VectSharp 1.7.0

Generated by Doxygen 1.8.18

1 VectSharp: a light library for C# vector graphics	1
1.1 Introduction	1
1.2 Installing VectSharp	1
1.3 Usage	2
1.4 Creating new output layers	3
1.5 Compiling VectSharp from source	3
1.5.1 Windows	3
1.5.2 macOS and Linux	3
1.6 Note about VectSharp.MuPDFUtils and .NET Framework	4
2 Namespace Index	5
2.1 Packages	5
3 Hierarchical Index	7
3.1 Class Hierarchy	7
4 Class Index	9
4.1 Class List	9
5 Namespace Documentation	13
5.1 VectSharp Namespace Reference	13
5.1.1 Enumeration Type Documentation	14
5.1.1.1 LineCaps	14
5.1.1.2 LineJoins	15
5.1.1.3 PixelFormats	15
5.1.1.4 SegmentType	15
5.1.1.5 TextAnchors	16
5.1.1.6 TextBaselines	16
5.1.1.7 UnbalancedStackActions	16
5.2 VectSharp.Canvas Namespace Reference	17
5.3 VectSharp.Markdown Namespace Reference	17
5.4 VectSharp.MuPDFUtils Namespace Reference	17
5.5 VectSharp.PDF Namespace Reference	17
5.6 VectSharp.Raster Namespace Reference	18
5.7 VectSharp.SVG Namespace Reference	18
5.8 VectSharp.ThreeD Namespace Reference	18
6 Class Documentation	19
6.1 VectSharp.ThreeD.AmbientLightSource Class Reference	19
6.1.1 Detailed Description	20
6.1.2 Constructor & Destructor Documentation	20
6.1.2.1 AmbientLightSource()	20
6.1.3 Property Documentation	20
6.1.3.1 Intensity	20

6.2 VectSharp.ThreeD.AreaLightSource Class Reference	21
6.2.1 Detailed Description	22
6.2.2 Constructor & Destructor Documentation	22
6.2.2.1 AreaLightSource()	22
6.2.3 Property Documentation	22
6.2.3.1 Center	22
6.2.3.2 Direction	23
6.2.3.3 DistanceAttenuationExponent	23
6.2.3.4 Intensity	23
6.2.3.5 PenumbraAttenuationExponent	23
6.2.3.6 PenumbraRadius	23
6.2.3.7 Radius	24
6.2.3.8 ShadowSamplingPointCount	24
6.2.3.9 SourceDistance	24
6.3 VectSharp.Canvas.AvaloniaContextInterpreter Class Reference	24
6.3.1 Detailed Description	25
6.3.2 Member Enumeration Documentation	25
6.3.2.1 TextOptions	25
6.3.3 Member Function Documentation	25
6.3.3.1 PaintToCanvas() [1/4]	25
6.3.3.2 PaintToCanvas() [2/4]	26
6.3.3.3 PaintToCanvas() [3/4]	27
6.3.3.4 PaintToCanvas() [4/4]	27
6.4 VectSharp.TrueTypeFile.Bearings Struct Reference	28
6.4.1 Detailed Description	28
6.4.2 Member Data Documentation	28
6.4.2.1 LeftSideBearing	28
6.4.2.2 RightSideBearing	29
6.5 VectSharp.Colour Struct Reference	29
6.5.1 Detailed Description	31
6.5.2 Member Function Documentation	31
6.5.2.1 FromCSSString()	31
6.5.2.2 FromHSL()	31
6.5.2.3 FromLab()	32
6.5.2.4 FromRgb() [1/3]	32
6.5.2.5 FromRgb() [2/3]	33
6.5.2.6 FromRgb() [3/3]	33
6.5.2.7 FromRgba() [1/6]	34
6.5.2.8 FromRgba() [2/6]	34
6.5.2.9 FromRgba() [3/6]	34
6.5.2.10 FromRgba() [4/6]	35
6.5.2.11 FromRgba() [5/6]	35

6.5.2.12 FromHgba() [6/6]	 . 36
6.5.2.13 FromXYZ()	 . 36
6.5.2.14 ToCSSString()	 . 37
6.5.2.15 WithAlpha() [1/4]	 . 37
6.5.2.16 WithAlpha() [2/4]	 . 38
6.5.2.17 WithAlpha() [3/4]	 . 38
6.5.2.18 WithAlpha() [4/4]	 . 39
6.5.3 Member Data Documentation	 . 39
6.5.3.1 A	 . 39
6.5.3.2 B	 . 39
6.5.3.3 G	 . 40
6.5.3.4 H	 . 40
6.5.3.5 L	 . 40
6.5.3.6 R	 . 40
6.5.3.7 X	 . 41
6.6 VectSharp.ThreeD.ColourMaterial Class Reference	 . 41
6.6.1 Detailed Description	 . 42
6.6.2 Constructor & Destructor Documentation	 . 42
6.6.2.1 ColourMaterial()	 . 42
6.6.3 Property Documentation	 . 42
6.6.3.1 Colour	 . 42
6.7 VectSharp.Colours Class Reference	 . 42
6.7.1 Detailed Description	 . 48
6.7.2 Member Data Documentation	 . 49
6.7.2.1 AliceBlue	 . 49
6.7.2.2 AntiqueWhite	 . 49
6.7.2.3 Aqua	 . 49
6.7.2.4 Aquamarine	 . 49
6.7.2.5 Azure	 . 49
6.7.2.6 Beige	 . 50
6.7.2.7 Bisque	 . 50
6.7.2.8 Black	 . 50
6.7.2.9 BlanchedAlmond	 . 50
6.7.2.10 Blue	 . 50
6.7.2.11 BlueViolet	 . 51
6.7.2.12 Brown	 . 51
6.7.2.13 BurlyWood	 . 51
6.7.2.14 CadetBlue	 . 51
6.7.2.15 Chartreuse	 . 51
6.7.2.16 Chocolate	 . 52
6.7.2.17 Coral	 . 52
6.7.2.18 CornflowerBlue	 . 52

6.7.2.19 Cornsilk
6.7.2.20 Crimson
6.7.2.21 Cyan
6.7.2.22 DarkBlue
6.7.2.23 DarkCyan
6.7.2.24 DarkGoldenRod
6.7.2.25 DarkGray

VectSharp: a light library for C# vector graphics

1.1 Introduction

VectSharp is a library to create vector graphics (including text) in C#, without too many dependencies.

It includes an abstract layer on top of which output layers can be written. Currently, there are four available output layers: VectSharp.PDF produces PDF documents, VectSharp.Canvas produces an Avalonia. \leftarrow Controls.Canvas object (https://avaloniaui.net/docs/controls/canvas) containing the rendered graphics objects, VectSharp.Raster produces raster images in PNG format, and VectSharp.SVG produces vector graphics in SVG format.

VectSharp. ThreeD adds support for 3D vector and raster graphics.

VectSharp. Markdown can be used to transform Markdown documents into VectSharp objects, that can then be exported e.g. as PDF or SVG files, or displayed in an Avalonia Canvas.

VectSharp is written using .NET Core, and is available for Mac, Windows and Linux. It is released under a GPLv3 license. It includes 14 standard fonts, also released under a GPL license.

Since version 2.0.0, VectSharp.Raster is released under an AGPLv3 license.

VectSharp.MuPDFUtils, also released under an AGPLv3 license, contains some utility functions that use MuP← DFCore to make it possible to include in VectSharp graphics images in various formats.

1.2 Installing VectSharp

To include VectSharp in your project, you will need one of the output layer NuGet packages: VectSharp.PDF, VectSharp.Canvas, VectSharp.Raster, or VectSharp.SVG. You will need VectSharp.← ThreeD to work with 3D graphics. You may want the VectSharp.MuPDFUtils package if you wish to manipulate raster images.

1.3 **Usage**

You can find the full documentation for the VectSharp library at the documentation website. A PDF reference manual is also available.

In general, working with VectSharp involves: creating a Document, adding Pages, drawing to the Pages' Graphics objects and, finally, exporting them to a PDF document, Canvas, PNG image or SVG document.

```
• Create a Document:
   using VectSharp;
  Document doc = new Document();

    Add a Page:

   doc.Pages.Add(new Page(1000, 1000));
• Draw to the Page's Graphics object:
   Graphics gpr = doc.Pages.Last().Graphics;
   gpr.FillRectangle(100, 100, 800, 800, Colour.FromRgb(128, 128, 128));

    Save as PDF document:

   using VectSharp.PDF;
   doc.SaveAsPDF(@"Sample.pdf");

    Export the graphics to a Canvas:

   using VectSharp.Canvas;
   Avalonia.Controls.Canvas can = doc.Pages.Last().PaintToCanvas();
· Save as a PNG image:
   using VectSharp.Raster;
   doc.Pages.Last().SaveAsPNG(@"Sample.png");
· Save as an SVG document:
   using VectSharp.SVG;
   doc.Pages.Last().SaveAsSVG(@"Sample.svg");

    PDF and SVG documents support both internal and external links:

  using VectSharp;
using VectSharp.PDF;
   using VectSharp.SVG;
   Document document = new Document();
   Page page = new Page(1000, 1000);
  document.Pages.Add(page);
page.Graphics.FillRectangle(100, 100, 800, 50, Colour.FromRgb(128, 128, 128), tag: "linkToGitHub");
page.Graphics.FillRectangle(100, 300, 800, 50, Colour.FromRgb(255, 0, 0), tag: "linkToBlueRectangle");
page.Graphics.FillRectangle(100, 850, 800, 50, Colour.FromRgb(0, 0, 255), tag: "blueRectangle");
Dictionary<string, string> links = new Dictionary<string, string>() { "linkToGitHub",
    "https://github.com/" }, "linkToBlueRectangle", "#blueRectangle" };
page.SaveAsSVG(@"Links.svg", linkDestinations: links);
document.PageAsDF1(@"Links.Spff(" linkPostinations: links);
   document.Pages.Add(page);
```

This code produces a document with three rectangles: the grey one at the top links to the GitHub home page, while the red one in the middle is a hyperlink to the blue one at the bottom. Links in PDF documents can refer to objects that are in a different page than the one containing the link.

document.SaveAsPDF(@"Links.pdf", linkDestinations: links);

The public classes and methods are fully documented, and you can find a (much) more detailed code example in MainWindow.xaml.cs. A detailed guide about 3D graphics in VectSharp.ThreeD is available in the VectSharp.ThreeD folder.

