IsEqual (
    Point p2,
    double tolerance )
```

Checks whether this [Point](#) is equal to another [Point](#), up to a specified tolerance.

Parameters

<i>p2</i>	The Point to compare.
<i>tolerance</i>	The tolerance threshold.

Returns

`true` if both coordinates of the [Points](#) are closer than *tolerance* or if their relative difference (i.e. $(a - b) / (a + b) * 2$) is smaller than *tolerance*. `false` otherwise.

Definition at line 73 of file Point.cs.

6.41.3.2 Modulus()

```
double VectSharp.Point.Modulus ( )
```

Computes the modulus of the vector represented by the [Point](#).

Returns

The modulus of the vector represented by the [Point](#).

Definition at line 52 of file Point.cs.

6.41.3.3 Normalize()

```
Point VectSharp.Point.Normalize ( )
```

Normalises a [Point](#).

Returns

The normalised [Point](#).

Definition at line 61 of file Point.cs.

6.41.4 Member Data Documentation

6.41.4.1 X

```
double VectSharp.Point.X
```

Horizontal (x) coordinate, measured to the right of the origin.

Definition at line 30 of file Point.cs.

6.41.4.2 Y

```
double VectSharp.Point.Y
```

Vertical (y) coordinate, measured to the bottom of the origin.

Definition at line 35 of file Point.cs.

The documentation for this struct was generated from the following file:

- VectSharp/Point.cs

6.42 VectSharp.ThreeD.PointLightSource Class Reference

Represents a point light source.

Inheritance diagram for VectSharp.ThreeD.PointLightSource:

Public Member Functions

- [PointLightSource](#) (double intensity, Point3D position)
Creates a new [PointLightSource](#) instance.
- [LightIntensity GetLightAt](#) (Point3D point)
Computes the light intensity at the specified point, without taking into account any obstructions.
- double [GetObstruction](#) (Point3D point, IEnumerable< Triangle3DElement > shadowingTriangles)
Determines the amount of obstruction of the light that results at point due to the specified shadowingTriangles .

Properties

- bool [CastsShadow](#) = true [get, set]
- Point3D [Position](#) [get, set]
The position of the light source.
- double [Intensity](#) [get, set]
The base intensity of the light.
- double [DistanceAttenuationExponent](#) = 2 [get, set]
An exponent determining how fast the light attenuates with increasing distance. Set to 0 to disable distance attenuation.

6.42.1 Detailed Description

Represents a point light source.

Definition at line 167 of file Lights.cs.

6.42.2 Constructor & Destructor Documentation

6.42.2.1 PointLightSource()

```
VectSharp.ThreeD.PointLightSource.PointLightSource (
    double intensity,
    Point3D position )
```

Creates a new [PointLightSource](#) instance.

Parameters

<i>intensity</i>	The intensity of the light.
<i>position</i>	The position of the light source.

Definition at line 192 of file Lights.cs.

6.42.3 Property Documentation

6.42.3.1 DistanceAttenuationExponent

```
double VectSharp.ThreeD.PointLightSource.DistanceAttenuationExponent = 2 [get], [set]
```

An exponent determining how fast the light attenuates with increasing distance. Set to 0 to disable distance attenuation.

Definition at line 185 of file Lights.cs.

6.42.3.2 Intensity

```
double VectSharp.ThreeD.PointLightSource.Intensity [get], [set]
```

The base intensity of the light.

Definition at line 180 of file Lights.cs.

6.42.3.3 Position

```
Point3D VectSharp.ThreeD.PointLightSource.Position [get], [set]
```

The position of the light source.

Definition at line 175 of file Lights.cs.

The documentation for this class was generated from the following file:

- VectSharp.ThreeD/Lights.cs

6.43 VectSharp.RadialGradientBrush Class Reference

Represents a brush painting with a radial gradient.

Inheritance diagram for VectSharp.RadialGradientBrush:

Public Member Functions

- **RadialGradientBrush** ([Point](#) focalPoint, [Point](#) centre, double radius, params [GradientStop](#)[] gradientStops)
Creates a new [RadialGradientBrush](#) with the specified focal point, centre, radius and gradient stops.
- **RadialGradientBrush** ([Point](#) focalPoint, [Point](#) centre, double radius, [IEnumerable](#)< [GradientStop](#) > gradientStops)
Creates a new [RadialGradientBrush](#) with the specified focal point, centre, radius and gradient stops.
- override **Brush MultiplyOpacity** (double opacity)
Returns a brush corresponding the current instance, with the specified opacity multiplication applied.

Properties

- **Point FocalPoint** [get]
The focal point of the gradient (i.e. the point within the circle where the gradient starts).
- **Point Centre** [get]
Represents the centre of the gradient.
- double **Radius** [get]
The radius of the gradient.

Additional Inherited Members

6.43.1 Detailed Description

Represents a brush painting with a radial gradient.

Definition at line 350 of file Brush.cs.

6.43.2 Constructor & Destructor Documentation

6.43.2.1 RadialGradientBrush() [1/2]

```
VectSharp.RadialGradientBrush.RadialGradientBrush (
    Point focalPoint,
    Point centre,
    double radius,
    params GradientStop[] gradientStops )
```

Creates a new [RadialGradientBrush](#) with the specified focal point, centre, radius and gradient stops.

Parameters

<i>focalPoint</i>	The focal point of the gradient. Note that this is relative to the current coordinate system when the gradient is used.
<i>centre</i>	The centre of the gradient. Note that this is relative to the current coordinate system when the gradient is used.
<i>radius</i>	The radius of the gradient. Note that this is relative to the current coordinate system when the gradient is used.
<i>gradientStops</i>	The colour stops in the gradient.

Definition at line 374 of file Brush.cs.

6.43.2.2 RadialGradientBrush() [2/2]

```
VectSharp.RadialGradientBrush.RadialGradientBrush (
    Point focalPoint,
    Point centre,
    double radius,
    IEnumerable< GradientStop > gradientStops )
```

Creates a new [RadialGradientBrush](#) with the specified focal point, centre, radius and gradient stops.

Parameters

<i>focalPoint</i>	The focal point of the gradient. Note that this is relative to the current coordinate system when the gradient is used.
<i>centre</i>	The centre of the gradient. Note that this is relative to the current coordinate system when the gradient is used.
<i>radius</i>	The radius of the gradient. Note that this is relative to the current coordinate system when the gradient is used.
<i>gradientStops</i>	The colour stops in the gradient.

Definition at line 413 of file Brush.cs.

6.43.3 Property Documentation

6.43.3.1 Centre

```
Point VectSharp.RadialGradientBrush.Centre [get]
```

Represents the centre of the gradient.

Definition at line 360 of file Brush.cs.

6.43.3.2 FocalPoint

```
Point VectSharp.RadialGradientBrush.FocalPoint [get]
```

The focal point of the gradient (i.e. the point within the circle where the gradient starts).

Definition at line 355 of file Brush.cs.

6.43.3.3 Radius

```
double VectSharp.RadialGradientBrush.Radius [get]
```

The radius of the gradient.

Definition at line 365 of file Brush.cs.

The documentation for this class was generated from the following file:

- VectSharp/Brush.cs

6.44 VectSharp.Raster.Raster Class Reference

Contains methods to render a page to a PNG image.

Static Public Member Functions

- static void [SaveAsPNG](#) (this [Page](#) page, string fileName, double scale=1)
Render the page to a PNG file.
- static void [SaveAsPNG](#) (this [Page](#) page, Stream stream, double scale=1)
Render the page to a PNG stream.

6.44.1 Detailed Description

Contains methods to render a page to a PNG image.

Definition at line 27 of file Raster.cs.

6.44.2 Member Function Documentation

6.44.2.1 SaveAsPNG() [1/2]

```
static void VectSharp.Raster.Raster.SaveAsPNG (
    this Page page,
    Stream stream,
    double scale = 1 ) [static]
```

Render the page to a PNG stream.

Parameters

<i>page</i>	The Page to render.
<i>stream</i>	The stream to which the PNG data will be written.
<i>scale</i>	The scale to be used when rasterising the page. This will determine the width and height of the image file.

Definition at line 59 of file Raster.cs.

6.44.2.2 SaveAsPNG() [2/2]

```
static void VectSharp.Raster.Raster.SaveAsPNG (
    this Page page,
    string fileName,
    double scale = 1 ) [static]
```

Render the page to a PNG file.

Parameters

<i>page</i>	The Page to render.
<i>fileName</i>	The full path to the file to save. If it exists, it will be overwritten.
<i>scale</i>	The scale to be used when rasterising the page. This will determine the width and height of the image file.

Definition at line 36 of file Raster.cs.

The documentation for this class was generated from the following file:

- VectSharp.Raster/Raster.cs

6.45 VectSharp.RasterImage Class Reference

Represents a raster image, created from raw pixel data. Consider using the derived classes included in the NuGet package "VectSharp.MuPDFUtils" if you need to load a raster image from a file or a Stream.

Inheritance diagram for VectSharp.RasterImage:

Public Member Functions

- [RasterImage](#) (IntPtr pixelData, int width, int height, bool hasAlpha, bool interpolate)
Creates a new [RasterImage](#) instance from the specified pixel data in RGB or RGBA format.
- [RasterImage](#) (ref [DisposableIntPtr](#) pixelData, int width, int height, bool hasAlpha, bool interpolate)
Creates a new [RasterImage](#) instance from the specified pixel data in RGB or RGBA format.
- [RasterImage](#) (byte[] data, int width, int height, [PixelFormat](#) pixelFormat, bool interpolate)
Creates a new [RasterImage](#) instance copying the specified pixel data.
- void [ClearPNGCache](#) ()
Disposes the [PNGStream](#). Also useful if it is necessary to regenerate it, e.g. because the underlying image pixel data has changed.
- void [Dispose](#) ()

Properties

- IntPtr [ImageDataAddress](#) [get]
The memory address of the image pixel data.
- IDisposable [DataHolder](#) [get]
An IDisposable that will be disposed when the image is disposed.
- string [Id](#) [get]
A univocal identifier for this image.
- bool [HasAlpha](#) [get]
Determines whether the image has an alpha channel.
- int [Width](#) [get]
The width in pixels of the image.
- int [Height](#) [get]
The height in pixels of the image.
- bool [Interpolate](#) [get]
Determines whether the image should be interpolated when it is resized.
- MemoryStream [PNGStream](#) [get]
Contains a representation of the image in PNG format. Generated at the first access and cached until the image is disposed.

6.45.1 Detailed Description

Represents a raster image, created from raw pixel data. Consider using the derived classes included in the NuGet package "VectSharp.MuPDFUtils" if you need to load a raster image from a file or a Stream.

Definition at line 98 of file RasterImage.cs.

6.45.2 Constructor & Destructor Documentation

6.45.2.1 RasterImage() [1/3]

```
VectSharp.RasterImage.RasterImage (
    IntPtr pixelData,
    int width,
    int height,
    bool hasAlpha,
    bool interpolate )
```

Creates a new [RasterImage](#) instance from the specified pixel data in RGB or RGBA format.

Parameters

<i>pixelData</i>	The address of the image pixel data in RGB or RGBA format.
<i>width</i>	The width in pixels of the image.
<i>height</i>	The height in pixels of the image.
<i>hasAlpha</i>	true if the image is in RGBA format, false if it is in RGB format.
<i>interpolate</i>	Whether the image should be interpolated when it is resized.

Definition at line 170 of file RasterImage.cs.

6.45.2.2 RasterImage() [2/3]

```
VectSharp.RasterImage.RasterImage (
    ref DisposableIntPtr pixelData,
    int width,
    int height,
    bool hasAlpha,
    bool interpolate )
```

Creates a new [RasterImage](#) instance from the specified pixel data in RGB or RGBA format.

Parameters

<i>pixelData</i>	The address of the image pixel data in RGB or RGBA format wrapped in a DisposableIntPtr . The RasterImage will take ownership of this memory.
<i>width</i>	The width in pixels of the image.
<i>height</i>	The height in pixels of the image.
<i>hasAlpha</i>	true if the image is in RGBA format, false if it is in RGB format.
<i>interpolate</i>	Whether the image should be interpolated when it is resized.

Definition at line 188 of file RasterImage.cs.

6.45.2.3 RasterImage() [3/3]

```
VectSharp.RasterImage.RasterImage (
    byte[] data,
    int width,
    int height,
    PixelFormats pixelFormat,
    bool interpolate )
```

Creates a new [RasterImage](#) instance copying the specified pixel data.

Parameters

<i>data</i>	The image pixel data that will be copied.
-------------	---

Parameters

<i>width</i>	The width in pixels of the image.
<i>height</i>	The height in pixels of the image.
<i>pixelFormat</i>	The format of the pixel data.
<i>interpolate</i>	Whether the image should be interpolated when it is resized.

Definition at line 207 of file RasterImage.cs.

6.45.3 Member Function Documentation

6.45.3.1 ClearPNGCache()

```
void VectSharp.RasterImage.ClearPNGCache ( )
```

Disposes the [PNGStream](#). Also useful if it is necessary to regenerate it, e.g. because the underlying image pixel data has changed.

Definition at line 261 of file RasterImage.cs.

6.45.4 Property Documentation

6.45.4.1 DataHolder

```
IDisposable VectSharp.RasterImage.DataHolder [get]
```

An IDisposable that will be disposed when the image is disposed.

Definition at line 108 of file RasterImage.cs.

6.45.4.2 HasAlpha

```
bool VectSharp.RasterImage.HasAlpha [get]
```

Determines whether the image has an alpha channel.

Definition at line 118 of file RasterImage.cs.

6.45.4.3 Height

```
int VectSharp.RasterImage.Height [get]
```

The height in pixels of the image.

Definition at line 128 of file RasterImage.cs.

6.45.4.4 Id

```
string VectSharp.RasterImage.Id [get]
```

A univocal identifier for this image.

Definition at line 113 of file RasterImage.cs.

6.45.4.5 ImageDataAddress

```
IntPtr VectSharp.RasterImage.ImageDataAddress [get]
```

The memory address of the image pixel data.

Definition at line 103 of file RasterImage.cs.

6.45.4.6 Interpolate

```
bool VectSharp.RasterImage.Interpolate [get]
```

Determines whether the image should be interpolated when it is resized.

Definition at line 133 of file RasterImage.cs.

6.45.4.7 PNGStream

```
MemoryStream VectSharp.RasterImage.PNGStream [get]
```

Contains a representation of the image in PNG format. Generated at the first access and cached until the image is disposed.

Definition at line 140 of file RasterImage.cs.

6.45.4.8 Width