1.4 Creating new output layers

VectSharp can be easily extended to provide additional output layers. To do so:

- 1. Create a new class implementing the <code>IGraphicsContext</code> interface.
- 2. Provide an extension method to either the Page or Document types.
- 3. Somewhere in the extension method, call the CopyToIGraphicsContext method on the Graphics object of the Pages.
- 4. Opportunely save or return the rendered result.

1.5 Compiling VectSharp from source

The VectSharp source code includes an example project (VectSharp.Demo) presenting how VectSharp can be used to produce graphics.

To be able to compile VectSharp from source, you will need to install the latest .NET SDK for your operating system.

You can use Microsoft Visual Studio to compile the program. The following instructions will cover compiling VectSharp from the command line, instead.

First of all, you will need to download the VectSharp source code: VectSharp.tar.gz and extract it somewhere.

1.5.1 Windows

Open a command-line window in the folder where you have extracted the source code, and type:

```
BuildDemo <Target>
```

Where <Target> can be one of Win-x64, Linux-x64 or Mac-x64 depending on which platform you wish to generate executables for.

In the Release folder and in the appropriate subfolder for the target platform you selected, you will find the compiled program.

1.5.2 macOS and Linux

Open a terminal in the folder where you have extracted the source code, and type:

```
./BuildDemo.sh <Target>
```

Where <Target> can be one of Win-x64, Linux-x64 or Mac-x64 depending on which platform you wish to generate executables for.

In the Release folder and in the appropriate subfolder for the target platform you selected, you will find the compiled program.

If you receive an error about permissions being denied, try typing chmod +x BuildDemo.sh first.

1.6 Note about VectSharp.MuPDFUtils and .NET Framework

If you wish to use VectSharp.MuPDFUtils in a .NET Framework project, you will need to manually copy the native MuPDFWrapper library for the platform you are using to the executable directory (this is done automatically if you target .NET core).

One way to obtain the appropriate library files is:

- 1. Manually download the NuGet package for MuPFDCore (click on the "Download package" link on the right).
- 2. Rename the .nupkg file so that it has a .zip extension.
- 3. Extract the zip file.
- 4. Within the extracted folder, the library files are in the runtimes/xxx-x64/native/ folder, where xxx is either linux, osx or win, depending on the platform you are using.

Make sure you copy the appropriate file to the same folder as the executable!

4.1 Class List

VectSharp.SVG.SVGContextInterpreter
Contains methods to render a Page as an SVG file
VectSharp.Markdown.SyntaxHighlighter
Contains methods to perform syntax highlighting
VectSharp.TrueTypeFile
Represents a font file in TrueType format. Reference: http://stevehanov.← ca/blog/?id=143, https://developer.apple.com/fonts/TrueType-←
Reference-Manual/, https://docs.microsoft.com/en-us/typography/opentype/spec
VectSharp.TrueTypeFile.TrueTypePoint
Represents a point in a TrueType path description
VectSharp.UnbalancedStackException
The exception that is thrown when an unbalanced graphics state stack occurs
VectSharp.TrueTypeFile.VerticalMetrics
Represents the maximum heigth above and depth below the baseline of a glyph

12 Class Index

Namespace Documentation

5.1 VectSharp Namespace Reference

Classes

• struct Colour

Represents an RGB colour.

· class Colours

Standard colours.

· class DisposableIntPtr

An IDisposable wrapper around an IntPtr that frees the allocated memory when it is disposed.

class Document

Represents a collection of pages.

· class Font

Represents a typeface with a specific size.

class FontFamily

Represents a typeface.

· class Graphics

Represents an abstract drawing surface.

class GraphicsPath

Represents a graphics path that can be filled or stroked.

• interface IGraphicsContext

This interface should be implemented by classes intended to provide graphics output capability to a Graphics object.

struct LineDash

Represents instructions on how to paint a dashed line.

class Page

Represents a Graphics object with a width and height.

struct Point

Represents a point relative to an origin in the top-left corner.

class RasterImage

Represents a raster image, created from raw pixel data. Consider using the derived classes included in the NuGet package "VectSharp.MuPDFUtils" if you need to load a raster image from a file or a Stream.

· class Segment

Represents a segment as part of a GraphicsPath.

• struct Size

Represents the size of an object.

class TrueTypeFile

Represents a font file in TrueType format. Reference: http://stevehanov.ca/blog/?id=143, https://developer.apple.com/fonts/TrueType-Reference-Manual/, https://docs. \leftarrow microsoft.com/en-us/typography/opentype/spec/

· class UnbalancedStackException

The exception that is thrown when an unbalanced graphics state stack occurs.

Enumerations

enum TextBaselines { TextBaselines.Top, TextBaselines.Bottom, TextBaselines.Middle, TextBaselines.Baseline
 }

Represent text baselines.

enum TextAnchors { TextAnchors.Left, TextAnchors.Center, TextAnchors.Right }

Represents text anchors.

enum LineCaps { LineCaps.Butt = 0, LineCaps.Round = 1, LineCaps.Square = 2 }

Represents line caps.

• enum LineJoins { LineJoins.Bevel = 2, LineJoins.Miter = 0, LineJoins.Round = 1 }

Represents line joining options.

enum SegmentType {
 SegmentType.Move, SegmentType.Line, SegmentType.CubicBezier, SegmentType.Arc,
 SegmentType.Close }

Types of Segment.

 enum UnbalancedStackActions { UnbalancedStackActions.Throw, UnbalancedStackActions.SilentlyFix, UnbalancedStackActions.Ignore }

Represents ways to deal with unbalanced graphics state stacks.

enum PixelFormats { PixelFormats.RGB, PixelFormats.BGR, PixelFormats.BGR, PixelFormats.BGRA }
 Represents the pixel format of a raster image.

5.1.1 Enumeration Type Documentation

5.1.1.1 LineCaps

```
enum VectSharp.LineCaps [strong]
```

Represents line caps.

Enumerator

Butt	The ends of the line are squared off at the endpoints.
Round	The ends of the lines are rounded.
Square	The ends of the lines are squared off by adding an half square box at each end.

Definition at line 88 of file Graphics.cs.

5.1.1.2 LineJoins

enum VectSharp.LineJoins [strong]

Represents line joining options.

Enumerator

Bevel	Consecutive segments are joined by straight corners.
Miter	Consecutive segments are joined by extending their outside edges until they meet.
Round	Consecutive segments are joined by arc segments.

Definition at line 109 of file Graphics.cs.

5.1.1.3 PixelFormats

enum VectSharp.PixelFormats [strong]

Represents the pixel format of a raster image.

Enumerator

RGB	RGB 24bpp format.
RGBA	RGBA 32bpp format.
BGR	BGR 24bpp format.
BGRA	BGR 32bpp format.

Definition at line 27 of file RasterImage.cs.

5.1.1.4 SegmentType

enum VectSharp.SegmentType [strong]

Types of Segment.

Enumerator

	,
Move	The segment represents a move from the current point to a new point.
Line	The segment represents a straight line from the current point to a new point.
CubicBezier	The segment represents a cubic bezier curve from the current point to a new point.
Arc	The segment represents a circular arc from the current point to a new point.
Close	The segment represents the closing segment of a figure.

Definition at line 1312 of file Graphics.cs.

5.1.1.5 TextAnchors

enum VectSharp.TextAnchors [strong]

Represents text anchors.

Enumerator

Left	The current coordinate will determine the position of the left side of the text string.
Center	The current coordinate will determine the position of the center of the text string.
Right	The current coordinate will determine the position of the right side of the text string.

Definition at line 67 of file Graphics.cs.

5.1.1.6 TextBaselines

enum VectSharp.TextBaselines [strong]

Represent text baselines.

Enumerator

Тор	The current vertical coordinate determines where the top of the text string will be placed.
Bottom	The current vertical coordinate determines where the bottom of the text string will be placed.
Middle	The current vertical coordinate determines where the middle of the text string will be placed.
Baseline	The current vertical coordinate determines where the baseline of the text string will be placed.

Definition at line 41 of file Graphics.cs.

5.1.1.7 UnbalancedStackActions

enum VectSharp.UnbalancedStackActions [strong]

Represents ways to deal with unbalanced graphics state stacks.

Enumerator

Throw	If the graphics state stack is unbalanced, an exception will be thrown.
SilentlyFix	The graphics state stack will be automatically balanced by adding or removing calls to Graphics.Restore as necessary.
Ignore	No attempt will be made at correcting an unbalanced graphics state stack. This may cause issues with some consumers.

Definition at line 2292 of file Graphics.cs.

5.2 VectSharp.Canvas Namespace Reference

Classes

· class AvaloniaContextInterpreter

Contains methods to render a Page to an Avalonia. Controls. Canvas.

· class RenderAction

Represents a light-weight rendering action.

· class ResourceFontFamily

Represents a FontFamily created from a resource stream.