```
int VectSharp.RasterImage.Width [get]
```

The width in pixels of the image.

Definition at line 123 of file RasterImage.cs.

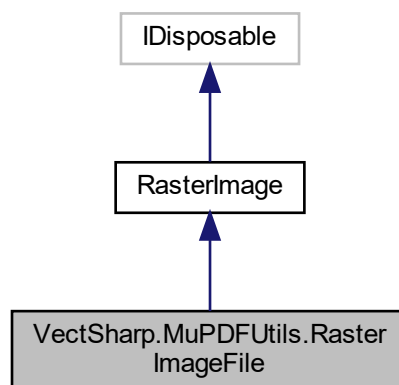

The documentation for this class was generated from the following file:

- VectSharp/RasterImage.cs

6.46 VectSharp.MuPDFUtils.RasterImageFile Class Reference

A [RasterImage](#) created from a file.

Inheritance diagram for VectSharp.MuPDFUtils.RasterImageFile:

Public Member Functions

- [RasterImageFile](#) (string fileName, int pageNumber=0, double scale=1, bool alpha=true, bool interpolate=true)
Creates a new [RasterImage](#) from the specified file.

Additional Inherited Members

6.46.1 Detailed Description

A [RasterImage](#) created from a file.

Definition at line 28 of file RasterImages.cs.

6.46.2 Constructor & Destructor Documentation

6.46.2.1 RasterImageFile()

```
VectSharp.MuPDFUtils.RasterImageFile.RasterImageFile (
    string fileName,
    int pageNumber = 0,
    double scale = 1,
    bool alpha = true,
    bool interpolate = true )
```

Creates a new [RasterImage](#) from the specified file.

Parameters

<i>fileName</i>	The path to the file containing the image.
<i>pageNumber</i>	The number of the page in the file from which the image should be created, starting at 0. Only useful for multi-page formats, such as PDF .
<i>scale</i>	The scale factor at which to render the image.
<i>alpha</i>	A boolean value indicating whether transparency (alpha) data from the image should be preserved or not.
<i>interpolate</i>	A boolean value indicating whether the image should be interpolated when it is resized or not.

Definition at line 38 of file RasterImages.cs.

The documentation for this class was generated from the following file:

- VectSharp.MuPDFUtils/RasterImages.cs

6.47 VectSharp.MuPDFUtils.RasterImageStream Class Reference

A [RasterImage](#) created from a stream.

Inheritance diagram for VectSharp.MuPDFUtils.RasterImageStream:

Public Member Functions

- [RasterImageStream](#) (Stream imageStream, InputFileTypes fileType, int pageNumber=0, double scale=1, bool alpha=true, bool interpolate=true)
Creates a new [RasterImage](#) from the specified stream.
- [RasterImageStream](#) (IntPtr imageAddress, long imageLength, InputFileTypes fileType, int pageNumber=0, double scale=1, bool alpha=true, bool interpolate=true)
Creates a new [RasterImage](#) from the specified stream.

Additional Inherited Members

6.47.1 Detailed Description

A [RasterImage](#) created from a stream.

Definition at line 69 of file RasterImages.cs.

6.47.2 Constructor & Destructor Documentation

6.47.2.1 RasterImageStream() [1/2]

```

VectSharp.MuPDFUtils.RasterImageStream.RasterImageStream (
    Stream imageStream,
    InputFileTypes fileType,
    int pageNumber = 0,
    double scale = 1,
    bool alpha = true,
    bool interpolate = true )
  
```

Creates a new [RasterImage](#) from the specified stream.

Parameters

<i>imageStream</i>	The stream containing the image data.
<i>fileType</i>	The type of the image contained in the stream.
<i>pageNumber</i>	The number of the page in the file from which the image should be created, starting at 0. Only useful for multi-page formats, such as PDF .
<i>scale</i>	The scale factor at which to render the image.
<i>alpha</i>	A boolean value indicating whether transparency (alpha) data from the image should be preserved or not.
<i>interpolate</i>	A boolean value indicating whether the image should be interpolated when it is resized or not.

Definition at line 80 of file RasterImages.cs.

6.47.2.2 RasterImageStream() [2/2]

```
VectSharp.MuPDFUtils.RasterImageStream.RasterImageStream (
    IntPtr imageAddress,
    long imageLength,
    InputFileTypes fileType,
    int pageNumber = 0,
    double scale = 1,
    bool alpha = true,
    bool interpolate = true )
```

Creates a new [RasterImage](#) from the specified stream.

Parameters

<i>imageAddress</i>	A pointer to the address where the image data is contained.
<i>imageLength</i>	The length in bytes of the image data.
<i>fileType</i>	The type of the image contained in the stream.
<i>pageNumber</i>	The number of the page in the file from which the image should be created, starting at 0. Only useful for multi-page formats, such as PDF .
<i>scale</i>	The scale factor at which to render the image.
<i>alpha</i>	A boolean value indicating whether transparency (alpha) data from the image should be preserved or not.
<i>interpolate</i>	A boolean value indicating whether the image should be interpolated when it is resized or not.

Definition at line 148 of file RasterImages.cs.

The documentation for this class was generated from the following file:

- VectSharp.MuPDFUtils/RasterImages.cs

6.48 VectSharp.Canvas.RenderAction Class Reference

Represents a light-weight rendering action.

Public Types

- enum [ActionTypes](#) { [ActionTypes.Path](#), [ActionTypes.Text](#), [ActionTypes.RasterImage](#) }
Types of rendering actions.

Public Member Functions

- void [BringToFront](#) ()
Brings the render action to the front of the rendering queue. This method can only be invoked after the output has been fully initialised.
- void [SendToBack](#) ()
Brings the render action to the back of the rendering queue. This method can only be invoked after the output has been fully initialised.

Static Public Member Functions

- static [RenderAction PathAction](#) ([Geometry](#) geometry, Pen stroke, IBrush fill, Avalonia.Matrix transform, [Geometry](#) clippingPath, string tag=null)
Creates a new [RenderAction](#) representing a path.
- static [RenderAction TextAction](#) (Avalonia.Media.FormattedText text, IBrush fill, Avalonia.Matrix transform, [Geometry](#) clippingPath, string tag=null)
Creates a new [RenderAction](#) representing text.
- static [RenderAction ImageAction](#) (string imageId, Avalonia.Rect sourceRect, Avalonia.Rect destinationRect, Avalonia.Matrix transform, [Geometry](#) clippingPath, string tag=null)
Creates a new [RenderAction](#) representing an image.

Properties

- [ActionTypes ActionType](#) [get]
Type of the rendering action.
- [Geometry Geometry](#) [get, set]
Geometry that needs to be rendered (null if the action type is [ActionTypes.Text](#)). If you change this, you need to invalidate the [Parent](#)'s visual.
- [Avalonia.Media.FormattedText Text](#) [get, set]
Text that needs to be rendered (null if the action type is [ActionTypes.Path](#)). If you change this, you need to invalidate the [Parent](#)'s visual.
- Pen [Stroke](#) [get, set]
Rendering stroke (null if the action type is [ActionTypes.Text](#) or if the rendered action only has a [Fill](#)). If you change this, you need to invalidate the [Parent](#)'s visual.
- IBrush [Fill](#) [get, set]
Rendering fill (null if the rendered action only has a [Stroke](#)). If you change this, you need to invalidate the [Parent](#)'s visual.
- string [ImageId](#) [get, set]
Univocal identifier of the image that needs to be drawn.
- [Avalonia.Rect ImageSource](#) [get, set]
The source rectangle of the image.
- [Avalonia.Rect ImageDestination](#) [get, set]
The destination rectangle of the image.
- [Geometry ClippingPath](#) [get, set]
The current clipping path.

- Avalonia.Matrix [InverseTransform](#) = Avalonia.Matrix.Identity [get]
Inverse transformation matrix.
- Avalonia.Matrix [Transform](#) [get, set]
Rendering transformation matrix. If you change this, you need to invalidate the [Parent](#)'s visual.
- string [Tag](#) [get, set]
A tag to access the [RenderAction](#).
- Avalonia.Controls.Canvas [Parent](#) [get]
The container of this [RenderAction](#).

Events

- EventHandler< Avalonia.Input.PointerEventArgs > [PointerEnter](#)
Raised when the pointer enters the area covered by the [RenderAction](#).
- EventHandler< Avalonia.Input.PointerEventArgs > [PointerLeave](#)
Raised when the pointer leaves the area covered by the [RenderAction](#).
- EventHandler< Avalonia.Input.PointerPressedEventArgs > [PointerPressed](#)
Raised when the pointer is pressed while over the area covered by the [RenderAction](#).
- EventHandler< Avalonia.Input.PointerReleasedEventArgs > [PointerReleased](#)
Raised when the pointer is released after a [PointerPressed](#) event.

6.48.1 Detailed Description

Represents a light-weight rendering action.

Definition at line 1204 of file AvaloniaContext.cs.

6.48.2 Member Enumeration Documentation

6.48.2.1 ActionTypes

enum [VectSharp.Canvas.RenderAction.ActionTypes](#) [strong]

Types of rendering actions.

Enumerator

Path	The render action represents a path object.
Text	The render action represents a text object.
RasterImage	The render action represents a raster image.

Definition at line 1209 of file AvaloniaContext.cs.

6.48.3 Member Function Documentation

6.48.3.1 BringToFront()

```
void VectSharp.Canvas.RenderAction.BringToFront ( )
```

Brings the render action to the front of the rendering queue. This method can only be invoked after the output has been fully initialised.

Definition at line 1430 of file AvaloniaContext.cs.

6.48.3.2 ImageAction()

```
static RenderAction VectSharp.Canvas.RenderAction.ImageAction (
    string imageId,
    Avalonia.Rect sourceRect,
    Avalonia.Rect destinationRect,
    Avalonia.Matrix transform,
    Geometry clippingPath,
    string tag = null ) [static]
```

Creates a new [RenderAction](#) representing an image.

Parameters

<i>imageId</i>	The univocal identifier of the image to draw.
<i>sourceRect</i>	The source rectangle of the image.
<i>destinationRect</i>	The destination rectangle of the image.
<i>transform</i>	The transform that will be applied to the image.
<i>clippingPath</i>	The clipping path.
<i>tag</i>	A tag to access the RenderAction . If this is null this RenderAction is not visible in the hit test.

Returns

A new [RenderAction](#) representing an image.

Definition at line 1413 of file AvaloniaContext.cs.

6.48.3.3 PathAction()

```
static RenderAction VectSharp.Canvas.RenderAction.PathAction (
    Geometry geometry,
    Pen stroke,
```

```

        IBrush fill,
        Avalonia.Matrix transform,
        Geometry clippingPath,
        string tag = null ) [static]

```

Creates a new [RenderAction](#) representing a path.

Parameters

<i>geometry</i>	The geometry to be rendered.
<i>stroke</i>	The stroke of the path (can be null).
<i>fill</i>	The fill of the path (can be null).
<i>transform</i>	The transform that will be applied to the path.
<i>clippingPath</i>	The clipping path.
<i>tag</i>	A tag to access the RenderAction . If this is null this RenderAction is not visible in the hit test.

Returns

A new [RenderAction](#) representing a path.

Definition at line 1366 of file AvaloniaContext.cs.

6.48.3.4 SendToBack()

```
void VectSharp.Canvas.RenderAction.SendToBack ( )
```

Brings the render action to the back of the rendering queue. This method can only be invoked after the output has been fully initialised.

Definition at line 1438 of file AvaloniaContext.cs.

6.48.3.5 TextAction()

```

static RenderAction VectSharp.Canvas.RenderAction.TextAction (
    Avalonia.Media.FormattedText text,
    IBrush fill,
    Avalonia.Matrix transform,
    Geometry clippingPath,
    string tag = null ) [static]

```

Creates a new [RenderAction](#) representing text.

Parameters

<i>text</i>	The text to be rendered.
<i>fill</i>	The fill of the text (can be null).
<i>transform</i>	The transform that will be applied to the text.
<i>clippingPath</i>	The clipping path.
<i>tag</i>	A tag to access the RenderAction . If this is null this RenderAction is not visible in the hit test.

Returns

A new [RenderAction](#) representing text.

Definition at line 1389 of file AvaloniaContext.cs.

6.48.4 Property Documentation

6.48.4.1 ActionType

[ActionTypes](#) VectSharp.Canvas.RenderAction.ActionType [get]

Type of the rendering action.

Definition at line 1230 of file AvaloniaContext.cs.

6.48.4.2 ClippingPath

[Geometry](#) VectSharp.Canvas.RenderAction.ClippingPath [get], [set]

The current clipping path.

Definition at line 1270 of file AvaloniaContext.cs.

6.48.4.3 Fill

[IBrush](#) VectSharp.Canvas.RenderAction.Fill [get], [set]

Rendering fill (null if the rendered action only has a [Stroke](#)). If you change this, you need to invalidate the [Parent's](#) visual.

Definition at line 1250 of file AvaloniaContext.cs.

6.48.4.4 Geometry

[Geometry](#) VectSharp.Canvas.RenderAction.Geometry [get], [set]

Geometry that needs to be rendered (null if the action type is [ActionTypes.Text](#)). If you change this, you need to invalidate the [Parent's](#) visual.

Definition at line 1235 of file AvaloniaContext.cs.

6.48.4.5 ImageDestination

```
Avalonia.? Rect VectSharp.Canvas.RenderAction.ImageDestination [get], [set]
```

The destination rectangle of the image.

Definition at line 1265 of file AvaloniaContext.cs.

6.48.4.6 ImageId

```
string VectSharp.Canvas.RenderAction.ImageId [get], [set]
```

Univocal identifier of the image that needs to be drawn.

Definition at line 1255 of file AvaloniaContext.cs.

6.48.4.7 ImageSource

```
Avalonia.? Rect VectSharp.Canvas.RenderAction.ImageSource [get], [set]
```

The source rectangle of the image.

Definition at line 1260 of file AvaloniaContext.cs.

6.48.4.8 InverseTransform

```
Avalonia.Matrix VectSharp.Canvas.RenderAction.InverseTransform = Avalonia.Matrix.Identity  
[get]
```

Inverse transformation matrix.

Definition at line 1277 of file AvaloniaContext.cs.

6.48.4.9 Parent

```
Avalonia.Controls.Canvas VectSharp.Canvas.RenderAction.Parent [get]
```

The container of this [RenderAction](#).

Definition at line 1302 of file AvaloniaContext.cs.

6.48.4.10 Stroke

```
Pen VectSharp.Canvas.RenderAction.Stroke [get], [set]
```

Rendering stroke (null if the action type is [ActionTypes.Text](#) or if the rendered action only has a [Fill](#)). If you change this, you need to invalidate the [Parent](#)'s visual.

Definition at line 1245 of file AvaloniaContext.cs.

6.48.4.11 Tag

```
string VectSharp.Canvas.RenderAction.Tag [get], [set]
```

A tag to access the [RenderAction](#).

Definition at line 1295 of file AvaloniaContext.cs.

6.48.4.12 Text

```
Avalonia.Media.FormattedText VectSharp.Canvas.RenderAction.Text [get], [set]
```

Text that needs to be rendered (null if the action type is [ActionTypes.Path](#)). If you change this, you need to invalidate the [Parent](#)'s visual.

Definition at line 1240 of file AvaloniaContext.cs.

6.48.4.13 Transform

```
Avalonia.Matrix VectSharp.Canvas.RenderAction.Transform [get], [set]
```

Rendering transformation matrix. If you change this, you need to invalidate the [Parent](#)'s visual.

Definition at line 1282 of file AvaloniaContext.cs.

6.48.5 Event Documentation

6.48.5.1 PointerEnter

```
EventHandler<Avalonia.Input.PointerEventArgs> VectSharp.Canvas.RenderAction.PointerEnter
```

Raised when the pointer enters the area covered by the [RenderAction](#).

Definition at line 1313 of file AvaloniaContext.cs.

6.48.5.2 PointerLeave

```
EventHandler<Avalonia.Input.PointerEventArgs> VectSharp.Canvas.RenderAction.PointerLeave
```

Raised when the pointer leaves the area covered by the [RenderAction](#).

Definition at line 1318 of file AvaloniaContext.cs.

6.48.5.3 PointerPressed

```
EventHandler<Avalonia.Input.PointerPressedEventArgs> VectSharp.Canvas.RenderAction.Pointer←  
Pressed
```

Raised when the pointer is pressed while over the area covered by the [RenderAction](#).

Definition at line 1323 of file AvaloniaContext.cs.

6.48.5.4 PointerReleased

```
EventHandler<Avalonia.Input.PointerReleasedEventArgs> VectSharp.Canvas.RenderAction.Pointer←  
Released
```

Raised when the pointer is released after a [PointerPressed](#) event.

Definition at line 1328 of file AvaloniaContext.cs.

The documentation for this class was generated from the following file:

- VectSharp.Canvas/AvaloniaContext.cs

6.49 VectSharp.Canvas.ResourceFontFamily Class Reference

Represents a [FontFamily](#) created from a resource stream.

Inheritance diagram for VectSharp.Canvas.ResourceFontFamily:

Public Member Functions

- [ResourceFontFamily](#) (System.IO.Stream resourceStream, string resourceName)

Create a new [ResourceFontFamily](#) from the specified *resourceStream* containing a TTF file, passing the specified *resourceName* to the *Avalonia.Media.FontFamily.Parse(string, Uri)* method.

Additional Inherited Members

6.49.1 Detailed Description

Represents a [FontFamily](#) created from a resource stream.

Definition at line 32 of file AvaloniaContext.cs.

6.49.2 Constructor & Destructor Documentation

6.49.2.1 ResourceFontFamily()

```
VectSharp.Canvas.ResourceFontFamily.ResourceFontFamily (
    System.IO.Stream resourceStream,
    string resourceName )
```

Create a new [ResourceFontFamily](#) from the specified *resourceStream* containing a TTF file, passing the specified *resourceName* to the *Avalonia.Media.FontFamily.Parse(string, Uri)* method.

Parameters

<i>resourceStream</i>	A resource stream containing a TTF file.
<i>resourceName</i>	The name of the embedded resource, which will be parsed using <i>Avalonia.Media.FontFamily.Parse(string, Uri)</i> .

Definition at line 41 of file AvaloniaContext.cs.

The documentation for this class was generated from the following file:

- VectSharp.Canvas/AvaloniaContext.cs

6.50 VectSharp.ThreeD.Scene Class Reference

Represents a 3D scene.

Inheritance diagram for VectSharp.ThreeD.Scene:

Public Member Functions

- [Scene](#) ()
Creates a new [Scene](#).
- void [AddElement](#) (Element3D element)
Adds the specified element to the scene.
- void [AddRange](#) (IEnumerable< Element3D > elements)
Adds the specified elements to the scene.
- void [Replace](#) (Func< Element3D, Element3D > replacementFunction)
Replaces each element in the scene with the element returned by the replacementFunction .
- void [Replace](#) (Func< Element3D, IEnumerable< Element3D >> replacementFunction)
Replaces each element in the scene with the element(s) returned by the replacementFunction .

Public Attributes

- IEnumerable< Element3D > [SceneElements](#) => sceneElements

Properties

- object [SceneLock](#) [get]

6.50.1 Detailed Description

Represents a 3D scene.

Definition at line 49 of file Scene.cs.

6.50.2 Constructor & Destructor Documentation

6.50.2.1 Scene()

`VectSharp.ThreeD.Scene.Scene ()`

Creates a new [Scene](#).

Definition at line 62 of file Scene.cs.

The documentation for this class was generated from the following file:

- VectSharp.ThreeD/Scene.cs

6.51 VectSharp.Segment Class Reference

Represents a segment as part of a [GraphicsPath](#).

Public Member Functions

- abstract [Segment Clone](#) ()
Creates a copy of the [Segment](#).
- abstract double [Measure](#) ([Point](#) previousPoint)
Computes the length of the [Segment](#).
- abstract [Point GetPointAt](#) ([Point](#) previousPoint, double position)
Gets the point on the [Segment](#) at the specified (relative) position .
- abstract [Point GetTangentAt](#) ([Point](#) previousPoint, double position)
Gets the tangent to the [Segment](#) at the specified (relative) position .
- abstract [IEnumerable< Segment > Linearise](#) ([Point?](#) previousPoint, double resolution)
Transform the segment into a series of linear segments. Segments that are already linear are not changed.
- abstract [IEnumerable< Point > GetLinearisationTangents](#) ([Point?](#) previousPoint, double resolution)
Gets the tangent at the points at which the segment would be linearised.
- abstract [IEnumerable< Segment > Transform](#) (Func< [Point](#), [Point](#) > transformationFunction)
Applies an arbitrary transformation to all of the points of the [Segment](#).

Properties

- abstract [SegmentType Type](#) [get]
The type of the [Segment](#).
- [Point\[\] Points](#) [get]
The points used to define the [Segment](#).
- virtual [Point Point](#) [get]
The end point of the [Segment](#).

6.51.1 Detailed Description

Represents a segment as part of a [GraphicsPath](#).

Definition at line 28 of file Segment.cs.

6.51.2 Member Function Documentation

6.51.2.1 Clone()

```
abstract Segment VectSharp.Segment.Clone ( ) [pure virtual]
```

Creates a copy of the [Segment](#).

Returns

A copy of the [Segment](#).

6.51.2.2 GetLinearisationTangents()

```
abstract IEnumerable<Point> VectSharp.Segment.GetLinearisationTangents (
    Point? previousPoint,
    double resolution ) [pure virtual]
```

Gets the tangent at the points at which the segment would be linearised.

Parameters

<i>previousPoint</i>	The point from which the Segment starts (i.e. the endpoint of the previous Segment).
<i>resolution</i>	The absolute length between successive samples in curve segments.

Returns

A collection of tangents at the points in which the segment would be linearised.

6.51.2.3 GetPointAt()

```
abstract Point VectSharp.Segment.GetPointAt (
    Point previousPoint,
    double position ) [pure virtual]
```

Gets the point on the [Segment](#) at the specified (relative) *position*).

Parameters

<i>previousPoint</i>	The point from which the Segment starts (i.e. the endpoint of the previous Segment).
<i>position</i>	The relative position on the Segment (0 is the start of the Segment , 1 is the end of the Segment).

Returns

The point at the specified position.

6.51.2.4 GetTangentAt()

```
abstract Point VectSharp.Segment.GetTangentAt (
    Point previousPoint,
    double position ) [pure virtual]
```

Gets the tangent to the [Segment](#) at the specified (relative) *position* .

Parameters

<i>previousPoint</i>	The point from which the Segment starts (i.e. the endpoint of the previous Segment).
<i>position</i>	The relative position on the Segment (0 is the start of the Segment , 1 is the end of the Segment).

Returns

The tangent to the point at the specified position.

6.51.2.5 Linearise()

```
abstract IEnumerable<Segment> VectSharp.Segment.Linearise (
    Point? previousPoint,
    double resolution ) [pure virtual]
```

Transform the segment into a series of linear segments. Segments that are already linear are not changed.

Parameters

<i>previousPoint</i>	The point from which the Segment starts (i.e. the endpoint of the previous Segment).
<i>resolution</i>	The absolute length between successive samples in curve segments.

Returns

A collection of linear segments that approximate the current segment.

6.51.2.6 Measure()

```
abstract double VectSharp.Segment.Measure (
    Point previousPoint ) [pure virtual]
```

Computes the length of the [Segment](#).

Parameters

<i>previousPoint</i>	The point from which the Segment starts (i.e. the endpoint of the previous Segment).
----------------------	---

Returns

The length of the segment.

6.51.2.7 Transform()

```
abstract IEnumerable<Segment> VectSharp.Segment.Transform (
    Func< Point, Point > transformationFunction ) [pure virtual]
```

Applies an arbitrary transformation to all of the points of the [Segment](#).

Parameters

<i>transformationFunction</i>	An arbitrary transformation function.
-------------------------------	---------------------------------------

Returns

A collection of [Segments](#) that have been transformed according to the *transformationFunction* .

6.51.3 Property Documentation**6.51.3.1 Point**

```
virtual Point VectSharp.Segment.Point [get]
```

The end point of the [Segment](#).

Definition at line 44 of file Segment.cs.

6.51.3.2 Points

```
Point [ ] VectSharp.Segment.Points [get]
```

The points used to define the [Segment](#).

Definition at line 39 of file Segment.cs.

6.51.3.3 Type

```
abstract SegmentType VectSharp.Segment.Type [get]
```

The type of the [Segment](#).

Definition at line 34 of file Segment.cs.

The documentation for this class was generated from the following file:

- VectSharp/Segment.cs

6.52 VectSharp.Size Struct Reference

Represents the size of an object.

Public Member Functions

- [Size](#) (double width, double height)
Create a new [Size](#).

Public Attributes

- double [Width](#)
Width of the object.
- double [Height](#)
Height of the object.

6.52.1 Detailed Description

Represents the size of an object.

Definition at line 82 of file Point.cs.

6.52.2 Constructor & Destructor Documentation

6.52.2.1 Size()

```
VectSharp.Size.Size (  
    double width,  
    double height )
```

Create a new [Size](#).

Parameters

<i>width</i>	The width of the object.
<i>height</i>	The height of the object.

Definition at line 99 of file Point.cs.

6.52.3 Member Data Documentation

6.52.3.1 Height

```
double VectSharp.Size.Height
```

Height of the object.

Definition at line 92 of file Point.cs.

6.52.3.2 Width

```
double VectSharp.Size.Width
```

Width of the object.

Definition at line 87 of file Point.cs.

The documentation for this struct was generated from the following file:

- VectSharp/Point.cs

6.53 VectSharp.Canvas.SKMultiLayerRenderCanvas Class Reference

Represents a multi-threaded, triple-buffered canvas on which the image is drawn using SkiaSharp.

Inheritance diagram for VectSharp.Canvas.SKMultiLayerRenderCanvas:

Public Member Functions

- [SKMultiLayerRenderCanvas](#) ([Document](#) document, [Colour](#) backgroundColour, double width, double height, List< [SKRenderAction](#) > layerTransforms=null)
Create a new [SKMultiLayerRenderCanvas](#) from a [Document](#), where each page represents a layer.
- [SKMultiLayerRenderCanvas](#) (IEnumerable< [Page](#) > layers, [Colour](#) backgroundColour, double width, double height, List< [SKRenderAction](#) > layerTransforms=null)
Create a new [SKMultiLayerRenderCanvas](#) from a collection of [Pages](#), each representing a layer.
- [SKMultiLayerRenderCanvas](#) (List< [SKRenderContext](#) > contents, List< [SKRenderAction](#) > contentTransforms, [Colour](#) backgroundColour, double width, double height)
Create a new [SKMultiLayerRenderCanvas](#) from a list of [SKRenderContexts](#), each representing a layer.
- void [UpdateWith](#) (List< [SKRenderContext](#) > contents, List< [SKRenderAction](#) > contentTransforms, [Colour](#) backgroundColour, double width, double height)
Replace the contents of the [SKMultiLayerRenderCanvas](#) with the specified layers.
- void [UpdateLayer](#) (int layer, [SKRenderContext](#) newContent, [SKRenderAction](#) newTransform)
Replace a single layer with the specified content.
- void [AddLayer](#) ([SKRenderContext](#) newContent, [SKRenderAction](#) newTransform)
Add a new layer to the image.
- void [InsertLayer](#) (int index, [SKRenderContext](#) newContent, [SKRenderAction](#) newTransform)
Insert a new layer at the specified index.
- void [RemoveLayer](#) (int layer)
Remove the specified layer from the image.
- void [SwitchLayers](#) (int layer1, int layer2)
Switch the position of the two specified layers.
- void [MoveLayer](#) (int oldIndex, int newIndex)
Move the specified layer to the specified position, shifting all other layers as necessary.
- [RenderTargetBitmap](#) [RenderAtResolution](#) (int width, int height, [SKColor?](#) background=null)
Render the image at to a bitmap at the specified resolution.
- void [InvalidateDirty](#) ()
Invalidate the contents of the canvas, forcing it to redraw itself.
- void [InvalidateZIndex](#) ()
Invalidate the contents of the canvas, specifying that the order of the layers has changed.
- override void [Render](#) ([DrawingContext](#) context)
- void [Dispose](#) ()

Public Attributes

- List< List< [SKRenderAction](#) > > [RenderActions](#)
The list of render actions, each element in this list is itself a list, containing the actions that correspond to a layer in the image.
- List< [SKRenderAction](#) > [LayerTransforms](#)
The list of transforms associated with each layer.
- object [RenderLock](#) = new object()
An lock for the rendering loop. The public methods of this class already lock on this, but you may need it if you want to directly manipulate the contents of the canvas.

Properties

- double [PageWidth](#) [get, set]
The width of the page that is rendered on this canvas.
- double [PageHeight](#) [get, set]
The height of the page that is rendered on this canvas.
- Func< long, Bitmap > [Spinner](#) = null [get, set]
If the image to draw is not already cached, this method is called with an argument containing the number of milliseconds since the image was last rendered. The method can return a Bitmap that will be drawn on the canvas in order to let users know that the image is being rendered in background.

6.53.1 Detailed Description

Represents a multi-threaded, triple-buffered canvas on which the image is drawn using SkiaSharp.

Definition at line 43 of file SKMultiLayerRenderCanvas.cs.

6.53.2 Constructor & Destructor Documentation

6.53.2.1 SKMultiLayerRenderCanvas() [1/3]