5.3 VectSharp.Markdown Namespace Reference

Classes

struct FormattedString

Represents a string with associated formatting information.

class HTTPUtils

Contains utilities to resolve absolute and relative URIs.

class Margins

Represents the margins of a page.

• class MarkdownRenderer

Renders Markdown documents into VectSharp graphics objects.

class SyntaxHighlighter

Contains methods to perform syntax highlighting.

5.4 VectSharp.MuPDFUtils Namespace Reference

Classes

· class ImageURIParser

Provides a method to parse an image URI into a page.

class RasterImageFile

A RasterImage created from a file.

· class RasterImageStream

A RasterImage created from a stream.

5.5 VectSharp.PDF Namespace Reference

Classes

· class PDFContextInterpreter

Contains methods to render a Document as a PDF document.

5.6 VectSharp.Raster Namespace Reference

Classes

class Raster

Contains methods to render a page to a PNG image.

5.7 VectSharp.SVG Namespace Reference

Classes

class Parser

Contains methods to read an SVG image file.

class SVGContextInterpreter

Contains methods to render a Page as an SVG file.

5.8 VectSharp.ThreeD Namespace Reference

Classes

· class AmbientLightSource

Represents a uniform ambien light source.

· class AreaLightSource

Represents a light source emitting light from a circular area.

· class ColourMaterial

Represents a material that always has the same colour, regardless of light.

• interface ILightSource

Represents a light source.

interface IMaterial

Represents a material used to the determine the appearance of Triangle3DElement.

• interface IScene

Represents a 3D scene.

· struct LightIntensity

Represents the intensity of a light source at a particular point.

· class MaskedLightSource

Represents a point light source with a stencil in front of it.

· class ObjectFactory

A static class containing methods to create complex 3D objects.

class ParallelLightSource

Represents a parallel light source.

· class PhongMaterial

Represents a material that uses a Phong reflection model to determine the colour of the material based on the light sources that hit it.

· class PointLightSource

Represents a point light source.

• class Scene

Represents a 3D scene.

· class SpotlightLightSource

Represents a conic spotlight.

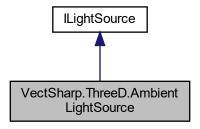

Chapter 6

Class Documentation

6.1 VectSharp.ThreeD.AmbientLightSource Class Reference

Represents a uniform ambien light source.

Inheritance diagram for VectSharp.ThreeD.AmbientLightSource:

Public Member Functions

- AmbientLightSource (double intensity)
 - Creates a new AmbientLightSource instance.
- LightIntensity GetLightAt (Point3D point)
 - Computes the light intensity at the specified point, without taking into account any obstructions.
- double GetObstruction (Point3D point, IEnumerable < Triangle3DElement > shadowingTriangles)

Determines the amount of obstruction of the light that results at point due to the specified shadowing Triangles .

Public Attributes

• bool CastsShadow => false

Properties

```
• double Intensity [get, set]

The intensity of the light.
```

6.1.1 Detailed Description

Represents a uniform ambien light source.

Definition at line 74 of file Lights.cs.

6.1.2 Constructor & Destructor Documentation

6.1.2.1 AmbientLightSource()

Creates a new AmbientLightSource instance.

Parameters

intensity	The intensity of the light.
-----------	-----------------------------

Definition at line 88 of file Lights.cs.

6.1.3 Property Documentation

6.1.3.1 Intensity

```
double VectSharp.ThreeD.AmbientLightSource.Intensity [get], [set]
```

The intensity of the light.

Definition at line 79 of file Lights.cs.

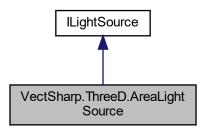

The documentation for this class was generated from the following file:

• VectSharp.ThreeD/Lights.cs

6.2 VectSharp.ThreeD.AreaLightSource Class Reference

Represents a light source emitting light from a circular area.

Inheritance diagram for VectSharp.ThreeD.AreaLightSource:

Public Member Functions

Creates a new AreaLightSource instance.

LightIntensity GetLightAt (Point3D point)

Computes the light intensity at the specified point, without taking into account any obstructions.

double GetObstruction (Point3D point, IEnumerable < Triangle3DElement > shadowingTriangles)

Determines the amount of obstruction of the light that results at point due to the specified shadowing Triangles .

Properties

```
• bool CastsShadow = true [get, set]
```

• Point3D Center [get]

The centre of the light-emitting area.

NormalizedVector3D Direction [get]

The direction of the light's main axis, i.e. the normal to the plane containing the light-emitting area.

• double Radius [get]

The radius of the light emitting area.

• double PenumbraRadius [get]

The radius of the penumbra area.

• double Intensity [get, set]

The base intensity of the light.

• double SourceDistance [get]

The distance between the focal point of the light and the light's Center.

double DistanceAttenuationExponent = 2 [get, set]

An exponent determining how fast the light attenuates with increasing distance. Set to 0 to disable distance attenuation.

• double PenumbraAttenuationExponent = 1 [get, set]

An exponent determining how fast the light attenuates between the light-emitting area radius and the penumbra radius.

int ShadowSamplingPointCount [get]

The number of points to use when determining the amount of light that is obstructed at a certain point.

6.2.1 Detailed Description

Represents a light source emitting light from a circular area.

Definition at line 562 of file Lights.cs.

6.2.2 Constructor & Destructor Documentation

6.2.2.1 AreaLightSource()

Creates a new AreaLightSource instance.

Parameters

intensity	The base intensity of the light.
center	The centre of the light-emitting area.
radius	The radius of the light-emitting area.
penumbraRadius	The radius of the penumbra area.
direction	The direction of the light.
sourceDistance	The distance between the focal point of the light and the light's center.
shadowSamplingPointCount	The number of points to use when determining the amount of light that is obstructed at a certain point.

Definition at line 626 of file Lights.cs.

6.2.3 Property Documentation

6.2.3.1 Center

```
Point3D VectSharp.ThreeD.AreaLightSource.Center [get]
```

The centre of the light-emitting area.

Definition at line 570 of file Lights.cs.

6.2.3.2 Direction

```
NormalizedVector3D VectSharp.ThreeD.AreaLightSource.Direction [get]
```

The direction of the light's main axis, i.e. the normal to the plane containing the light-emitting area.

Definition at line 577 of file Lights.cs.

6.2.3.3 DistanceAttenuationExponent

```
double VectSharp.ThreeD.AreaLightSource.DistanceAttenuationExponent = 2 [get], [set]
```

An exponent determining how fast the light attenuates with increasing distance. Set to 0 to disable distance attenuation.

Definition at line 602 of file Lights.cs.

6.2.3.4 Intensity

```
double VectSharp.ThreeD.AreaLightSource.Intensity [get], [set]
```

The base intensity of the light.

Definition at line 592 of file Lights.cs.

6.2.3.5 PenumbraAttenuationExponent

```
double VectSharp.ThreeD.AreaLightSource.PenumbraAttenuationExponent = 1 [get], [set]
```

An exponent determining how fast the light attenuates between the light-emitting area radius and the penumbra radius.

Definition at line 607 of file Lights.cs.

6.2.3.6 PenumbraRadius

```
double VectSharp.ThreeD.AreaLightSource.PenumbraRadius [get]
```

The radius of the penumbra area.

Definition at line 587 of file Lights.cs.

6.2.3.7 Radius

```
double VectSharp.ThreeD.AreaLightSource.Radius [get]
```

The radius of the light emitting area.

Definition at line 582 of file Lights.cs.

6.2.3.8 ShadowSamplingPointCount

```
int VectSharp.ThreeD.AreaLightSource.ShadowSamplingPointCount [get]
```

The number of points to use when determining the amount of light that is obstructed at a certain point.

Definition at line 612 of file Lights.cs.

6.2.3.9 SourceDistance

```
double VectSharp.ThreeD.AreaLightSource.SourceDistance [get]
```

The distance between the focal point of the light and the light's Center.

Definition at line 597 of file Lights.cs.

The documentation for this class was generated from the following file:

VectSharp.ThreeD/Lights.cs

6.3 VectSharp.Canvas.AvaloniaContextInterpreter Class Reference

Contains methods to render a Page to an Avalonia. Controls. Canvas.

Public Types

enum TextOptions { TextOptions.AlwaysConvert, TextOptions.ConvertIfNecessary, TextOptions.NeverConvert
 }

Defines whether text items should be converted into paths when drawing.

Static Public Member Functions

- static Avalonia. Controls. Canvas PaintToCanvas (this Page page, TextOptions textOption=TextOptions. ConvertIfNecessary)

 Render a Page to an Avalonia. Controls. Canvas.
- static Avalonia.Controls.Canvas PaintToCanvas (this Page page, bool graphicsAsControls, TextOptions text
 —
 Option=TextOptions.ConvertIfNecessary)

Render a Page to an Avalonia. Controls. Canvas.

static Avalonia.Controls.Canvas PaintToCanvas (this Page page, bool graphicsAsControls, Dictionary string, Delegate > taggedActions, bool removeTaggedActionsAfterExecution=true, TextOptions text

 Option=TextOptions.ConvertIfNecessary)

Render a Page to an Avalonia. Controls. Canvas.

static Avalonia.Controls.Canvas PaintToCanvas (this Page page, Dictionary < string, Delegate > tagged ←
 Actions, bool removeTaggedActionsAfterExecution=true, TextOptions textOption=TextOptions.ConvertIfNecessary)

Render a Page to an Avalonia. Controls. Canvas.

6.3.1 Detailed Description

Contains methods to render a Page to an Avalonia. Controls. Canvas.

Definition at line 1905 of file AvaloniaContext.cs.

6.3.2 Member Enumeration Documentation

6.3.2.1 TextOptions

enum VectSharp.Canvas.AvaloniaContextInterpreter.TextOptions [strong]

Defines whether text items should be converted into paths when drawing.

Enumerator

AlwaysConvert Converts all text items into paths.	
ConvertIfNecessary	Converts all text items into paths, with the exception of those that use a standard font.
NeverConvert	Does not convert any text items into paths.

Definition at line 1910 of file AvaloniaContext.cs.

6.3.3 Member Function Documentation

6.3.3.1 PaintToCanvas() [1/4]

static Avalonia.Controls.Canvas VectSharp.Canvas.AvaloniaContextInterpreter.PaintToCanvas (
this Page page,

```
bool graphicsAsControls,
Dictionary< string, Delegate > taggedActions,
bool removeTaggedActionsAfterExecution = true,
TextOptions textOption = TextOptions.ConvertIfNecessary ) [static]
```

Render a Page to an Avalonia. Controls. Canvas.

Parameters

page	The Page to render.
graphicsAsControls	If this is true, each graphics object (e.g. paths, text) is rendered as a separate Avalonia.Controls.Control. Otherwise, they are directly rendered onto the drawing context (which is faster, but does not allow interactivity).
taggedActions	A Dictionary <string, delegate=""> containing the Actions that will be performed on items with the corresponding tag. If <i>graphicsAsControls</i> is true, the delegates should be voids that accept one parameter of type TextBlock or Path (depending on the tagged item), otherwise, they should accept one parameter of type RenderAction and return an IEnumerable<renderaction> of the actions that will actually be performed.</renderaction></string,>
removeTaggedActionsAfterExecution	Whether the Actions should be removed from <i>taggedActions</i> after their execution. Set to false if the same Action should be performed on multiple items with the same tag.
textOption	Defines whether text items should be converted into paths when drawing.

Returns

An Avalonia. Controls. Canvas containing the rendered graphics objects.

Definition at line 1973 of file AvaloniaContext.cs.

6.3.3.2 PaintToCanvas() [2/4]

Render a Page to an Avalonia. Controls. Canvas.

Parameters

page	The Page to render.
graphicsAsControls	If this is true, each graphics object (e.g. paths, text) is rendered as a separate Avalonia.Controls.Control. Otherwise, they are directly rendered onto the drawing context (which is faster, but does not allow interactivity).
textOption	Defines whether text items should be converted into paths when drawing.

Returns

An Avalonia. Controls. Canvas containing the rendered graphics objects.

Definition at line 1949 of file AvaloniaContext.cs.

6.3.3.3 PaintToCanvas() [3/4]

Render a Page to an Avalonia. Controls. Canvas.

Parameters

page	The Page to render.
taggedActions	A Dictionary <string, delegate=""> containing the Actions that will be performed on items with the corresponding tag. The delegates should accept one parameter of type TextBlock or Path (depending on the tagged item).</string,>
removeTaggedActionsAfterExecution	Whether the Actions should be removed from <i>taggedActions</i> after their execution. Set to false if the same Action should be performed on multiple items with the same tag.
textOption	Defines whether text items should be converted into paths when drawing.

Returns

An Avalonia. Controls. Canvas containing the rendered graphics objects.

Definition at line 1996 of file AvaloniaContext.cs.

6.3.3.4 PaintToCanvas() [4/4]

Render a Page to an Avalonia. Controls. Canvas.

Parameters

page	The Page to render.
textOption	Defines whether text items should be converted into paths when drawing.

Returns

An Avalonia. Controls. Canvas containing the rendered graphics objects.

Definition at line 1934 of file AvaloniaContext.cs.

The documentation for this class was generated from the following file:

· VectSharp.Canvas/AvaloniaContext.cs

6.4 VectSharp.TrueTypeFile.Bearings Struct Reference

Represents the left- and right-side bearings of a glyph.

Public Attributes

· int LeftSideBearing

The left-side bearing of the glyph.

· int RightSideBearing

The right-side bearing of the glyph.

6.4.1 Detailed Description

Represents the left- and right-side bearings of a glyph.

Definition at line 2115 of file TrueType.cs.

6.4.2 Member Data Documentation

6.4.2.1 LeftSideBearing

 $\verb|int VectSharp.TrueTypeFile.Bearings.LeftSideBearing|\\$

The left-side bearing of the glyph.

Definition at line 2120 of file TrueType.cs.

6.4.2.2 RightSideBearing

int VectSharp.TrueTypeFile.Bearings.RightSideBearing

The right-side bearing of the glyph.

Definition at line 2125 of file TrueType.cs.

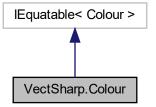

The documentation for this struct was generated from the following file:

VectSharp/TrueType.cs

6.5 VectSharp.Colour Struct Reference

Represents an RGB colour.

Inheritance diagram for VectSharp.Colour:

Public Member Functions

- override bool Equals (object obj)
- bool Equals (Colour col)
- override int GetHashCode ()
- string ToCSSString (bool includeAlpha)

Convert the Colour object into a hex string that is constituted by a "#" followed by two-digit hexadecimal representations of the red, green and blue components of the colour (in the range 0x00 - 0xFF). Optionally also includes opacity (alpha channel) data.

Colour WithAlpha (double alpha)

Create a new Colour with the same RGB components as the current Colour, but with the specified alpha.

Colour WithAlpha (byte alpha)

 $\textit{Create a new Colour with the same RGB components as the current \textit{Colour, but with the specified alpha} \;.$

- double double Z ToXYZ ()
- double double b ToLab ()
- double double L ToHSL ()

Static Public Member Functions

• static Colour FromRgb (double r, double g, double b)

Create a new colour from RGB (red, green and blue) values.

static Colour FromRgb (byte r, byte g, byte b)

Create a new colour from RGB (red, green and blue) values.

• static Colour FromRgb (int r, int g, int b)

Create a new colour from RGB (red, green and blue) values.

• static Colour FromRgba (double r, double g, double b, double a)

Create a new colour from RGBA (red, green, blue and alpha) values.

static Colour FromRgba (byte r, byte g, byte b, byte a)

Create a new colour from RGBA (red, green, blue and alpha) values.

static Colour FromRgba (byte r, byte g, byte b, double a)

Create a new colour from RGBA (red, green, blue and alpha) values.

static Colour FromRgba (int r, int g, int b, int a)

Create a new colour from RGBA (red, green, blue and alpha) values.

• static Colour FromRgba (int r, int g, int b, double a)

Create a new colour from RGBA (red, green, blue and alpha) values.

static Colour FromRgba ((int r, int g, int b, double a) colour)

Create a new colour from RGBA (red, green, blue and alpha) values.

- static bool operator== (Colour col1, Colour col2)
- static bool operator!= (Colour col1, Colour col2)
- static ? Colour FromCSSString (string cssString)

Convert a CSS colour string into a Colour object.

static Colour WithAlpha (Colour original, double alpha)

Create a new Colour with the same RGB components as the original Colour, but with the specified alpha.

static Colour WithAlpha (Colour original, byte alpha)

Create a new Colour with the same RGB components as the original Colour, but with the specified alpha .

• static Colour FromXYZ (double x, double y, double z)

Creates a Colour from CIE XYZ coordinates.

• static Colour FromLab (double L, double a, double b)

Creates a Colour from CIE Lab coordinates (under Illuminant D65).

• static Colour FromHSL (double h, double s, double l)

Creates a Colour from HSL coordinates.

Public Attributes

double R

Red component of the colour. Range: [0, 1].

double G

Green component of the colour. Range: [0, 1].

double B

Blue component of the colour. Range: [0, 1].

· double A

Alpha component of the colour. Range: [0, 1].

double X

Converts a Colour to the CIE XYZ colour space.

- · double double Y
- double L

Converts a Colour to the CIE Lab colour space (under Illuminant D65).

- double double a
- double H

Converts a Colour to the HSL colour space.

· double double S

6.5.1 Detailed Description

Represents an RGB colour.

Definition at line 169 of file Graphics.cs.

6.5.2 Member Function Documentation

6.5.2.1 FromCSSString()

```
static ? Colour VectSharp.Colour.FromCSSString ( string \ cssString \ ) \quad [static]
```

Convert a CSS colour string into a Colour object.

Parameters

cssString	The CSS colour string. In addition to 148 standard colour names (case-insensitive), #RGB,
	#RGBA, #RRGGBB and #RRGGBBAA hex strings and rgb(r, g, b) and rgba(r, g, b, a) functional
	colour notations are supported.

Returns

Definition at line 369 of file Graphics.cs.

6.5.2.2 FromHSL()

```
static Colour VectSharp.Colour.FromHSL ( \label{eq:colour} \mbox{double $h$,} \\ \mbox{double $s$,} \\ \mbox{double $l$ ) [static]}
```

Creates a Colour from HSL coordinates.

Parameters

h	The H component. Should be in range [0, 1].
s	The S component. Should be in range [0, 1].
1	The L component. Should be in range [0, 1].

Returns

A Colour created from the specified components.

Definition at line 719 of file Graphics.cs.

6.5.2.3 FromLab()

```
static Colour VectSharp.Colour.FromLab (  \mbox{double $L$,} \\ \mbox{double $a$,} \\ \mbox{double $b$ ) [static]}
```

Creates a Colour from CIE Lab coordinates (under Illuminant D65).

Parameters

L	The L* component.
а	The a* component.
b	The b* component.

Returns

An sRGB Colour created from the specified components.

Definition at line 641 of file Graphics.cs.

6.5.2.4 FromRgb() [1/3]

Create a new colour from RGB (red, green and blue) values.

Parameters

r	The red component of the colour. Range: [0, 255].
g	The green component of the colour. Range: [0, 255].
b	The blue component of the colour. Range: [0, 255].