```
VectSharp.Canvas.SKMultiLayerRenderCanvas.SKMultiLayerRenderCanvas (
    Document document,
    Colour backgroundColour,
    double width,
    double height,
    List< SKRenderAction > layerTransforms = null )
```

Create a new [SKMultiLayerRenderCanvas](#) from a [Document](#), where each page represents a layer.

Parameters

<i>document</i>	The document containing the layers as Pages .
<i>layerTransforms</i>	A list of transforms associated with each layer. This list should contain the same number of elements as the number of pages in <i>document</i> . This is useful to manipulate the position of each layer individually. If this is null, an identity transform is applied to each layer.
<i>backgroundColour</i>	The background colour of the canvas.
<i>width</i>	The width of the canvas and the pages it contains.
<i>height</i>	The height of the canvas and the pages it contains.

Definition at line 98 of file SKMultiLayerRenderCanvas.cs.

6.53.2.2 SKMultiLayerRenderCanvas() [2/3]

```
VectSharp.Canvas.SKMultiLayerRenderCanvas.SKMultiLayerRenderCanvas (
    IEnumerable< Page > layers,
    Colour backgroundColour,
    double width,
    double height,
    List< SKRenderAction > layerTransforms = null )
```

Create a new [SKMultiLayerRenderCanvas](#) from a collection of [Pages](#), each representing a layer.

Parameters

<i>layers</i>	The contents of the canvas. Each element in this list represents a layer.
<i>layerTransforms</i>	A list of transforms associated with each layer. This list should contain the same number of elements as <i>layers</i> . This is useful to manipulate the position of each layer individually. If this is null, an identity transform is applied to each layer.
<i>backgroundColour</i>	The background colour of the canvas.
<i>width</i>	The width of the canvas and the pages it contains.
<i>height</i>	The height of the canvas and the pages it contains.

Definition at line 108 of file SKMultiLayerRenderCanvas.cs.

6.53.2.3 SKMultiLayerRenderCanvas() [3/3]

```
VectSharp.Canvas.SKMultiLayerRenderCanvas.SKMultiLayerRenderCanvas (
    List< SKRenderContext > contents,
    List< SKRenderAction > contentTransforms,
    Colour backgroundColour,
    double width,
    double height )
```

Create a new [SKMultiLayerRenderCanvas](#) from a list of [SKRenderContexts](#), each representing a layer.

Parameters

<i>contents</i>	The contents of the canvas. Each element in this list represents a layer. A Page can be converted to a SKRenderContext through the CopyToSKRenderContext method.
<i>contentTransforms</i>	A list of transforms associated with each layer. This list should contain the same number of elements as <i>contents</i> . This is useful to manipulate the position of each layer individually.
<i>backgroundColour</i>	The background colour of the canvas.
<i>width</i>	The width of the canvas and the page it contains.
<i>height</i>	The height of the canvas and the page it contains.

Definition at line 143 of file SKMultiLayerRenderCanvas.cs.

6.53.3 Member Function Documentation

6.53.3.1 AddLayer()

```
void VectSharp.Canvas.SKMultiLayerRenderCanvas.AddLayer (
    SKRenderContext newContent,
    SKRenderAction newTransform )
```

Add a new layer to the image.

Parameters

<i>newContent</i>	The contents of the new layer. A Page can be converted to a SKRenderContext through the CopyToSKRenderContext method.
<i>newTransform</i>	The transform for the new layer.

Definition at line 276 of file SKMultiLayerRenderCanvas.cs.

6.53.3.2 InsertLayer()

```
void VectSharp.Canvas.SKMultiLayerRenderCanvas.InsertLayer (
    int index,
    SKRenderContext newContent,
    SKRenderAction newTransform )
```

Insert a new layer at the specified index.

Parameters

<i>index</i>	The position at which the new layer will be inserted.
<i>newContent</i>	The contents of the new layer.
<i>newTransform</i>	The transform for the new layer.

Definition at line 309 of file SKMultiLayerRenderCanvas.cs.

6.53.3.3 InvalidateDirty()

```
void VectSharp.Canvas.SKMultiLayerRenderCanvas.InvalidateDirty ( )
```

Invalidate the contents of the canvas, forcing it to redraw itself.

Definition at line 992 of file SKMultiLayerRenderCanvas.cs.

6.53.3.4 InvalidateZIndex()

```
void VectSharp.Canvas.SKMultiLayerRenderCanvas.InvalidateZIndex ( )
```

Invalidate the contents of the canvas, specifying that the order of the layers has changed.

Definition at line 1001 of file SKMultiLayerRenderCanvas.cs.

6.53.3.5 MoveLayer()

```
void VectSharp.Canvas.SKMultiLayerRenderCanvas.MoveLayer (
    int oldIndex,
    int newIndex )
```

Move the specified layer to the specified position, shifting all other layers as necessary.

Parameters

<i>oldIndex</i>	The current index of the layer to move.
<i>newIndex</i>	The final index of the layer. Layers after this will be shifted by 1 in order to accommodate the moved layer.

Definition at line 389 of file SKMultiLayerRenderCanvas.cs.

6.53.3.6 RemoveLayer()

```
void VectSharp.Canvas.SKMultiLayerRenderCanvas.RemoveLayer (
    int layer )
```

Remove the specified layer from the image.

Parameters

<i>layer</i>	The index of the layer to remove.
--------------	-----------------------------------

Definition at line 340 of file SKMultiLayerRenderCanvas.cs.

6.53.3.7 RenderAtResolution()

```
RenderTargetBitmap VectSharp.Canvas.SKMultiLayerRenderCanvas.RenderAtResolution (
    int width,
    int height,
    SKColor? background = null )
```

Render the image at to a bitmap at the specified resolution.

Parameters

<i>width</i>	The width of the rendered image. Note that the actual width of the returned image might be lower than this, depending on the aspect ratio of the image.
<i>height</i>	The height of the rendered image. Note that the actual height of the returned image might be lower than this, depending on the aspect ratio of the image.
<i>background</i>	The background colour for the image. If this is <code>null</code> , the current background colour is used.

Returns

A `RenderTargetBitmap` containing the image rendered at the specified resolution.

Definition at line 735 of file `SKMultiLayerRenderCanvas.cs`.

6.53.3.8 SwitchLayers()

```
void VectSharp.Canvas.SKMultiLayerRenderCanvas.SwitchLayers (
    int layer1,
    int layer2 )
```

Switch the position of the two specified layers.

Parameters

<i>layer1</i>	The index of the first layer to switch.
<i>layer2</i>	The index of the second layer to switch.

Definition at line 364 of file `SKMultiLayerRenderCanvas.cs`.

6.53.3.9 UpdateLayer()

```
void VectSharp.Canvas.SKMultiLayerRenderCanvas.UpdateLayer (
    int layer,
    SKRenderContext newContent,
    SKRenderAction newTransform )
```

Replace a single layer with the specified content.

Parameters

<i>layer</i>	The index of the layer to replace.
<i>newContent</i>	The new contents of the layer. A Page can be converted to a SKRenderContext through the <code>CopyToSKRenderContext</code> method.
<i>newTransform</i>	The new transform for the layer.

Definition at line 244 of file SKMultiLayerRenderCanvas.cs.

6.53.3.10 UpdateWith()

```
void VectSharp.Canvas.SKMultiLayerRenderCanvas.UpdateWith (
    List< SKRenderContext > contents,
    List< SKRenderAction > contentTransforms,
    Colour backgroundColour,
    double width,
    double height )
```

Replace the contents of the [SKMultiLayerRenderCanvas](#) with the specified layers.

Parameters

<i>contents</i>	The contents of the canvas. Each element in this list represents a layer. A Page can be converted to a SKRenderContext through the CopyToSKRenderContext method.
<i>contentTransforms</i>	A list of transforms associated with each layer. This list should contain the same number of elements as <i>contents</i> . This is useful to manipulate the position of each layer individually.
<i>backgroundColour</i>	The background colour of the canvas.
<i>width</i>	The width of the canvas and the page it contains.
<i>height</i>	The height of the canvas and the page it contains.

Definition at line 166 of file SKMultiLayerRenderCanvas.cs.

6.53.4 Member Data Documentation

6.53.4.1 LayerTransforms

```
List<SKRenderAction> VectSharp.Canvas.SKMultiLayerRenderCanvas.LayerTransforms
```

The list of transforms associated with each layer.

Definition at line 64 of file SKMultiLayerRenderCanvas.cs.

6.53.4.2 RenderActions

```
List<List<SKRenderAction> > VectSharp.Canvas.SKMultiLayerRenderCanvas.RenderActions
```

The list of render actions, each element in this list is itself a list, containing the actions that correspond to a layer in the image.

Definition at line 59 of file SKMultiLayerRenderCanvas.cs.

6.53.4.3 RenderLock

```
object VectSharp.Canvas.SKMultiLayerRenderCanvas.RenderLock = new object()
```

An lock for the rendering loop. The public methods of this class already lock on this, but you may need it if you want to directly manipulate the contents of the canvas.

Definition at line 726 of file SKMultiLayerRenderCanvas.cs.

6.53.5 Property Documentation

6.53.5.1 PageHeight

```
double VectSharp.Canvas.SKMultiLayerRenderCanvas.PageHeight [get], [set]
```

The height of the page that is rendered on this canvas.

Definition at line 53 of file SKMultiLayerRenderCanvas.cs.

6.53.5.2 PageWidth

```
double VectSharp.Canvas.SKMultiLayerRenderCanvas.PageWidth [get], [set]
```

The width of the page that is rendered on this canvas.

Definition at line 48 of file SKMultiLayerRenderCanvas.cs.

6.53.5.3 Spinner

```
Func<long, Bitmap> VectSharp.Canvas.SKMultiLayerRenderCanvas.Spinner = null [get], [set]
```

If the image to draw is not already cached, this method is called with an argument containing the number of milliseconds since the image was last rendered. The method can return a Bitmap that will be drawn on the canvas in order to let users know that the image is being rendered in background.

Definition at line 70 of file SKMultiLayerRenderCanvas.cs.

The documentation for this class was generated from the following file:

- VectSharp.Canvas/SKMultiLayerRenderCanvas.cs

6.54 VectSharp.Canvas.SKRenderAction Class Reference

Represents a light-weight rendering action.

Inheritance diagram for VectSharp.Canvas.SKRenderAction:

Public Types

- enum [ActionTypes](#) {
[ActionTypes.Path](#), [ActionTypes.Text](#), [ActionTypes.RasterImage](#), [ActionTypes.Transform](#),
[ActionTypes.Save](#), [ActionTypes.Restore](#), [ActionTypes.Clip](#) }

Types of rendering actions.

Public Member Functions

- void [InvalidateHitTestPath](#) ()
- void [InvalidateVisual](#) ()
- void [InvalidateZIndex](#) ()
- void [InvalidateAll](#) ()
- void [Dispose](#) ()

Static Public Member Functions

- static [SKRenderAction PathAction](#) (SKPath path, SKPaint paint, string tag=null)
Creates a new [SKRenderAction](#) representing a path.
- static [SKRenderAction ClipAction](#) (SKPath clippingPath, string tag=null)
Creates a new [SKRenderAction](#) representing a clipping action.
- static [SKRenderAction TextAction](#) (string text, float x, float y, SKFont font, SKPaint paint, string tag=null)
Creates a new [SKRenderAction](#) representing text.
- static [SKRenderAction ImageAction](#) (string imageId, SKRect sourceRect, SKRect destinationRect, string tag=null)
Creates a new [SKRenderAction](#) representing an image.
- static [SKRenderAction TransformAction](#) (SKMatrix transform, string tag=null)
Creates a new [SKRenderAction](#) representing a transform.
- static [SKRenderAction SaveAction](#) (string tag=null)
Creates a new [SKRenderAction](#) that saves the current graphics state.
- static [SKRenderAction RestoreAction](#) (string tag=null)
Creates a new [SKRenderAction](#) that saves the current graphics state.

Public Attributes

- bool [Disposed](#) => disposedValue
Returns a boolean value indicating whether the current instance has been disposed.

Properties

- [ActionTypes](#) [ActionType](#) [get]
Type of the rendering action.
- SKPath [Path](#) [get, set]
Path that needs to be rendered (null if the action type is not [ActionTypes.Path](#)). If you change this, you probably want to call this object's [InvalidateHitTestPath](#) method.
- string [Text](#) [get, set]
Text that needs to be rendered (null if the action type is not [ActionTypes.Text](#)). If you change this, you probably want to call this object's [InvalidateHitTestPath](#) method.
- SKFont [Font](#) [get, set]
The font that will be used to render the text (null if the action type is not [ActionTypes.Text](#)). If you change this, you probably want to call this object's [InvalidateHitTestPath](#) method.
- float [TextX](#) [get, set]
The X coordinate at which the text will be drawn (null if the action type is not [ActionTypes.Text](#)). If you change this, you probably want to call this object's [InvalidateHitTestPath](#) method.
- float [TextY](#) [get, set]
The Y coordinate at which the text will be drawn (null if the action type is not [ActionTypes.Text](#)). If you change this, you probably want to call this object's [InvalidateHitTestPath](#) method.
- SKPaint [Paint](#) [get, set]
Paint used to render the text or path (null if the action type is neither [ActionTypes.Text](#) nor [ActionTypes.Path](#)). If you change this, you probably want to call this object's [InvalidateHitTestPath](#) method.
- string [ImageId](#) [get, set]
Univocal identifier of the image that needs to be drawn.
- SKRect? [ImageSource](#) [get, set]
The source rectangle of the image (null if the action type is not [ActionTypes.RasterImage](#)). If you change this, you probably want to call this object's [InvalidateVisual](#) method.
- SKRect? [ImageDestination](#) [get, set]
The destination rectangle of the image (null if the action type is not [ActionTypes.RasterImage](#)). If you change this, you probably want to call this object's [InvalidateHitTestPath](#) method.
- SKMatrix? [Transform](#) = null [get, set]
The transformation matrix that will be applied to the current coordinate system (null if the action type is not [ActionTypes.Transform](#)). If you change this, you probably want to call this object's [InvalidateVisual](#) method.
- string [Tag](#) [get]
A tag to access the [SKRenderAction](#).
- uint [ZIndex](#) = 0 [get, set]
The Z-index of the rendering action (an action with a higher Z-index will always appear above an action with a lower Z-index). The more different values there are for the Z-index, the slower the rendering, so keep use of this property to a minimum. If you change this, you probably want to call this object's [InvalidateZIndex](#) method.
- object [Payload](#) [get, set]
An arbitrary object associated with the [RenderAction](#).
- Avalonia.Controls.Canvas [Parent](#) [get]
The container of this [SKRenderAction](#).

Events

- `EventHandler< Avalonia.Input.PointerEventArgs > PointerEnter`
Raised when the pointer enters the area covered by the [SKRenderAction](#).
- `EventHandler< Avalonia.Input.PointerEventArgs > PointerLeave`
Raised when the pointer leaves the area covered by the [SKRenderAction](#).
- `EventHandler< Avalonia.Input.PointerPressedEventArgs > PointerPressed`
Raised when the pointer is pressed while over the area covered by the [SKRenderAction](#).
- `EventHandler< Avalonia.Input.PointerReleasedEventArgs > PointerReleased`
Raised when the pointer is released after a [PointerPressed](#) event.

6.54.1 Detailed Description

Represents a light-weight rendering action.

Definition at line 29 of file `SKRenderContext.cs`.

6.54.2 Member Enumeration Documentation

6.54.2.1 ActionTypes