Returns

A Colour struct with the specified components and an alpha component of 1.

Definition at line 218 of file Graphics.cs.

6.5.2.5 FromRgb() [2/3]

```
static Colour VectSharp.Colour.FromRgb (  \mbox{double } r, \\ \mbox{double } g, \\ \mbox{double } b \;) \; \mbox{[static]}
```

Create a new colour from RGB (red, green and blue) values.

Parameters

r	The red component of the colour. Range: [0, 1].
g	The green component of the colour. Range: [0, 1].
b	The blue component of the colour. Range: [0, 1].

Returns

A Colour struct with the specified components and an alpha component of 1.

Definition at line 206 of file Graphics.cs.

6.5.2.6 FromRgb() [3/3]

Create a new colour from RGB (red, green and blue) values.

Parameters

	r	The red component of the colour. Range: [0, 255].
	g	The green component of the colour. Range: [0, 255].
Ī	b	The blue component of the colour. Range: [0, 255].

Returns

A Colour struct with the specified components and an alpha component of 1.

Definition at line 230 of file Graphics.cs.

6.5.2.7 FromRgba() [1/6]

```
static Colour VectSharp.Colour.FromRgba (  ({\tt int \ r, \ int \ g, \ int \ b, \ double \ a)} \ \ {\it colour \ )} \ \ [{\tt static}]
```

Create a new colour from RGBA (red, green, blue and alpha) values.

Parameters

colour	A ValueTuple <int32, double="" int32,=""> containing component information for the colour. For r, g,</int32,>	
	and b, range: [0, 255]; for a, range: [0, 1].	

Returns

A Colour struct with the specified components.

Definition at line 304 of file Graphics.cs.

6.5.2.8 FromRgba() [2/6]

Create a new colour from RGBA (red, green, blue and alpha) values.

Parameters

r	The red component of the colour. Range: [0, 255].
g	The green component of the colour. Range: [0, 255].
b	The blue component of the colour. Range: [0, 255].
а	The alpha component of the colour. Range: [0, 255].

Returns

A ColourColour struct with the specified components.

Definition at line 256 of file Graphics.cs.

6.5.2.9 FromRgba() [3/6]

```
static Colour VectSharp.Colour.FromRgba (  \qquad \qquad \text{byte } r,
```

```
byte g, byte b, double a) [static]
```

Create a new colour from RGBA (red, green, blue and alpha) values.

Parameters

r	The red component of the colour. Range: [0, 255].
g	The green component of the colour. Range: [0, 255].
b	The blue component of the colour. Range: [0, 255].
а	The alpha component of the colour. Range: [0, 1].

Returns

A Colour struct with the specified components.

Definition at line 269 of file Graphics.cs.

6.5.2.10 FromRgba() [4/6]

Create a new colour from RGBA (red, green, blue and alpha) values.

Parameters

r	The red component of the colour. Range: [0, 1].
g	The green component of the colour. Range: [0, 1].
b	The blue component of the colour. Range: [0, 1].
а	The alpha component of the colour. Range: [0, 1].

Returns

A Colour struct with the specified components.

Definition at line 243 of file Graphics.cs.

6.5.2.11 FromRgba() [5/6]

```
static Colour VectSharp.Colour.FromRgba (  \qquad \qquad \text{int } r,
```

```
int g,
int b,
double a ) [static]
```

Create a new colour from RGBA (red, green, blue and alpha) values.

Parameters

r	The red component of the colour. Range: [0, 255].
g	The green component of the colour. Range: [0, 255].
b	The blue component of the colour. Range: [0, 255].
а	The alpha component of the colour. Range: [0, 1].

Returns

A Colour struct with the specified components.

Definition at line 294 of file Graphics.cs.

6.5.2.12 FromRgba() [6/6]

Create a new colour from RGBA (red, green, blue and alpha) values.

Parameters

r	The red component of the colour. Range: [0, 255].
g	The green component of the colour. Range: [0, 255].
b	The blue component of the colour. Range: [0, 255].
а	The alpha component of the colour. Range: [0, 255].

Returns

A Colour struct with the specified components.

Definition at line 281 of file Graphics.cs.

6.5.2.13 FromXYZ()

```
static Colour VectSharp.Colour.FromXYZ ( \label{eq:colour} \mbox{double $x$,}
```

```
double y,
double z ) [static]
```

Creates a Colour from CIE XYZ coordinates.

Parameters

Χ	The X coordinate.
y	The Y coordinate.
Z	The Z coordinate.

Returns

An sRGB Colour created from the specified components.

Definition at line 559 of file Graphics.cs.

6.5.2.14 ToCSSString()

```
string VectSharp.Colour.ToCSSString (
                bool includeAlpha )
```

Convert the Colour object into a hex string that is constituted by a "#" followed by two-digit hexadecimal representations of the red, green and blue components of the colour (in the range 0x00 - 0xFF). Optionally also includes opacity (alpha channel) data.

Parameters

includeAlpha	Whether two additional hex digits representing the colour's opacity (alpha channel) should be	
	included in the string.	

Returns

A hex colour string.

Definition at line 352 of file Graphics.cs.

6.5.2.15 WithAlpha() [1/4]

Create a new Colour with the same RGB components as the current Colour, but with the specified alpha .

Parameters

ent of the new Colour.	alpha
------------------------	-------

Returns

A Colour struct with the same RGB components as the current Colour and the specified alpha .

Definition at line 505 of file Graphics.cs.

6.5.2.16 WithAlpha() [2/4]

Create a new Colour with the same RGB components as the original Colour, but with the specified alpha.

Parameters

original	The original Colour from which the RGB components will be taken.
alpha	The alpha component of the new Colour.

Returns

A Colour struct with the same RGB components as the original Colour and the specified alpha.

Definition at line 485 of file Graphics.cs.

6.5.2.17 WithAlpha() [3/4]

Create a new Colour with the same RGB components as the original Colour, but with the specified alpha.

Parameters

original	The original Colour from which the RGB components will be taken.
alpha	The alpha component of the new Colour.

Returns

A Colour struct with the same RGB components as the original Colour and the specified alpha.

Definition at line 474 of file Graphics.cs.

6.5.2.18 WithAlpha() [4/4]

Create a new Colour with the same RGB components as the current Colour, but with the specified alpha.

Parameters

alpha The alpha component of the new Colour.

Returns

A Colour struct with the same RGB components as the current Colour and the specified alpha.

Definition at line 495 of file Graphics.cs.

6.5.3 Member Data Documentation

6.5.3.1 A

```
double VectSharp.Colour.A
```

Alpha component of the colour. Range: [0, 1].

Definition at line 189 of file Graphics.cs.

6.5.3.2 B

```
double VectSharp.Colour.B
```

Blue component of the colour. Range: [0, 1].

Definition at line 184 of file Graphics.cs.

6.5.3.3 G

```
double VectSharp.Colour.G
```

Green component of the colour. Range: [0, 1].

Definition at line 179 of file Graphics.cs.

6.5.3.4 H

```
double VectSharp.Colour.H
```

Converts a Colour to the HSL colour space.

Returns

A ValueType containing the H, S and L components of the Colour. Each component has range [0, 1].

Definition at line 672 of file Graphics.cs.

6.5.3.5 L

```
double VectSharp.Colour.L
```

Converts a Colour to the CIE Lab colour space (under Illuminant D65).

Returns

A ValueType containing the L*, a* and b* components of the Colour.

Definition at line 603 of file Graphics.cs.

6.5.3.6 R

```
double VectSharp.Colour.R
```

Red component of the colour. Range: [0, 1].

Definition at line 174 of file Graphics.cs.

6.5.3.7 X

double VectSharp.Colour.X

Converts a Colour to the CIE XYZ colour space.

Returns

A ValueTuple containing the X, Y and Z components of the Colour.

Definition at line 514 of file Graphics.cs.

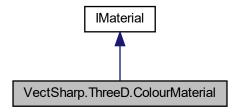

The documentation for this struct was generated from the following files:

- VectSharp/Graphics.cs
- · VectSharp/StandardColours.cs

6.6 VectSharp.ThreeD.ColourMaterial Class Reference

Represents a material that always has the same colour, regardless of light.

Inheritance diagram for VectSharp.ThreeD.ColourMaterial:

Public Member Functions

ColourMaterial (Colour colour)

Creates a new ColourMaterial instance.

Colour GetColour (Point3D point, NormalizedVector3D surfaceNormal, Camera camera, IList< ILightSource
 lights, IList< double > obstructions)

Obtains the Colour at the specified point.

Properties

• Colour Colour [get]

The colour of the material.

6.6.1 Detailed Description

Represents a material that always has the same colour, regardless of light.

Definition at line 31 of file Materials.cs.

6.6.2 Constructor & Destructor Documentation

6.6.2.1 ColourMaterial()

```
\begin{tabular}{ll} VectSharp.ThreeD.ColourMaterial.ColourMaterial ( \\ Colour\ colour\ ) \end{tabular}
```

Creates a new ColourMaterial instance.

Parameters

colour	The colour of the material.
--------	-----------------------------

Definition at line 42 of file Materials.cs.

6.6.3 Property Documentation

6.6.3.1 Colour

```
Colour VectSharp.ThreeD.ColourMaterial.Colour [get]
```

The colour of the material.

Definition at line 36 of file Materials.cs.

The documentation for this class was generated from the following file:

• VectSharp.ThreeD/Materials.cs

6.7 VectSharp.Colours Class Reference

Standard colours.

Static Public Attributes

```
Colour VectSharp.Colours.YellowGreen = Colour.FromRgb(154, 205, 50) [static]
```

YellowGreen #9ACD32

Definition at line 447 of file StandardColours.cs.