```
enum VectSharp.Canvas.SKRenderAction.ActionTypes [strong]
```

Types of rendering actions.

Enumerator

Path	The render action represents a path object.
Text	The render action represents a text object.
RasterImage	The render action represents a raster image.
Transform	The render action represents a transformation of the coordinate space.
Save	The render action represents saving the current graphics state.
Restore	The render action represents restoring the last saved graphics state.
Clip	The render action represents an update of the current clip path.

Definition at line 41 of file `SKRenderContext.cs`.

6.54.3 Member Function Documentation

6.54.3.1 ClipAction()

```
static SKRenderAction VectSharp.Canvas.SKRenderAction.ClipAction (
    SKPath clippingPath,
    string tag = null ) [static]
```

Creates a new [SKRenderAction](#) representing a clipping action.

Parameters

<i>clippingPath</i>	The path to be used for clipping.
<i>tag</i>	A tag to access the SKRenderAction .

Returns

A new [SKRenderAction](#) representing a clipping action.

Definition at line 329 of file SKRenderContext.cs.

6.54.3.2 ImageAction()

```
static SKRenderAction VectSharp.Canvas.SKRenderAction.ImageAction (
    string imageId,
    SKRect sourceRect,
    SKRect destinationRect,
    string tag = null ) [static]
```

Creates a new [SKRenderAction](#) representing an image.

Parameters

<i>imageId</i>	The univocal identifier of the image to draw.
<i>sourceRect</i>	The source rectangle of the image.
<i>destinationRect</i>	The destination rectangle of the image.
<i>tag</i>	A tag to access the SKRenderAction . If this is null this SKRenderAction is not visible in the hit test.

Returns

A new [SKRenderAction](#) representing an image.

Definition at line 381 of file SKRenderContext.cs.

6.54.3.3 InvalidateAll()

```
void VectSharp.Canvas.SKRenderAction.InvalidateAll ( )
```

This methods signals to the [Parent](#) that the Z-index, shape and visual properties (e.g. the colour) of this object have changed and triggers a redraw.

If you make changes to more than one [SKRenderAction](#) contained in the same [Canvas](#), you only need to invalidate the last one.

This method should only be called after the output has been fully initialized.

Definition at line 287 of file SKRenderContext.cs.

6.54.3.4 InvalidateHitTestPath()

```
void VectSharp.Canvas.SKRenderAction.InvalidateHitTestPath ( )
```

Signals to this object that its shape has changed a new path needs to be computed for the purpose of hit-testing. Also signals to the [Parent](#) that the visual properties of this object have changed and triggers a redraw.

This method should be called whenever the "shape" of the object represented by the [SKRenderAction](#) changes. If only the visual properties of this object have changed (e.g. the colour), call the [InvalidateVisual](#) method instead.

If you make changes to more than one [SKRenderAction](#) contained in the same [Canvas](#), you only need to invalidate the last one.

This method should only be called after the output has been fully initialized.

Definition at line 216 of file SKRenderContext.cs.

6.54.3.5 InvalidateVisual()

```
void VectSharp.Canvas.SKRenderAction.InvalidateVisual ( )
```

This methods signals to the [Parent](#) that the visual properties (e.g. the colour) of this object have changed and triggers a redraw.

If the "shape" of the object has changed as well, call the [InvalidateHitTestPath](#) method instead. If the Z-index of the object has changed, call the [InvalidateZIndex](#) method instead. If both the "shape" and the Z-index of the object have changed, call the [InvalidateAll](#) method.

If you make changes to more than one [SKRenderAction](#) contained in the same [Canvas](#), you only need to invalidate the last one.

This method should only be called after the output has been fully initialized.

Definition at line 266 of file SKRenderContext.cs.

6.54.3.6 InvalidateZIndex()

```
void VectSharp.Canvas.SKRenderAction.InvalidateZIndex ( )
```

This methods signals to the [Parent](#) that the Z-index and visual properties (e.g. the colour) of this object have changed and triggers a redraw.

If the "shape" of the object has changed as well, call the [InvalidateAll](#) method instead.

If you make changes to more than one [SKRenderAction](#) contained in the same [Canvas](#), you only need to invalidate the last one.

This method should only be called after the output has been fully initialized.

Definition at line 277 of file SKRenderContext.cs.

6.54.3.7 PathAction()

```
static SKRenderAction VectSharp.Canvas.SKRenderAction.PathAction (
    SKPath path,
    SKPaint paint,
    string tag = null ) [static]
```

Creates a new [SKRenderAction](#) representing a path.

Parameters

<i>path</i>	The geometry to be rendered.
<i>paint</i>	The paint used to fill or stroke the path.
<i>tag</i>	A tag to access the SKRenderAction . If this is null this SKRenderAction is not visible in the hit test.

Returns

A new [SKRenderAction](#) representing a path.

Definition at line 305 of file SKRenderContext.cs.

6.54.3.8 RestoreAction()

```
static SKRenderAction VectSharp.Canvas.SKRenderAction.RestoreAction (
    string tag = null ) [static]
```

Creates a new [SKRenderAction](#) that saves the current graphics state.

Parameters

<i>tag</i>	A tag to access the SKRenderAction .
------------	--

Returns

A new [SKRenderAction](#) that restores the last saved graphics state.

Definition at line 435 of file SKRenderContext.cs.

6.54.3.9 SaveAction()

```
static SKRenderAction VectSharp.Canvas.SKRenderAction.SaveAction (  
    string tag = null ) [static]
```

Creates a new [SKRenderAction](#) that saves the current graphics state.

Parameters

<i>tag</i>	A tag to access the SKRenderAction .
------------	--

Returns

A new [SKRenderAction](#) that saves the current graphics state.

Definition at line 421 of file SKRenderContext.cs.

6.54.3.10 TextAction()

```
static SKRenderAction VectSharp.Canvas.SKRenderAction.TextAction (  
    string text,  
    float x,  
    float y,  
    SKFont font,  
    SKPaint paint,  
    string tag = null ) [static]
```

Creates a new [SKRenderAction](#) representing text.

Parameters

<i>text</i>	The text to be rendered.
<i>x</i>	The X coordinate at which the text will be drawn.
<i>y</i>	The Y coordinate at which the text will be drawn.
<i>font</i>	The font to be used to render the text.
<i>paint</i>	The paint to be used to fill or stroke the text.
<i>tag</i>	A tag to access the SKRenderAction . If this is null this SKRenderAction is not visible in the hit test.

Returns

A new [SKRenderAction](#) representing text.

Definition at line 349 of file SKRenderContext.cs.

6.54.3.11 TransformAction()

```
static SKRenderAction VectSharp.Canvas.SKRenderAction.TransformAction (
    SKMatrix transform,
    string tag = null ) [static]
```

Creates a new [SKRenderAction](#) representing a transform.

Parameters

<i>transform</i>	The transform to apply.
<i>tag</i>	A tag to access the SKRenderAction .

Returns

A new [SKRenderAction](#) representing a transform.

Definition at line 406 of file SKRenderContext.cs.

6.54.4 Member Data Documentation

6.54.4.1 Disposed

```
bool VectSharp.Canvas.SKRenderAction.Disposed => disposedValue
```

Returns a boolean value indicating whether the current instance has been disposed.

Definition at line 34 of file SKRenderContext.cs.

6.54.5 Property Documentation

6.54.5.1 ActionType

```
ActionTypes VectSharp.Canvas.SKRenderAction.ActionType [get]
```

Type of the rendering action.

Definition at line 82 of file SKRenderContext.cs.

6.54.5.2 Font

```
SKFont VectSharp.Canvas.SKRenderAction.Font [get], [set]
```

The font that will be used to render the text (null if the action type is not [ActionTypes.Text](#)). If you change this, you probably want to call this object's [InvalidateHitTestPath](#) method.

Definition at line 100 of file SKRenderContext.cs.

6.54.5.3 ImageDestination

```
SKRect? VectSharp.Canvas.SKRenderAction.ImageDestination [get], [set]
```

The destination rectangle of the image (null if the action type is not [ActionTypes.RasterImage](#)). If you change this, you probably want to call this object's [InvalidateHitTestPath](#) method.

Definition at line 130 of file SKRenderContext.cs.

6.54.5.4 ImageId

```
string VectSharp.Canvas.SKRenderAction.ImageId [get], [set]
```

Univocal identifier of the image that needs to be drawn.

Definition at line 120 of file SKRenderContext.cs.

6.54.5.5 ImageSource

```
SKRect? VectSharp.Canvas.SKRenderAction.ImageSource [get], [set]
```

The source rectangle of the image (null if the action type is not [ActionTypes.RasterImage](#)). If you change this, you probably want to call this object's [InvalidateVisual](#) method.

Definition at line 125 of file SKRenderContext.cs.

6.54.5.6 Paint

```
SKPaint VectSharp.Canvas.SKRenderAction.Paint [get], [set]
```

Paint used to render the text or path (null if the action type is neither [ActionTypes.Text](#) nor [ActionTypes.Path](#)). If you change this, you probably want to call this object's [InvalidateHitTestPath](#) method.

Definition at line 115 of file SKRenderContext.cs.

6.54.5.7 Parent

```
Avalonia.Controls.Canvas VectSharp.Canvas.SKRenderAction.Parent [get]
```

The container of this [SKRenderAction](#).

Definition at line 159 of file SKRenderContext.cs.

6.54.5.8 Path

```
SKPath VectSharp.Canvas.SKRenderAction.Path [get], [set]
```

Path that needs to be rendered (null if the action type is not [ActionTypes.Path](#)). If you change this, you probably want to call this object's [InvalidateHitTestPath](#) method.

Definition at line 87 of file SKRenderContext.cs.

6.54.5.9 Payload

```
object VectSharp.Canvas.SKRenderAction.Payload [get], [set]
```

An arbitrary object associated with the [RenderAction](#).

Definition at line 152 of file SKRenderContext.cs.

6.54.5.10 Tag

```
string VectSharp.Canvas.SKRenderAction.Tag [get]
```

A tag to access the [SKRenderAction](#).

Definition at line 140 of file SKRenderContext.cs.

6.54.5.11 Text

```
string VectSharp.Canvas.SKRenderAction.Text [get], [set]
```

Text that needs to be rendered (null if the action type is not [ActionTypes.Text](#)). If you change this, you probably want to call this object's [InvalidateHitTestPath](#) method.

Definition at line 95 of file SKRenderContext.cs.

6.54.5.12 TextX

```
float VectSharp.Canvas.SKRenderAction.TextX [get], [set]
```

The X coordinate at which the text will be drawn (null if the action type is not [ActionTypes.Text](#)). If you change this, you probably want to call this object's [InvalidateHitTestPath](#) method.

Definition at line 105 of file SKRenderContext.cs.

6.54.5.13 TextY

```
float VectSharp.Canvas.SKRenderAction.TextY [get], [set]
```

The Y coordinate at which the text will be drawn (null if the action type is not [ActionTypes.Text](#)). If you change this, you probably want to call this object's [InvalidateHitTestPath](#) method.

Definition at line 110 of file SKRenderContext.cs.

6.54.5.14 Transform

```
SKMatrix? VectSharp.Canvas.SKRenderAction.Transform = null [get], [set]
```

The transformation matrix that will be applied to the current coordinate system (null if the action type is not [ActionTypes.Transform](#)). If you change this, you probably want to call this object's [InvalidateVisual](#) method.

Definition at line 135 of file SKRenderContext.cs.

6.54.5.15 ZIndex

```
uint VectSharp.Canvas.SKRenderAction.ZIndex = 0 [get], [set]
```

The Z-index of the rendering action (an action with a higher Z-index will always appear above an action with a lower Z-index). The more different values there are for the Z-index, the slower the rendering, so keep use of this property to a minimum. If you change this, you probably want to call this object's [InvalidateZIndex](#) method.

Definition at line 147 of file SKRenderContext.cs.

6.54.6 Event Documentation

6.54.6.1 PointerEnter

```
EventHandler<Avalonia.Input.PointerEventArgs> VectSharp.Canvas.SKRenderAction.PointerEnter
```

Raised when the pointer enters the area covered by the [SKRenderAction](#).

Definition at line 170 of file SKRenderContext.cs.

6.54.6.2 PointerLeave

```
EventHandler<Avalonia.Input.PointerEventArgs> VectSharp.Canvas.SKRenderAction.PointerLeave
```

Raised when the pointer leaves the area covered by the [SKRenderAction](#).

Definition at line 175 of file SKRenderContext.cs.

6.54.6.3 PointerPressed

```
EventHandler<Avalonia.Input.PointerPressedEventArgs> VectSharp.Canvas.SKRenderAction.Pointer↵  
Pressed
```

Raised when the pointer is pressed while over the area covered by the [SKRenderAction](#).

Definition at line 180 of file SKRenderContext.cs.

6.54.6.4 PointerReleased