The documentation for this class was generated from the following file:

VectSharp/StandardColours.cs

6.8 VectSharp.Font.DetailedFontMetrics Class Reference

Represents detailed information about the metrics of a text string when drawn with a certain font.

Properties

• double Width [get]

Width of the text (measured on the actual glyph outlines).

• double Height [get]

Height of the text (measured on the actual glyph outlines).

• double LeftSideBearing [get]

How much the leftmost glyph in the string overhangs the glyph origin on the left. Positive for glyphs that hang past the origin (e.g. italic 'f').

• double RightSideBearing [get]

How much the rightmost glyph in the string overhangs the glyph end on the right. Positive for glyphs that hang past the end (e.g. italic 'f').

• double Top [get]

Height of the tallest glyph in the string over the baseline. Always >= 0.

• double Bottom [get]

Depth of the deepest glyph in the string below the baseline. Always \leq = 0.

6.8.1 Detailed Description

Represents detailed information about the metrics of a text string when drawn with a certain font.

Definition at line 786 of file Graphics.cs.

6.8.2 Property Documentation

6.8.2.1 Bottom

```
double VectSharp.Font.DetailedFontMetrics.Bottom [get]
```

Depth of the deepest glyph in the string below the baseline. Always \leq = 0.

Definition at line 816 of file Graphics.cs.

6.8.2.2 Height

```
double VectSharp.Font.DetailedFontMetrics.Height [get]
```

Height of the text (measured on the actual glyph outlines).

Definition at line 796 of file Graphics.cs.

6.8.2.3 LeftSideBearing

```
double VectSharp.Font.DetailedFontMetrics.LeftSideBearing [get]
```

How much the leftmost glyph in the string overhangs the glyph origin on the left. Positive for glyphs that hang past the origin (e.g. italic 'f').

Definition at line 801 of file Graphics.cs.

6.8.2.4 RightSideBearing

```
double VectSharp.Font.DetailedFontMetrics.RightSideBearing [get]
```

How much the rightmost glyph in the string overhangs the glyph end on the right. Positive for glyphs that hang past the end (e.g. italic 'f').

Definition at line 806 of file Graphics.cs.

6.8.2.5 Top

```
double VectSharp.Font.DetailedFontMetrics.Top [get]
```

Height of the tallest glyph in the string over the baseline. Always \geq = 0.

Definition at line 811 of file Graphics.cs.

6.8.2.6 Width

```
double VectSharp.Font.DetailedFontMetrics.Width [get]
```

Width of the text (measured on the actual glyph outlines).

Definition at line 791 of file Graphics.cs.

6.9 VectSharp.DisposableIntPtr Class Reference

An IDisposable wrapper around an IntPtr that frees the allocated memory when it is disposed.

Inheritance diagram for VectSharp.DisposableIntPtr:

Public Member Functions

- DisposableIntPtr (IntPtr pointer)

 Create a new DisposableIntPtr.
- void **Dispose** ()

Public Attributes

· readonly IntPtr InternalPointer

The pointer to the unmanaged memory.

6.9.1 Detailed Description

An IDisposable wrapper around an IntPtr that frees the allocated memory when it is disposed.

Definition at line 53 of file RasterImage.cs.

6.9.2 Constructor & Destructor Documentation

6.9.2.1 DisposableIntPtr()

```
\label{thm:possible} VectSharp. Disposable IntPtr. Disposable IntPtr \ ( IntPtr \ pointer \ )
```

Create a new DisposableIntPtr.

Parameters

pointer	The pointer that should be freed upon disposing of this object.
---------	---

Definition at line 64 of file RasterImage.cs.

6.9.3 Member Data Documentation

6.9.3.1 InternalPointer

```
{\tt readonly\ IntPtr\ VectSharp.DisposableIntPtr.InternalPointer}
```

The pointer to the unmanaged memory.

Definition at line 58 of file RasterImage.cs.

The documentation for this class was generated from the following file:

VectSharp/RasterImage.cs

6.10 VectSharp.Document Class Reference

Represents a collection of pages.

Public Member Functions

• Document ()

Create a new document.

Public Attributes

List< Page > Pages = new List<Page>()
 The pages in the document.

6.10.1 Detailed Description

Represents a collection of pages.

Definition at line 27 of file Document.cs.

6.10.2 Constructor & Destructor Documentation

6.10.2.1 Document()

```
VectSharp.Document.Document ( )
```

Create a new document.

Definition at line 38 of file Document.cs.

6.10.3 Member Data Documentation

6.10.3.1 Pages

```
List<Page> VectSharp.Document.Pages = new List<Page>()
```

The pages in the document.

Definition at line 32 of file Document.cs.

The documentation for this class was generated from the following file:

VectSharp/Document.cs

6.11 VectSharp.Font Class Reference

Represents a typeface with a specific size.

Classes

class DetailedFontMetrics

Represents detailed information about the metrics of a text string when drawn with a certain font.

Public Member Functions

• Font (FontFamily fontFamily, double fontSize)

Create a new Font object, given the base typeface and the font size.

Size MeasureText (string text)

Measure the size of a text string when typeset with this font.

DetailedFontMetrics MeasureTextAdvanced (string text)

Measure all the metrics of a text string when typeset with this font.

Properties

```
• double FontSize [get]
```

Font size, in graphics units.

FontFamily FontFamily [get]

Font typeface.

• double Ascent [get]

Maximum height over the baseline of the usual glyphs in the font (there may be glyphs taller than this). Always >= 0.

• double Descent [get]

Maximum depth below the baseline of the usual glyphs in the font (there may be glyphs deeper than this). Always \leq = 0

• double YMax [get]

Absolute maximum height over the baseline of the glyphs in the font. Always > = 0.

• double YMin [get]

Absolute maximum depth below the baseline of the glyphs in the font. Always \leq = 0.

6.11.1 Detailed Description

Represents a typeface with a specific size.

Definition at line 781 of file Graphics.cs.

6.11.2 Constructor & Destructor Documentation

6.11.2.1 Font()

Create a new Font object, given the base typeface and the font size.

Parameters

fontFamily	Base typeface. See FontFamily.
fontSize	The font size, in graphics units.

Definition at line 844 of file Graphics.cs.

6.11.3 Member Function Documentation

6.11.3.1 MeasureText()

```
Size VectSharp.Font.MeasureText ( string text)
```

Measure the size of a text string when typeset with this font.

Parameters

text	The string to measure.
------	------------------------

Returns

A Size object representing the width and height of the text.

Definition at line 927 of file Graphics.cs.

6.11.3.2 MeasureTextAdvanced()

```
\begin{tabular}{lll} {\tt DetailedFontMetrics} & {\tt VectSharp.Font.MeasureTextAdvanced} & (\\ & & {\tt string} & text \end{tabular} \label{textsol}
```

Measure all the metrics of a text string when typeset with this font.

Parameters

text	The string to measure.

Returns

A DetailedFontMetrics object representing the metrics of the text.

Definition at line 960 of file Graphics.cs.

6.11.4 Property Documentation

6.11.4.1 Ascent

```
double VectSharp.Font.Ascent [get]
```

Maximum height over the baseline of the usual glyphs in the font (there may be glyphs taller than this). Always >= 0.

Definition at line 853 of file Graphics.cs.

6.11.4.2 Descent

```
double VectSharp.Font.Descent [get]
```

Maximum depth below the baseline of the usual glyphs in the font (there may be glyphs deeper than this). Always ≤ 0 .

Definition at line 871 of file Graphics.cs.

6.11.4.3 FontFamily

```
FontFamily VectSharp.Font.FontFamily [get]
```

Font typeface.

Definition at line 837 of file Graphics.cs.

6.11.4.4 FontSize

```
double VectSharp.Font.FontSize [get]
```

Font size, in graphics units.

Definition at line 832 of file Graphics.cs.

6.11.4.5 YMax

```
double VectSharp.Font.YMax [get]
```

Absolute maximum height over the baseline of the glyphs in the font. Always \geq = 0.

Definition at line 889 of file Graphics.cs.

6.11.4.6 YMin

```
double VectSharp.Font.YMin [get]
```

Absolute maximum depth below the baseline of the glyphs in the font. Always \leq = 0.

Definition at line 907 of file Graphics.cs.

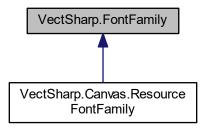

The documentation for this class was generated from the following file:

· VectSharp/Graphics.cs

6.12 VectSharp.FontFamily Class Reference

Represents a typeface.

Inheritance diagram for VectSharp.FontFamily:

Public Types

• enum StandardFontFamilies {

StandardFontFamilies.TimesRoman, StandardFontFamilies.TimesBold, StandardFontFamilies.TimesItalic, StandardFontFamilies.TimesBoldItalic,

Standard Font Families. Helvetica, Standard Font Families. Helvetica Bold, Standard Font Families. Helvetica Bold Oblique, Standard Families. H

StandardFontFamilies.Courier, StandardFontFamilies.CourierBold, StandardFontFamilies.CourierOblique, StandardFontFamilies.CourierBoldOblique,

StandardFontFamilies.Symbol, StandardFontFamilies.ZapfDingbats }

The 14 standard font families.

Public Member Functions

• FontFamily (string fileName)

Create a new FontFamily.

FontFamily (Stream ttfStream)

Create a new FontFamily.

· FontFamily (StandardFontFamilies standardFontFamily)

Create a new standard FontFamily.

Static Public Attributes

The names of the 14 standard families that are guaranteed to be displayed correctly.

• static string[] StandardFontFamilyResources

The names of the resource streams pointing to the included TrueType font files for each of the standard 14 font families.