```
EventHandler<Avalonia.Input.PointerReleasedEventArgs> VectSharp.Canvas.SKRenderAction.Pointer↵  
Released
```

Raised when the pointer is released after a [PointerPressed](#) event.

Definition at line 185 of file SKRenderContext.cs.

The documentation for this class was generated from the following file:

- VectSharp.Canvas/SKRenderContext.cs

6.55 VectSharp.Canvas.SKRenderContext Class Reference

Represents a page that has been prepared for fast rendering using the SkiaSharp renderer.

6.55.1 Detailed Description

Represents a page that has been prepared for fast rendering using the SkiaSharp renderer.

Definition at line 515 of file SKRenderContext.cs.

The documentation for this class was generated from the following file:

- VectSharp.Canvas/SKRenderContext.cs

6.56 VectSharp.Canvas.SKRenderContextInterpreter Class Reference

Contains methods to render a [Page](#) to an Avalonia.Controls.Canvas using the SkiaSharp renderer.

Static Public Member Functions

- static [SKMultiLayerRenderCanvas PaintToSKCanvas](#) (this [Document](#) document, double? width=null, double? height=null, [Colour?](#) background=null, [AvaloniaContextInterpreter.TextOptions](#) textOption=[AvaloniaContextInterpreter.TextOptions.ConvertIfNecessary](#))
Render a [Document](#) to an Avalonia.Controls.Canvas using the SkiaSharp renderer. Each page corresponds to a layer in the image.
- static [SKMultiLayerRenderCanvas PaintToSKCanvas](#) (this [Document](#) document, Dictionary< string, Func< [SKRenderAction](#), IEnumerable< [SKRenderAction](#) >>> taggedActions, bool removeTaggedActionsAfterExecution=true, double? width=null, double? height=null, [Colour?](#) background=null, [AvaloniaContextInterpreter.TextOptions](#) textOption=[AvaloniaContextInterpreter.TextOptions.ConvertIfNecessary](#))
Render a [Document](#) to an Avalonia.Controls.Canvas using the SkiaSharp renderer. Each page corresponds to a layer in the image.
- static [SKMultiLayerRenderCanvas PaintToSKCanvas](#) (this [Document](#) document, Dictionary< string, Func< [SKRenderAction](#), IEnumerable< [SKRenderAction](#) >>> taggedActions, Dictionary< string, (SKBitmap, bool)> images, bool removeTaggedActionsAfterExecution=true, double? width=null, double? height=null, [Colour?](#) background=null, [AvaloniaContextInterpreter.TextOptions](#) textOption=[AvaloniaContextInterpreter.TextOptions.ConvertIfNecessary](#))
Render a [Document](#) to an Avalonia.Controls.Canvas using the SkiaSharp renderer. Each page corresponds to a layer in the image.
- static [SKMultiLayerRenderCanvas PaintToSKCanvas](#) (this [Page](#) page, [AvaloniaContextInterpreter.TextOptions](#) textOption=[AvaloniaContextInterpreter.TextOptions.ConvertIfNecessary](#))
Render a [Page](#) to an Avalonia.Controls.Canvas using the SkiaSharp renderer.
- static [SKMultiLayerRenderCanvas PaintToSKCanvas](#) (this [Page](#) page, Dictionary< string, Func< [SKRenderAction](#), IEnumerable< [SKRenderAction](#) >>> taggedActions, bool removeTaggedActionsAfterExecution=true, [AvaloniaContextInterpreter.TextOptions](#) textOption=[AvaloniaContextInterpreter.TextOptions.ConvertIfNecessary](#))
Render a [Page](#) to an Avalonia.Controls.Canvas using the SkiaSharpRenderer.
- static [SKMultiLayerRenderCanvas PaintToSKCanvas](#) (this [Page](#) page, Dictionary< string, Func< [SKRenderAction](#), IEnumerable< [SKRenderAction](#) >>> taggedActions, Dictionary< string, (SKBitmap, bool)> images, bool removeTaggedActionsAfterExecution=true, [AvaloniaContextInterpreter.TextOptions](#) textOption=[AvaloniaContextInterpreter.TextOptions.ConvertIfNecessary](#))
Render a [Page](#) to an Avalonia.Controls.Canvas using the SkiaSharpRenderer.
- static [SKRenderContext CopyToSKRenderContext](#) (this [Page](#) page, [AvaloniaContextInterpreter.TextOptions](#) textOption=[AvaloniaContextInterpreter.TextOptions.ConvertIfNecessary](#))
Render a [Page](#) to a [SKRenderContext](#). This can be drawn using the SkiaSharpRenderer by adding it to a [SKMultiLayerRenderCanvas](#).
- static [SKRenderContext CopyToSKRenderContext](#) (this [Page](#) page, Dictionary< string, Func< [SKRenderAction](#), IEnumerable< [SKRenderAction](#) >>> taggedActions, bool removeTaggedActionsAfterExecution=true, [AvaloniaContextInterpreter.TextOptions](#) textOption=[AvaloniaContextInterpreter.TextOptions.ConvertIfNecessary](#))

Render a [Page](#) to a [SKRenderContext](#). This can be drawn using the [SkiaSharpRenderer](#) by adding it to a [SKMultiLayerRenderCanvas](#).

- static [SKRenderContext](#) [CopyToSKRenderContext](#) (this [Page](#) page, Dictionary< string, Func< [SKRenderAction](#), IEnumerable< [SKRenderAction](#) >>> taggedActions, Dictionary< string,(SKBitmap, bool)> images, bool removeTaggedActionsAfterExecution=true, [AvaloniaContextInterpreter.TextOptions](#) textOption=[AvaloniaContextInterpreter.TextOptions.ConvertIfNecessary](#))

Render a [Page](#) to a [SKRenderContext](#). This can be drawn using the [SkiaSharpRenderer](#) by adding it to a [SKMultiLayerRenderCanvas](#).

6.56.1 Detailed Description

Contains methods to render a [Page](#) to an [Avalonia.Controls.Canvas](#) using the [SkiaSharp](#) renderer.

Definition at line 1121 of file [SKRenderContext.cs](#).

6.56.2 Member Function Documentation

6.56.2.1 CopyToSKRenderContext() [1/3]

```
static SKRenderContext VectSharp.Canvas.SKRenderContextInterpreter.CopyToSKRenderContext (
    this Page page,
    AvaloniaContextInterpreter.TextOptions textOption = AvaloniaContextInterpreter.TextOptions.ConvertIfNecessary
) [static]
```

Render a [Page](#) to a [SKRenderContext](#). This can be drawn using the [SkiaSharpRenderer](#) by adding it to a [SKMultiLayerRenderCanvas](#).

Parameters

<i>page</i>	The Page to render.
<i>textOption</i>	Defines whether text items should be converted into paths when drawing.

Returns

A [SKRenderContext](#) containing the rendered graphics objects.

Definition at line 1235 of file [SKRenderContext.cs](#).

6.56.2.2 CopyToSKRenderContext() [2/3]

```
static SKRenderContext VectSharp.Canvas.SKRenderContextInterpreter.CopyToSKRenderContext (
    this Page page,
    Dictionary< string, Func< SKRenderAction, IEnumerable< SKRenderAction >>> taggedActions,
    Dictionary< string, (SKBitmap, bool)> images, bool removeTaggedActionsAfterExecution=true,
    AvaloniaContextInterpreter.TextOptions textOption=AvaloniaContextInterpreter.TextOptions.ConvertIfNecessary
)
```

```

        bool removeTaggedActionsAfterExecution = true,
        AvaloniaContextInterpreter.TextOptions textOption = AvaloniaContextInterpreter.TextOptions.Convert
    ) [static]

```

Render a [Page](#) to a [SKRenderContext](#). This can be drawn using the [SkiaSharpRenderer](#) by adding it to a [SKMultiLayerRenderCanvas](#).

Parameters

<i>page</i>	The Page to render.
<i>taggedActions</i>	A Dictionary containing the actions that will be performed on items with the corresponding tag. These should be functions that accept one parameter of type SKRenderAction and return an IEnumerable<SKRenderAction> of the render actions that will actually be added to the plot.
<i>removeTaggedActionsAfterExecution</i>	Whether the actions should be removed from <i>taggedActions</i> after their execution. Set to false if the same action should be performed on multiple items with the same tag.
<i>textOption</i>	Defines whether text items should be converted into paths when drawing.

Returns

A [SKRenderContext](#) containing the rendered graphics objects.

Definition at line 1249 of file [SKRenderContext.cs](#).

6.56.2.3 CopyToSKRenderContext() [3/3]

```

static SKRenderContext VectSharp.Canvas.SKRenderContextInterpreter.CopyToSKRenderContext (
    this Page page,
    Dictionary< string, Func< SKRenderAction, IEnumerable< SKRenderAction >>> taggedActions,
    Dictionary< string, (SKBitmap, bool)> images,
    bool removeTaggedActionsAfterExecution = true,
    AvaloniaContextInterpreter.TextOptions textOption = AvaloniaContextInterpreter.TextOptions.Convert
) [static]

```

Render a [Page](#) to a [SKRenderContext](#). This can be drawn using the [SkiaSharpRenderer](#) by adding it to a [SKMultiLayerRenderCanvas](#).

Parameters

<i>page</i>	The Page to render.
<i>taggedActions</i>	A Dictionary containing the actions that will be performed on items with the corresponding tag. These should be functions that accept one parameter of type SKRenderAction and return an IEnumerable<SKRenderAction> of the render actions that will actually be added to the plot.

Parameters

<i>images</i>	A dictionary that associates to each raster image path (or data URL) the image rendered as a SKBitmap and a boolean value indicating whether it should be drawn as "pixelated" or not. This will be populated automatically as the page is rendered. If you are rendering multiple Pages (or you are rendering the same page multiple times), it will be beneficial to keep a reference to this dictionary and pass it again on further rendering requests; otherwise, you can just pass an empty dictionary.
<i>removeTaggedActionsAfterExecution</i>	Whether the actions should be removed from <i>taggedActions</i> after their execution. Set to false if the same action should be performed on multiple items with the same tag.
<i>textOption</i>	Defines whether text items should be converted into paths when drawing.

Returns

A [SKRenderContext](#) containing the rendered graphics objects.

Definition at line 1265 of file SKRenderContext.cs.

6.56.2.4 PaintToSKCanvas() [1/6]

```
static SKMultiLayerRenderCanvas VectSharp.Canvas.SKRenderContextInterpreter.PaintToSKCanvas (
    this Document document,
    Dictionary< string, Func< SKRenderAction, IEnumerable< SKRenderAction >>> taggedActions,
    bool removeTaggedActionsAfterExecution = true,
    double? width = null,
    double? height = null,
    Colour? background = null,
    AvaloniaContextInterpreter.TextOptions textOption = AvaloniaContextInterpreter.TextOptions.Convert
) [static]
```

Render a [Document](#) to an Avalonia.Controls.Canvas using the SkiaSharp renderer. Each page corresponds to a layer in the image.

Parameters

<i>document</i>	The Document to render.
<i>taggedActions</i>	A Dictionary containing the actions that will be performed on items with the corresponding tag. These should be functions that accept one parameter of type SKRenderAction and return an IEnumerable<SKRenderAction> of the render actions that will actually be added to the plot.
<i>removeTaggedActionsAfterExecution</i>	Whether the actions should be removed from <i>taggedActions</i> after their execution. Set to false if the same action should be performed on multiple items with the same tag.
<i>width</i>	The width of the document. If this is <code>null</code> , the width of the largest page is used.

Parameters

<i>height</i>	The height of the document. If this is <code>null</code> , the height of the largest page is used.
<i>background</i>	The background colour of the document. If this is <code>null</code> , a transparent background is used.
<i>textOption</i>	Defines whether text items should be converted into paths when drawing.

Returns

An Avalonia.Controls.Canvas containing the rendered graphics objects.

Definition at line 1164 of file SKRenderContext.cs.

6.56.2.5 PaintToSKCanvas() [2/6]

```
static SKMultiLayerRenderCanvas VectSharp.Canvas.SKRenderContextInterpreter.PaintToSKCanvas (
    this Document document,
    Dictionary< string, Func< SKRenderAction, IEnumerable< SKRenderAction >>> taggedActions,
    Dictionary< string, (SKBitmap, bool)> images,
    bool removeTaggedActionsAfterExecution = true,
    double? width = null,
    double? height = null,
    Colour? background = null,
    AvaloniaContextInterpreter.TextOptions textOption = AvaloniaContextInterpreter.TextOptions.Convert
) [static]
```

Render a [Document](#) to an Avalonia.Controls.Canvas using the SkiaSharp renderer. Each page corresponds to a layer in the image.

Parameters

<i>document</i>	The Document to render.
<i>taggedActions</i>	A Dictionary containing the actions that will be performed on items with the corresponding tag. These should be functions that accept one parameter of type SKRenderAction and return an <code>IEnumerable<SKRenderAction></code> of the render actions that will actually be added to the plot.
<i>images</i>	A dictionary that associates to each raster image path (or data URL) the image rendered as a <code>SKBitmap</code> and a boolean value indicating whether it should be drawn as "pixelated" or not. This will be populated automatically as the page is rendered. If you are rendering multiple Pages (or you are rendering the same page multiple times), it will be beneficial to keep a reference to this dictionary and pass it again on further rendering requests; otherwise, you can just pass an empty dictionary.
<i>removeTaggedActionsAfterExecution</i>	Whether the actions should be removed from <i>taggedActions</i> after their execution. Set to false if the same action should be performed on multiple items with the same tag.

Parameters

<i>width</i>	The width of the document. If this is <code>null</code> , the width of the largest page is used.
<i>height</i>	The height of the document. If this is <code>null</code> , the height of the largest page is used.
<i>background</i>	The background colour of the document. If this is <code>null</code> , a transparent background is used.
<i>textOption</i>	Defines whether text items should be converted into paths when drawing.

Returns

An Avalonia.Controls.Canvas containing the rendered graphics objects.

Definition at line 1183 of file SKRenderContext.cs.

6.56.2.6 PaintToSKCanvas() [3/6]

```
static SKMultiLayerRenderCanvas VectSharp.Canvas.SKRenderContextInterpreter.PaintToSKCanvas (
    this Document document,
    double? width = null,
    double? height = null,
    Colour? background = null,
    AvaloniaContextInterpreter.TextOptions textOption = AvaloniaContextInterpreter.TextOptions.Convert
) [static]
```

Render a [Document](#) to an Avalonia.Controls.Canvas using the SkiaSharp renderer. Each page corresponds to a layer in the image.

Parameters

<i>document</i>	The Document to render.
<i>width</i>	The width of the document. If this is <code>null</code> , the width of the largest page is used.
<i>height</i>	The height of the document. If this is <code>null</code> , the height of the largest page is used.
<i>background</i>	The background colour of the document. If this is <code>null</code> , a transparent background is used.
<i>textOption</i>	Defines whether text items should be converted into paths when drawing.

Returns

An Avalonia.Controls.Canvas containing the rendered graphics objects.

Definition at line 1147 of file SKRenderContext.cs.

6.56.2.7 PaintToSKCanvas() [4/6]

```
static SKMultiLayerRenderCanvas VectSharp.Canvas.SKRenderContextInterpreter.PaintToSKCanvas (
    this Page page,
    AvaloniaContextInterpreter.TextOptions textOption = AvaloniaContextInterpreter.TextOptions.Convert
) [static]
```

Render a [Page](#) to an Avalonia.Controls.Canvas using the SkiaSharp renderer.

Parameters

<i>page</i>	The Page to render.
<i>textOption</i>	Defines whether text items should be converted into paths when drawing.

Returns

An Avalonia.Controls.Canvas containing the rendered graphics objects.

Definition at line 1194 of file SKRenderContext.cs.

6.56.2.8 PaintToSKCanvas() [5/6]

```
static SKMultiLayerRenderCanvas VectSharp.Canvas.SKRenderContextInterpreter.PaintToSKCanvas (
    this Page page,
    Dictionary< string, Func< SKRenderAction, IEnumerable< SKRenderAction >>> tagged
Actions,
    bool removeTaggedActionsAfterExecution = true,
    AvaloniaContextInterpreter.TextOptions textOption = AvaloniaContextInterpreter.TextOptions.Convert
) [static]
```

Render a [Page](#) to an Avalonia.Controls.Canvas using the SkiaSharpRenderer.

Parameters

<i>page</i>	The Page to render.
<i>taggedActions</i>	A Dictionary containing the actions that will be performed on items with the corresponding tag. These should be functions that accept one parameter of type SKRenderAction and return an IEnumerable<SKRenderAction> of the render actions that will actually be added to the plot.
<i>removeTaggedActionsAfterExecution</i>	Whether the actions should be removed from <i>taggedActions</i> after their execution. Set to false if the same action should be performed on multiple items with the same tag.
<i>textOption</i>	Defines whether text items should be converted into paths when drawing.

Returns

An Avalonia.Controls.Canvas containing the rendered graphics objects.

Definition at line 1208 of file SKRenderContext.cs.

6.56.2.9 PaintToSKCanvas() [6/6]

```
static SKMultiLayerRenderCanvas VectSharp.Canvas.SKRenderContextInterpreter.PaintToSKCanvas (
    this Page page,
    Dictionary< string, Func< SKRenderAction, IEnumerable< SKRenderAction >>> taggedActions,
    Dictionary< string, (SKBitmap, bool)> images,
    bool removeTaggedActionsAfterExecution = true,
    AvaloniaContextInterpreter.TextOptions textOption = AvaloniaContextInterpreter.TextOptions.Convert
) [static]
```

Render a [Page](#) to an Avalonia.Controls.Canvas using the SkiaSharpRenderer.

Parameters

<i>page</i>	The Page to render.
<i>taggedActions</i>	A Dictionary containing the actions that will be performed on items with the corresponding tag. These should be functions that accept one parameter of type SKRenderAction and return an IEnumerable<SKRenderAction> of the render actions that will actually be added to the plot.
<i>images</i>	A dictionary that associates to each raster image path (or data URL) the image rendered as a SKBitmap and a boolean value indicating whether it should be drawn as "pixelated" or not. This will be populated automatically as the page is rendered. If you are rendering multiple Pages (or you are rendering the same page multiple times), it will be beneficial to keep a reference to this dictionary and pass it again on further rendering requests; otherwise, you can just pass an empty dictionary.
<i>removeTaggedActionsAfterExecution</i>	Whether the actions should be removed from <i>taggedActions</i> after their execution. Set to false if the same action should be performed on multiple items with the same tag.
<i>textOption</i>	Defines whether text items should be converted into paths when drawing.

Returns

An Avalonia.Controls.Canvas containing the rendered graphics objects.

Definition at line 1224 of file SKRenderContext.cs.

The documentation for this class was generated from the following file:

- VectSharp.Canvas/SKRenderContext.cs

6.57 VectSharp.SolidColourBrush Class Reference

Represents a brush painting with a single solid colour.

Inheritance diagram for VectSharp.SolidColourBrush:

Public Member Functions

- `SolidColourBrush` (`Colour` colour)
Creates a new `SolidColourBrush` with the specified colour .
- override `Brush MultiplyOpacity` (double opacity)
Returns a brush corresponding the current instance, with the specified opacity multiplication applied.

Static Public Member Functions

- static implicit `operator SolidColourBrush` (`Colour` colour)
Implicitly converts a `Colour` into a `SolidColourBrush`.

Public Attributes

- double `R` => `Colour.R`
Red component of the colour. Range: [0, 1].
- double `G` => `Colour.G`
Green component of the colour. Range: [0, 1].
- double `B` => `Colour.B`
Blue component of the colour. Range: [0, 1].
- double `A` => `Colour.A`
Alpha component of the colour. Range: [0, 1].

Properties

- `Colour Colour` [get]
The colour of the brush.

6.57.1 Detailed Description

Represents a brush painting with a single solid colour.

Definition at line 37 of file Brush.cs.

6.57.2 Constructor & Destructor Documentation

6.57.2.1 SolidColourBrush()

```
VectSharp.SolidColourBrush.SolidColourBrush (
    Colour colour )
```

Creates a new [SolidColourBrush](#) with the specified *colour*.

Parameters

<i>colour</i>	The Colour to use for the brush.
---------------	--

Definition at line 68 of file Brush.cs.

6.57.3 Member Function Documentation

6.57.3.1 operator SolidColourBrush()

```
static implicit VectSharp.SolidColourBrush.operator SolidColourBrush (
    Colour colour ) [static]
```

Implicitly converts a [Colour](#) into a [SolidColourBrush](#).

Parameters

<i>colour</i>	The Colour to use for the brush.
---------------	--

Definition at line 83 of file Brush.cs.

6.57.4 Member Data Documentation

6.57.4.1 A

```
double VectSharp.SolidColourBrush.A => Colour.A
```

Alpha component of the colour. Range: [0, 1].

Definition at line 62 of file Brush.cs.

6.57.4.2 B

```
double VectSharp.SolidColourBrush.B => Colour.B
```

Blue component of the colour. Range: [0, 1].

Definition at line 57 of file Brush.cs.

6.57.4.3 G

```
double VectSharp.SolidColourBrush.G => Colour.G
```

Green component of the colour. Range: [0, 1].

Definition at line 52 of file Brush.cs.

6.57.4.4 R

```
double VectSharp.SolidColourBrush.R => Colour.R
```

Red component of the colour. Range: [0, 1].

Definition at line 47 of file Brush.cs.

6.57.5 Property Documentation

6.57.5.1 Colour

```
Colour VectSharp.SolidColourBrush.Colour [get]
```

The colour of the brush.

Definition at line 42 of file Brush.cs.

The documentation for this class was generated from the following file:

- VectSharp/Brush.cs

6.58 VectSharp.ThreeD.SpotlightLightSource Class Reference

Represents a conic spotlight.

Inheritance diagram for VectSharp.ThreeD.SpotlightLightSource:

Public Member Functions

- [SpotlightLightSource](#) (double intensity, Point3D position, NormalizedVector3D direction, double beamWidth↔Angle, double cutoffAngle)
Creates a new [SpotlightLightSource](#) instance.
- [LightIntensity GetLightAt](#) (Point3D point)
Computes the light intensity at the specified point, without taking into account any obstructions.
- double [GetObstruction](#) (Point3D point, IEnumerable< Triangle3DElement > shadowingTriangles)
Determines the amount of obstruction of the light that results at point due to the specified shadowingTriangles .

Properties

- bool [CastsShadow](#) = true [get, set]
- Point3D [Position](#) [get, set]
The position of the light source.
- NormalizedVector3D [Direction](#) [get, set]
The direction of the cone axis.
- double [Intensity](#) [get, set]
The base intensity of the light.
- double [BeamWidthAngle](#) [get, set]
The angular size of the light cone, in radians.
- double [CutoffAngle](#) [get, set]
The angular size of the cutoff cone, in radians.
- double [DistanceAttenuationExponent](#) = 2 [get, set]
An exponent determining how fast the light attenuates with increasing distance. Set to 0 to disable distance attenuation.
- double [AngleAttenuationExponent](#) = 1 [get, set]
An exponent determining how fast the light attenuates between the main light cone and the cutoff cone.

6.58.1 Detailed Description

Represents a conic spotlight.

Definition at line 239 of file Lights.cs.

6.58.2 Constructor & Destructor Documentation

6.58.2.1 SpotlightLightSource()

```
VectSharp.ThreeD.SpotlightLightSource.SpotlightLightSource (
    double intensity,
    Point3D position,
    NormalizedVector3D direction,
    double beamWidthAngle,
    double cutoffAngle )
```

Creates a new [SpotlightLightSource](#) instance.

Parameters

<i>intensity</i>	The intensity of the light.
<i>position</i>	The position of the light source.
<i>direction</i>	The direction of the cone's axis.
<i>beamWidthAngle</i>	The angular size of the light cone, in radians.
<i>cutoffAngle</i>	The angular size of the cutoff cone, in radians.

Definition at line 287 of file Lights.cs.

6.58.3 Property Documentation

6.58.3.1 AngleAttenuationExponent

```
double VectSharp.ThreeD.SpotlightLightSource.AngleAttenuationExponent = 1 [get], [set]
```

An exponent determining how fast the light attenuates between the main light cone and the cutoff cone.

Definition at line 277 of file Lights.cs.

6.58.3.2 BeamWidthAngle

```
double VectSharp.ThreeD.SpotlightLightSource.BeamWidthAngle [get], [set]
```

The angular size of the light cone, in radians.

Definition at line 262 of file Lights.cs.

6.58.3.3 CutoffAngle

```
double VectSharp.ThreeD.SpotlightLightSource.CutoffAngle [get], [set]
```

The angular size of the cutoff cone, in radians.

Definition at line 267 of file Lights.cs.

6.58.3.4 Direction

```
NormalizedVector3D VectSharp.ThreeD.SpotlightLightSource.Direction [get], [set]
```

The direction of the cone axis.

Definition at line 252 of file Lights.cs.

6.58.3.5 DistanceAttenuationExponent

```
double VectSharp.ThreeD.SpotlightLightSource.DistanceAttenuationExponent = 2 [get], [set]
```

An exponent determining how fast the light attenuates with increasing distance. Set to 0 to disable distance attenuation.

Definition at line 272 of file Lights.cs.

6.58.3.6 Intensity

```
double VectSharp.ThreeD.SpotlightLightSource.Intensity [get], [set]
```

The base intensity of the light.

Definition at line 257 of file Lights.cs.

6.58.3.7 Position

```
Point3D VectSharp.ThreeD.SpotlightLightSource.Position [get], [set]
```

The position of the light source.

Definition at line 247 of file Lights.cs.

The documentation for this class was generated from the following file:

- VectSharp.ThreeD/Lights.cs

6.59 VectSharp.SVG.SVGContextInterpreter Class Reference

Contains methods to render a [Page](#) as an [SVG](#) file.

Public Types

- enum [TextOptions](#) { [TextOptions.EmbedFonts](#), [TextOptions.SubsetFonts](#), [TextOptions.ConvertIntoPaths](#), [TextOptions.DoNotEmbed](#) }

Defines whether the used fonts should be included in the file.

Static Public Member Functions

- static void [SaveAsSVG](#) (this [Page](#) page, string fileName, [TextOptions](#) textOption=[TextOptions.SubsetFonts](#), Dictionary< string, string > linkDestinations=null)
Render the page to an [SVG](#) file.
- static void [SaveAsSVG](#) (this [Page](#) page, Stream stream, [TextOptions](#) textOption=[TextOptions.SubsetFonts](#), Dictionary< string, string > linkDestinations=null)
Render the page to an [SVG](#) stream.

6.59.1 Detailed Description

Contains methods to render a [Page](#) as an [SVG](#) file.

Definition at line 1105 of file SVGContext.cs.

6.59.2 Member Enumeration Documentation

6.59.2.1 TextOptions

```
enum VectSharp.SVG.SVGContextInterpreter.TextOptions [strong]
```

Defines whether the used fonts should be included in the file.

Enumerator

EmbedFonts	Embeds the full font files.
SubsetFonts	Embeds subsetting font files containing only the glyphs for the characters that have been used.
ConvertIntoPaths	Does not embed any font file and converts all text items into paths.
DoNotEmbed	Does not embed any font file, but still encodes text items as such.

Definition at line 1126 of file SVGContext.cs.

6.59.3 Member Function Documentation

6.59.3.1 SaveAsSVG() [1/2]

```
static void VectSharp.SVG.SVGContextInterpreter.SaveAsSVG (
    this Page page,
    Stream stream,
    TextOptions textOption = TextOptions.SubsetFonts,
    Dictionary< string, string > linkDestinations = null ) [static]
```

Render the page to an SVG stream.

Parameters

<i>page</i>	The Page to render.
<i>stream</i>	The stream to which the SVG data will be written.
<i>textOption</i>	Defines whether the used fonts should be included in the file.
<i>linkDestinations</i>	A dictionary associating element tags to link targets. If this is provided, objects that have been drawn with a tag contained in the dictionary will become hyperlink to the destination specified in the dictionary. If the destination starts with a hash (#), it is interpreted as the tag of another object in the current document; otherwise, it is interpreted as an external URI.

Definition at line 1156 of file SVGContext.cs.

6.59.3.2 SaveAsSVG() [2/2]

```
static void VectSharp.SVG.SVGContextInterpreter.SaveAsSVG (
    this Page page,
    string fileName,
    TextOptions textOption = TextOptions.SubsetFonts,
    Dictionary< string, string > linkDestinations = null ) [static]
```

Render the page to an [SVG](#) file.

Parameters

<i>page</i>	The Page to render.
<i>fileName</i>	The full path to the file to save. If it exists, it will be overwritten.
<i>textOption</i>	Defines whether the used fonts should be included in the file.
<i>linkDestinations</i>	A dictionary associating element tags to link targets. If this is provided, objects that have been drawn with a tag contained in the dictionary will become hyperlink to the destination specified in the dictionary. If the destination starts with a hash (#), it is interpreted as the tag of another object in the current document; otherwise, it is interpreted as an external URI.

Definition at line 1115 of file SVGContext.cs.

The documentation for this class was generated from the following file:

- VectSharp.SVG/SVGContext.cs

6.60 VectSharp.Markdown.SyntaxHighlighter Class Reference

Contains methods to perform syntax highlighting.

Static Public Member Functions

- static List< List< [FormattedString](#) > > [GetSyntaxHighlightedLines](#) (string sourceCode, string language)
Performs syntax highlighting for a specified language on some source code.

6.60.1 Detailed Description

Contains methods to perform syntax highlighting.

Definition at line 56 of file SyntaxHighlighting.cs.

6.60.2 Member Function Documentation

6.60.2.1 GetSyntaxHighlightedLines()