Properties

• bool IsStandardFamily [get]

Whether this is one of the 14 standard font families or not.

• string FileName [get]

Full path to the TrueType font file for this font family (or, if this is a standard font family, name of the font family).

• TrueTypeFile TrueTypeFile [get]

Parsed TrueType font file for this font family. See also: See also

VectSharp.TrueTypeFile

• bool IsBold [get]

Whether this font is bold or not. This is set based on the information included in the OS/2 table of the TrueType file.

• bool IsItalic [get]

Whether this font is italic or oblique or not. This is set based on the information included in the OS/2 table of the TrueType file.

• bool IsOblique [get]

Whether this font is oblique or not. This is set based on the information included in the OS/2 table of the TrueType file.

6.12.1 Detailed Description

Represents a typeface.

Definition at line 996 of file Graphics.cs.

6.12.2 Member Enumeration Documentation

6.12.2.1 StandardFontFamilies

enum VectSharp.FontFamily.StandardFontFamilies [strong]

The 14 standard font families.

Enumerator

TimesRoman	Serif normal regular face.
TimesBold	Serif bold regular face.
TimesItalic	Serif normal italic face.
TimesBoldItalic	Serif bold italic face.
Helvetica	Sans-serif normal regular face.
HelveticaBold	Sans-serif bold regular face.
HelveticaOblique	Sans-serif normal oblique face.
HelveticaBoldOblique	Sans-serif bold oblique face.
Courier	Monospace normal regular face.
CourierBold	Monospace bold regular face.
CourierOblique	Monospace normal oblique face.
CourierBoldOblique	Monospace bold oblique face.
Symbol	Symbol font.
ZapfDingbats	Dingbat font.

Definition at line 1035 of file Graphics.cs.

6.12.3 Constructor & Destructor Documentation

6.12.3.1 FontFamily() [1/3]

Create a new FontFamily.

Parameters

tileName	The full path to the TrueType font file for this font family or the name of a standard font family.
mervanie	The full path to the frue type lont life for this fort family of the name of a standard fort family.

Definition at line 1138 of file Graphics.cs.

6.12.3.2 FontFamily() [2/3]

```
\label{thm:postsum} \begin{tabular}{ll} VectSharp.FontFamily.FontFamily.\\ Stream & ttfStream \end{tabular}
```

Create a new FontFamily.

Parameters

ttfStream	A stream containing a file in TTF format.	
-----------	---	--

Definition at line 1187 of file Graphics.cs.

6.12.3.3 FontFamily() [3/3]

Create a new standard FontFamily.

Parameters

standardFontFamily	The standard font family.
--------------------	---------------------------

Definition at line 1203 of file Graphics.cs.

6.12.4 Member Data Documentation

6.12.4.1 StandardFamilies

```
string [] VectSharp.FontFamily.StandardFamilies = new string[] { "Times-Roman", "Times-Bold",
"Times-Italic", "Times-BoldItalic", "Helvetica", "Helvetica-Bold", "Helvetica-Oblique", "Helvetica-Bold←Oblique", "Courier-Bold", "Courier-Bold", "Courier-BoldOblique", "Symbol", "Zapf←Oblique", "Symbol", "Symbol",
```

The names of the 14 standard families that are guaranteed to be displayed correctly.

Definition at line 1014 of file Graphics.cs.

6.12.4.2 StandardFontFamilyResources

The names of the resource streams pointing to the included TrueType font files for each of the standard 14 font families

Definition at line 1019 of file Graphics.cs.

6.12.5 Property Documentation

6.12.5.1 FileName

```
string VectSharp.FontFamily.FileName [get]
```

Full path to the TrueType font file for this font family (or, if this is a standard font family, name of the font family).

Definition at line 1111 of file Graphics.cs.

6.12.5.2 IsBold

```
bool VectSharp.FontFamily.IsBold [get]
```

Whether this font is bold or not. This is set based on the information included in the OS/2 table of the TrueType file.

Definition at line 1122 of file Graphics.cs.

6.12.5.3 Isltalic

```
bool VectSharp.FontFamily.IsItalic [get]
```

Whether this font is italic or oblique or not. This is set based on the information included in the OS/2 table of the TrueType file.

Definition at line 1127 of file Graphics.cs.

6.12.5.4 IsOblique

```
bool VectSharp.FontFamily.IsOblique [get]
```

Whether this font is oblique or not. This is set based on the information included in the OS/2 table of the TrueType file.

Definition at line 1132 of file Graphics.cs.

6.12.5.5 IsStandardFamily

```
bool VectSharp.FontFamily.IsStandardFamily [get]
```

Whether this is one of the 14 standard font families or not.

Definition at line 1030 of file Graphics.cs.

6.12.5.6 TrueTypeFile

```
TrueTypeFile VectSharp.FontFamily.TrueTypeFile [get]
```

Parsed TrueType font file for this font family. See also:

See also

VectSharp.TrueTypeFile

Definition at line 1117 of file Graphics.cs.

The documentation for this class was generated from the following file:

• VectSharp/Graphics.cs

6.13 VectSharp.Markdown.FormattedString Struct Reference

Represents a string with associated formatting information.

Public Member Functions

• FormattedString (string text, Colour colour, bool isBold, bool isItalic)

Creates a new FormattedString instance.

Properties

```
• string Text [get]
```

The text represented by this object.

• Colour Colour [get]

The colour of the text.

bool IsBold [get]

Whether the text should be rendered as bold or not.

• bool IsItalic [get]

Whether the text should be rendered as italic or not.

6.13.1 Detailed Description

Represents a string with associated formatting information.

Definition at line 15 of file SyntaxHighlighting.cs.

6.13.2 Constructor & Destructor Documentation

6.13.2.1 FormattedString()

Creates a new FormattedString instance.

Parameters

text	The text of the object.
colour	The colour of the text.
isBold	Whether the text should be rendered as bold or not.
isItalic	Whether the text should be rendered as italic or not.

Definition at line 44 of file SyntaxHighlighting.cs.

6.13.3 Property Documentation

6.13.3.1 Colour

```
Colour VectSharp.Markdown.FormattedString.Colour [get]
```

The colour of the text.

Definition at line 25 of file SyntaxHighlighting.cs.

6.13.3.2 IsBold

```
bool VectSharp.Markdown.FormattedString.IsBold [get]
```

Whether the text should be rendered as bold or not.

Definition at line 30 of file SyntaxHighlighting.cs.

6.13.3.3 Isltalic

```
bool VectSharp.Markdown.FormattedString.IsItalic [get]
```

Whether the text should be rendered as italic or not.

Definition at line 35 of file SyntaxHighlighting.cs.

6.13.3.4 Text

```
string VectSharp.Markdown.FormattedString.Text [get]
```

The text represented by this object.

Definition at line 20 of file SyntaxHighlighting.cs.

The documentation for this struct was generated from the following file:

VectSharp.Markdown/SyntaxHighlighting.cs

6.14 VectSharp.Graphics Class Reference

Represents an abstract drawing surface.

Public Member Functions

- void FillPath (GraphicsPath path, Colour fillColour, string tag=null)
 - Fill a GraphicsPath.
- void StrokePath (GraphicsPath path, Colour strokeColour, double lineWidth=1, LineCaps line ← Cap=LineCaps.Butt, LineJoins lineJoinsLineJoins.Miter, LineDash? lineDash=null, string tag=null)

Stroke a GraphicsPath.

void SetClippingPath (GraphicsPath path)

Intersect the current clipping path with the specified GraphicsPath.

void SetClippingPath (double leftX, double topY, double width, double height)

Intersect the current clipping path with the specified rectangle.

void SetClippingPath (Point topLeft, Size size)

Intersect the current clipping path with the specified rectangle.

void Rotate (double angle)

Rotate the coordinate system around the origin.

void RotateAt (double angle, Point pivot)

Rotate the coordinate system around a pivot point.

• void Transform (double a, double b, double c, double d, double e, double f)

Transform the coordinate system with the specified transformation matrix [[a, c, e], [b, d, f], [0, 0, 1]].

void Translate (double x, double y)

Translate the coordinate system origin.

void Translate (Point delta)

Translate the coordinate system origin.

· void Scale (double scaleX, double scaleY)

Scale the coordinate system with respect to the origin.

void FillRectangle (Point topLeft, Size size, Colour fillColour, string tag=null)

Fill a rectangle.

• void FillRectangle (double leftX, double topY, double width, double height, Colour fillColour, string tag=null) Fill a rectangle.

void StrokeRectangle (Point topLeft, Size size, Colour strokeColour, double lineWidth=1, LineCaps line
 — Cap=LineCaps.Butt, LineJoins lineJoinsLineJoins.Miter, LineDash? lineDash=null, string tag=null)

Stroke a rectanale

void StrokeRectangle (double leftX, double topY, double width, double height, Colour strokeColour, double lineWidth=1, LineCaps lineCap=LineCaps.Butt, LineJoins lineJoin=LineJoins.Miter, LineDash? line← Dash=null, string tag=null)

Stroke a rectangle.

 void DrawRasterImage (int sourceX, int sourceY, int sourceWidth, int sourceHeight, double destinationX, double destinationY, double destinationWidth, double destinationHeight, RasterImage image, string tag=null)

Draw a raster image.

void DrawRasterImage (double x, double y, RasterImage image, string tag=null)

Draw a raster image

void DrawRasterImage (Point position, RasterImage image, string tag=null)

Draw a raster image.

• void DrawRasterImage (double x, double y, double width, double height, RasterImage image, string tag=null)

Draw a raster image.

void DrawRasterImage (Point position, Size size, RasterImage image, string tag=null)

Draw a raster image.

 void FillText (Point origin, string text, Font font, Colour fillColour, TextBaselines textBaseline=TextBaselines.Top, string tag=null)

Fill a text string.