```
static List<List<FormattedString> > VectSharp.Markdown.SyntaxHighlighter.GetSyntaxHighlightedLines (
    string sourceCode,
    string language ) [static]
```

Performs syntax highlighting for a specified language on some source code.

Parameters

<i>sourceCode</i>	The source code to be highlighted.
<i>language</i>	The name of the language to use for the highlighting.

Returns

A list of lists of [FormattedStrings](#). Each list of [FormattedStrings](#) represents a line.

Definition at line 112 of file SyntaxHighlighting.cs.

The documentation for this class was generated from the following file:

- VectSharp.Markdown/SyntaxHighlighting.cs

6.61 VectSharp.TrueTypeFile Class Reference

Represents a font file in TrueType format. Reference: <http://stevehanov.ca/blog/?id=143>, <https://developer.apple.com/fonts/TrueType-Reference-Manual/>, <https://docs.microsoft.com/en-us/typography/opentype/spec/>

Classes

- struct [Bearings](#)
Represents the left- and right-side bearings of a glyph.
- struct [TrueTypePoint](#)
Represents a point in a TrueType path description.
- struct [VerticalMetrics](#)
Represents the maximum height above and depth below the baseline of a glyph.

Public Member Functions

- void [Destroy](#) ()
Remove this TrueType file from the cache, clear the tables and release the [FontStream](#). Only call this when the actual file that was used to create this object needs to be changed!
- [TrueTypeFile SubsetFont](#) (string charactersToInclude, bool consolidateAt32=false, Dictionary< char, char > outputEncoding=null)
Create a subset of the TrueType file, containing only the glyphs for the specified characters.
- string [GetFontFamilyName](#) ()
Obtains the font family name from the TrueType file.
- string [GetFontName](#) ()
Obtains the PostScript font name from the TrueType file.
- ushort [GetFirstCharIndex](#) ()
Returns the index of the first character glyph represented by the font.
- ushort [GetLastCharIndex](#) ()
Returns the index of the last character glyph represented by the font.
- bool [IsItalic](#) ()

- Determines whether the typeface is Italic or Oblique or not.*

 - bool [IsOblique](#) ()
- Determines whether the typeface is Oblique or not.*

 - bool [IsBold](#) ()
- Determines whether the typeface is Bold or not.*

 - bool [IsFixedPitch](#) ()
- Determines whether the typeface is fixed-pitch (aka monospaces) or not.*

 - bool [IsSerif](#) ()
- Determines whether the typeface is serified or not.*

 - bool [IsScript](#) ()
- Determines whether the typeface is a script typeface or not.*

 - int [GetGlyphIndex](#) (char glyph)
- Determines the index of the glyph corresponding to a certain character.*

 - [TrueTypePoint](#)[][] [GetGlyphPath](#) (int glyphIndex, double size)
- Get the path that describes the shape of a glyph.*

 - [TrueTypePoint](#)[][] [GetGlyphPath](#) (char glyph, double size)
- Get the path that describes the shape of a glyph.*

 - double [Get1000EmGlyphWidth](#) (char glyph)
- Computes the advance width of a glyph, in thousandths of em unit.*

 - double [Get1000EmGlyphWidth](#) (int glyphIndex)
- Computes the advance width of a glyph, in thousandths of em unit.*

 - double [Get1000EmAscent](#) ()
- Computes the font ascent, in thousandths of em unit.*

 - double [Get1000EmDescent](#) ()
- Computes the font descent, in thousandths of em unit.*

 - double [Get1000EmYMax](#) ()
- Computes the maximum height over the baseline of the font, in thousandths of em unit.*

 - double [Get1000EmYMin](#) ()
- Computes the maximum depth below the baseline of the font, in thousandths of em unit.*

 - double [Get1000EmXMax](#) ()
- Computes the maximum distance to the right of the glyph origin of the font, in thousandths of em unit.*

 - double [Get1000EmXMin](#) ()
- Computes the maximum distance to the left of the glyph origin of the font, in thousandths of em unit.*

 - [Bearings](#) [Get1000EmGlyphBearings](#) (char glyph)
- Computes the left- and right- side bearings of a glyph, in thousandths of em unit.*

 - [VerticalMetrics](#) [Get1000EmGlyphVerticalMetrics](#) (char glyph)
- Computes the vertical metrics of a glyph, in thousandths of em unit.*

Properties

- Stream [FontStream](#) [get]

A stream pointing to the TrueType file source (either on disk or in memory). Never dispose this stream directly; if you really need to, call [Destroy](#) instead.

6.61.1 Detailed Description

Represents a font file in TrueType format. Reference: <http://stevehanov.ca/blog/?id=143>, <https://developer.apple.com/fonts/TrueType-Reference-Manual/>, <https://docs.microsoft.com/en-us/typography/opentype/spec/>

Definition at line 30 of file TrueType.cs.

6.61.2 Member Function Documentation

6.61.2.1 Destroy()

```
void VectSharp.TrueTypeFile.Destroy ( )
```

Remove this TrueType file from the cache, clear the tables and release the [FontStream](#). Only call this when the actual file that was used to create this object needs to be changed!

Definition at line 53 of file TrueType.cs.

6.61.2.2 Get1000EmAscent()

```
double VectSharp.TrueTypeFile.Get1000EmAscent ( )
```

Computes the font ascent, in thousandths of em unit.

Returns

The font ascent in thousandths of em unit.

Definition at line 2073 of file TrueType.cs.

6.61.2.3 Get1000EmDescent()

```
double VectSharp.TrueTypeFile.Get1000EmDescent ( )
```

Computes the font descent, in thousandths of em unit.

Returns

The font descent in thousandths of em unit.

Definition at line 2083 of file TrueType.cs.

6.61.2.4 Get1000EmGlyphBearings()

```
Bearings VectSharp.TrueTypeFile.Get1000EmGlyphBearings (
    char glyph )
```

Computes the left- and right- side bearings of a glyph, in thousandths of em unit.

Parameters

<i>glyph</i>	The glyph whose bearings are to be computed.
--------------	--

Returns

The left- and right- side bearings of the glyph in thousandths of em unit

Definition at line 2165 of file TrueType.cs.

6.61.2.5 Get1000EmGlyphVerticalMetrics()

```
VerticalMetrics VectSharp.TrueTypeFile.Get1000EmGlyphVerticalMetrics (
    char glyph )
```

Computes the vertical metrics of a glyph, in thousandths of em unit.

Parameters

<i>glyph</i>	The glyph whose vertical metrics are to be computed.
--------------	--

Returns

The vertical metrics of a glyph, in thousandths of em unit.

Definition at line 2213 of file TrueType.cs.

6.61.2.6 Get1000EmGlyphWidth() [1/2]

```
double VectSharp.TrueTypeFile.Get1000EmGlyphWidth (
    char glyph )
```

Computes the advance width of a glyph, in thousandths of em unit.

Parameters

<i>glyph</i>	The glyph whose advance width is to be computed.
--------------	--

Returns

The advance width of the glyph in thousandths of em unit.

Definition at line 2044 of file TrueType.cs.

6.61.2.7 Get1000EmGlyphWidth() [2/2]

```
double VectSharp.TrueTypeFile.Get1000EmGlyphWidth (
    int glyphIndex )
```

Computes the advance width of a glyph, in thousandths of em unit.

Parameters

<i>glyphIndex</i>	The index of the glyph whose advance width is to be computed.
-------------------	---

Returns

The advance width of the glyph in thousandths of em unit.

Definition at line 2062 of file TrueType.cs.

6.61.2.8 Get1000EmXMax()

```
double VectSharp.TrueTypeFile.Get1000EmXMax ( )
```

Computes the maximum distance to the right of the glyph origin of the font, in thousandths of em unit.

Returns

The maximum distance to the right of the glyph origin of the font in thousandths of em unit.

Definition at line 2110 of file TrueType.cs.

6.61.2.9 Get1000EmXMin()

```
double VectSharp.TrueTypeFile.Get1000EmXMin ( )
```

Computes the maximum distance to the left of the glyph origin of the font, in thousandths of em unit.

Returns

The maximum distance to the left of the glyph origin of the font in thousandths of em unit.

Definition at line 2119 of file TrueType.cs.

6.61.2.10 Get1000EmYMax()

```
double VectSharp.TrueTypeFile.Get1000EmYMax ( )
```

Computes the maximum height over the baseline of the font, in thousandths of em unit.

Returns

The maximum height over the baseline of the font in thousandths of em unit.

Definition at line 2092 of file TrueType.cs.

6.61.2.11 Get1000EmYMin()

```
double VectSharp.TrueTypeFile.Get1000EmYMin ( )
```

Computes the maximum depth below the baseline of the font, in thousandths of em unit.

Returns

The maximum depth below the baseline of the font in thousandths of em unit.

Definition at line 2101 of file TrueType.cs.

6.61.2.12 GetFirstCharIndex()

```
ushort VectSharp.TrueTypeFile.GetFirstCharIndex ( )
```

Returns the index of the first character glyph represented by the font.

Returns

The index of the first character glyph represented by the font.

Definition at line 1882 of file TrueType.cs.

6.61.2.13 GetFontFamilyName()

```
string VectSharp.TrueTypeFile.GetFontFamilyName ( )
```

Obtains the font family name from the TrueType file.

Returns

The font family name, if available; `null` otherwise.

Definition at line 1835 of file TrueType.cs.

6.61.2.14 GetFontName()

```
string VectSharp.TrueTypeFile.GetFontName ( )
```

Obtains the PostScript font name from the TrueType file.

Returns

The PostScript font name, if available; `null` otherwise.

Definition at line 1863 of file TrueType.cs.

6.61.2.15 GetGlyphIndex()

```
int VectSharp.TrueTypeFile.GetGlyphIndex (
    char glyph )
```

Determines the index of the glyph corresponding to a certain character.

Parameters

<i>glyph</i>	The character whose glyph is sought.
--------------	--------------------------------------

Returns

The index of the glyph in the TrueType file.

Definition at line 1972 of file TrueType.cs.

6.61.2.16 GetGlyphPath() [1/2]

```
TrueTypePoint [][] VectSharp.TrueTypeFile.GetGlyphPath (
    char glyph,
    double size )
```

Get the path that describes the shape of a glyph.

Parameters

<i>glyph</i>	The glyph whose path is sought.
<i>size</i>	The font size to be used for the font coordinates.

Returns

An array of contours, each of which is itself an array of TrueType points.

Definition at line 2034 of file TrueType.cs.

6.61.2.17 GetGlyphPath() [2/2]

```
TrueTypePoint [][] VectSharp.TrueTypeFile.GetGlyphPath (
    int glyphIndex,
    double size )
```

Get the path that describes the shape of a glyph.

Parameters

<i>glyphIndex</i>	The index of the glyph whose path is sought.
<i>size</i>	The font size to be used for the font coordinates.

Returns

An array of contours, each of which is itself an array of TrueType points.

Definition at line 2023 of file TrueType.cs.

6.61.2.18 GetLastCharIndex()

```
ushort VectSharp.TrueTypeFile.GetLastCharIndex ( )
```

Returns the index of the last character glyph represented by the font.

Returns

The index of the last character glyph represented by the font.

Definition at line 1893 of file TrueType.cs.

6.61.2.19 IsBold()

```
bool VectSharp.TrueTypeFile.IsBold ( )
```

Determines whether the typeface is Bold or not.

Returns

A bool indicating whether the typeface is Bold or not

Definition at line 1927 of file TrueType.cs.

6.61.2.20 IsFixedPitch()

```
bool VectSharp.TrueTypeFile.IsFixedPitch ( )
```

Determines whether the typeface is fixed-pitch (aka monospaces) or not.

Returns

A bool indicating whether the typeface is fixed-pitch (aka monospaces) or not.

Definition at line 1938 of file TrueType.cs.

6.61.2.21 IsItalic()

```
bool VectSharp.TrueTypeFile.IsItalic ( )
```

Determines whether the typeface is Italic or Oblique or not.

Returns

A bool indicating whether the typeface is Italic or Oblique or not.

Definition at line 1905 of file TrueType.cs.

6.61.2.22 IsOblique()

```
bool VectSharp.TrueTypeFile.IsOblique ( )
```

Determines whether the typeface is Oblique or not.

Returns

A bool indicating whether the typeface is Oblique or not.

Definition at line 1916 of file TrueType.cs.

6.61.2.23 IsScript()

```
bool VectSharp.TrueTypeFile.IsScript ( )
```

Determines whether the typeface is a script typeface or not.

Returns

A bool indicating whether the typeface is a script typeface or not.

Definition at line 1960 of file TrueType.cs.

6.61.2.24 IsSerif()

```
bool VectSharp.TrueTypeFile.IsSerif ( )
```

Determines whether the typeface is serified or not.

Returns

A bool indicating whether the typeface is serified or not.

Definition at line 1949 of file TrueType.cs.

6.61.2.25 SubsetFont()

```
TrueTypeFile VectSharp.TrueTypeFile.SubsetFont (
    string charactersToInclude,
    bool consolidateAt32 = false,
    Dictionary< char, char > outputEncoding = null )
```

Create a subset of the TrueType file, containing only the glyphs for the specified characters.

Parameters

<i>charactersToInclude</i>	A string containing the characters for which the glyphs should be included.
<i>consolidateAt32</i>	If true, the character map is rearranged so that the included glyphs start at the unicode U+0032 control point.
<i>outputEncoding</i>	If <i>consolidateAt32</i> is true, entries will be added to this dictionary mapping the original characters to the new map (that starts at U+0033).

Returns

Definition at line 556 of file TrueType.cs.

6.61.3 Property Documentation

6.61.3.1 FontStream

```
Stream VectSharp.TrueTypeFile.FontStream [get]
```

A stream pointing to the TrueType file source (either on disk or in memory). Never dispose this stream directly; if you really need to, call [Destroy](#) instead.

Definition at line 47 of file TrueType.cs.

The documentation for this class was generated from the following file:

- VectSharp/TrueType.cs

6.62 VectSharp.TrueTypeFile.TrueTypePoint Struct Reference

Represents a point in a TrueType path description.

Public Attributes

- double [X](#)
The horizontal coordinate of the point.
- double [Y](#)
The vertical coordinate of the point.
- bool [IsOnCurve](#)
Whether the point is a point on the curve, or a control point of a quadratic Bezier curve.

6.62.1 Detailed Description

Represents a point in a TrueType path description.

Definition at line 1349 of file TrueType.cs.

6.62.2 Member Data Documentation

6.62.2.1 IsOnCurve

```
bool VectSharp.TrueTypeFile.TrueTypePoint.IsOnCurve
```

Whether the point is a point on the curve, or a control point of a quadratic Bezier curve.

Definition at line 1364 of file TrueType.cs.

6.62.2.2 X

```
double VectSharp.TrueTypeFile.TrueTypePoint.X
```

The horizontal coordinate of the point.

Definition at line 1354 of file TrueType.cs.

6.62.2.3 Y

```
double VectSharp.TrueTypeFile.TrueTypePoint.Y
```

The vertical coordinate of the point.

Definition at line 1359 of file TrueType.cs.

The documentation for this struct was generated from the following file:

- VectSharp/TrueType.cs

6.63 VectSharp.UnbalancedStackException Class Reference

The exception that is thrown when an unbalanced graphics state stack occurs.

Inheritance diagram for VectSharp.UnbalancedStackException:

6.63.1 Detailed Description

The exception that is thrown when an unbalanced graphics state stack occurs.

Definition at line 245 of file Graphics.cs.

The documentation for this class was generated from the following file:

- VectSharp/Graphics.cs

6.64 VectSharp.TrueTypeFile.VerticalMetrics Struct Reference

Represents the maximum height above and depth below the baseline of a glyph.

Public Attributes

- int [YMin](#)
The maximum depth below the baseline of the glyph.
- int [YMax](#)
The maximum height above the baseline of the glyph.

6.64.1 Detailed Description

Represents the maximum height above and depth below the baseline of a glyph.

Definition at line 2182 of file TrueType.cs.

6.64.2 Member Data Documentation

6.64.2.1 YMax

```
int VectSharp.TrueTypeFile.VerticalMetrics.YMax
```

The maximum height above the baseline of the glyph.

Definition at line 2192 of file TrueType.cs.

6.64.2.2 YMin

```
int VectSharp.TrueTypeFile.VerticalMetrics.YMin
```

The maximum depth below the baseline of the glyph.

Definition at line 2187 of file TrueType.cs.