Fill a text string.

void StrokeText (Point origin, string text, Font font, Colour strokeColour, TextBaselines textBaseline=TextBaselines.Top, double lineWidth=1, LineCaps lineCap=LineCaps.Butt, LineJoins lineJoin=LineJoins.Miter, LineDash? line ←
 Dash=null, string tag=null)

Stroke a text string.

void StrokeText (double originX, double originY, string text, Font font, Colour strokeColour, TextBaselines textBaseline=TextBaselines.Top, double lineWidth=1, LineCaps lineCap=LineCaps.Butt, LineJoins line
 — Join=LineJoins.Miter, LineDash? lineDash=null, string tag=null)

Stroke a text string.

• void FillTextOnPath (GraphicsPath path, string text, Font font, Colour fillColour, double reference=0, TextAnchors anchor=TextAnchors.Left, TextBaselines textBaseline=TextBaselines.Top, string tag=null)

Fill a text string along a GraphicsPath.

 void StrokeTextOnPath (GraphicsPath path, string text, Font font, Colour strokeColour, double reference=0, TextAnchors anchor=TextAnchors.Left, TextBaselines textBaseline=TextBaselines.Top, double lineWidth=1, LineCaps lineCap=LineCaps.Butt, LineJoins lineJoin=LineJoins.Miter, LineDash? lineDash=null, string tag=null)

Stroke a text string along a GraphicsPath.

Size MeasureText (string text, Font font)

Measure a text string. See also

See also

Font.MeasureText(string), Font.MeasureTextAdvanced(string)

and.

· void Save ()

Save the current transform state (rotation, translation, scale).

void Restore ()

Restore the previous transform state (rotation, translation scale).

void CopyTolGraphicsContext (IGraphicsContext destinationContext)

Copy the current graphics to an instance of a class implementing IGraphicsContext.

void DrawGraphics (Point origin, Graphics graphics)

Draws a Graphics object on the current Graphics object.

void DrawGraphics (double originX, double originY, Graphics graphics)

Draws a Graphics object on the current Graphics object.

Graphics Transform (Func< Point, Point > transformationFunction, double linearisationResolution)

Creates a new Graphics object in which all the graphics actions have been transformed using an arbitrary transformation function. Raster images are replaced by grey rectangles.

Graphics Linearise (double resolution)

Creates a new Graphics object by linearising all of the elements of the current instance, i.e. replacing curve segments with series of line segments that approximate them. Raster images are left unchanged.

Properties

• static UnbalancedStackActions UnbalancedStackAction = UnbalancedStackActions.Throw [get, set]

Determines how an unbalanced graphics state stack (which occurs if the number of calls to Save and Restore is not equal) will be treated. The default is UnbalancedStackActions.Throw.

6.14.1 Detailed Description

Represents an abstract drawing surface.

Definition at line 2321 of file Graphics.cs.

6.14.2 Member Function Documentation

6.14.2.1 CopyTolGraphicsContext()

```
\begin{tabular}{ll} void VectSharp.Graphics.CopyToIGraphicsContext ( \\ IGraphicsContext \ destinationContext ) \end{tabular}
```

Copy the current graphics to an instance of a class implementing IGraphicsContext.

Parameters

destinationContext -	The IGraphicsContext on which the graphics are to be copied.
----------------------	--

Definition at line 2945 of file Graphics.cs.

6.14.2.2 DrawGraphics() [1/2]

Draws a Graphics object on the current Graphics object.

Parameters

originX	The horizontal coordinate at which to place the origin of graphics.
originY	The vertical coordinate at which to place the origin of graphics.
graphics	The Graphics object to draw on the current Graphics object.

Definition at line 3161 of file Graphics.cs.

6.14.2.3 DrawGraphics() [2/2]

```
void VectSharp.Graphics.DrawGraphics (  \begin{array}{c} \text{Point } origin, \\ \text{Graphics } graphics \end{array} )
```

Draws a Graphics object on the current Graphics object.

Parameters

origin	The point at which to place the origin of graphics.
graphics	The Graphics object to draw on the current Graphics object.

Definition at line 3143 of file Graphics.cs.

6.14.2.4 DrawRasterImage() [1/5]

Draw a raster image.

Parameters

X	The horizontal coordinate of the top-left corner of the rectangle delimiting the destination area of the image.	
У	The vertical coordinate of the top-left corner of the rectangle delimiting the destination area of the image.	
width	The width of the rectangle delimiting the destination area of the image.	
height	The height of the rectangle delimiting the destination area of the image.	
image	The image to draw.	
tag	A tag to identify the drawn image.	

Definition at line 2564 of file Graphics.cs.

6.14.2.5 DrawRasterImage() [2/5]

Draw a raster image.

Parameters

X	The horizontal coordinate of the top-left corner of the rectangle delimiting the destination area of the image.
У	The vertical coordinate of the top-left corner of the rectangle delimiting the destination area of the image.
image	The image to draw.
tag	A tag to identify the drawn image.

Definition at line 2539 of file Graphics.cs.

6.14.2.6 DrawRasterImage() [3/5]

```
void VectSharp.Graphics.DrawRasterImage (
    int sourceX,
    int sourceY,
    int sourceWidth,
    int sourceHeight,
    double destinationX,
    double destinationY,
    double destinationWidth,
    double destinationHeight,
```

```
RasterImage image,
string tag = null )
```

Draw a raster image.

Parameters

sourceX	The horizontal coordinate of the top-left corner of the rectangle delimiting the source area of the image.
sourceY	The vertical coordinate of the top-left corner of the rectangle delimiting the source area of the image.
sourceWidth	The width of the rectangle delimiting the source area of the image.
sourceHeight	The height of the rectangle delimiting the source area of the image.
destinationX	The horizontal coordinate of the top-left corner of the rectangle delimiting the destination area of the image.
destinationY	The vertical coordinate of the top-left corner of the rectangle delimiting the destination area of the image.
destinationWidth	The width of the rectangle delimiting the destination area of the image.
destinationHeight	The height of the rectangle delimiting the destination area of the image.
image	The image to draw.
tag	A tag to identify the drawn image.

Definition at line 2527 of file Graphics.cs.

6.14.2.7 DrawRasterImage() [4/5]

Draw a raster image.

Parameters

posit	ion	The the top-left corner of the rectangle delimiting the destination area of the image.
imag	е	The image to draw.
tag		A tag to identify the drawn image.

Definition at line 2550 of file Graphics.cs.

6.14.2.8 DrawRasterImage() [5/5]

Draw a raster image.

Parameters

position	The the top-left corner of the rectangle delimiting the destination area of the image.
size	The size of the rectangle delimiting the destination area of the image.
image	The image to draw.
tag	A tag to identify the drawn image.

Definition at line 2576 of file Graphics.cs.

6.14.2.9 FillPath()

Fill a GraphicsPath.

Parameters

path	The GraphicsPath to fill.
fillColour	The Colour with which to fill the GraphicsPath.
tag	A tag to identify the filled path.

Definition at line 2336 of file Graphics.cs.

6.14.2.10 FillRectangle() [1/2]

Fill a rectangle.

Parameters

leftX	The horizontal coordinate of the top-left corner of the rectangle.	
topY	The vertical coordinate of the top-left corner of the rectangle.	
width	The width of the rectangle.	
height	The height of the rectangle.	
fillColour	The colour with which to fill the rectangle.	
tag	A tag to identify the filled rectangle.	

Definition at line 2475 of file Graphics.cs.

6.14.2.11 FillRectangle() [2/2]

Fill a rectangle.

Parameters

topLeft	The top-left corner of the rectangle.
size	The size of the rectangle.
fillColour	The colour with which to fill the rectangle.
tag	A tag to identify the filled rectangle.

Definition at line 2461 of file Graphics.cs.

6.14.2.12 FillText() [1/2]

Fill a text string.

Parameters

originX	The horizontal coordinate of the text origin.
originY	The vertical coordinate of the text origin. See textBaseline.
text	The string to draw.
font	The font with which to draw the text.
fillColour	The colour to use to fill the text.
textBaseline	The text baseline (determines what <i>originY</i> represents).
tag	A tag to identify the filled text.

Definition at line 2605 of file Graphics.cs.

6.14.2.13 FillText() [2/2]

Fill a text string.

Parameters

origin	The text origin. See textBaseline.	
text	The string to draw.	
font	The font with which to draw the text.	
fillColour	The colour to use to fill the text.	
textBaseline	The text baseline (determines what the vertical component of <i>origin</i> represents).	
tag	A tag to identify the filled text.	

Definition at line 2590 of file Graphics.cs.

6.14.2.14 FillTextOnPath()

Fill a text string along a GraphicsPath.

Parameters

path	The GraphicsPath along which the text will flow.
text	The string to draw.
font	The font with which to draw the text.
fillColour	The colour to use to fill the text.
reference	The (relative) starting point on the path starting from which the text should be drawn (0 is the start of the path, 1 is the end of the path).
anchor	The anchor in the text string that will correspond to the point specified by the <i>reference</i> .
textBaseline	The text baseline (determines which the position of the text in relation to the path.
tag	A tag to identify the filled text.

Definition at line 2658 of file Graphics.cs.

6.14.2.15 Linearise()

Creates a new Graphics object by linearising all of the elements of the current instance, i.e. replacing curve segments with series of line segments that approximate them. Raster images are left unchanged.

Parameters

resolution	The resolution that will be used to linearise curve segments.

Returns

A new Graphics object containing the linearised elements.

Definition at line 3347 of file Graphics.cs.

6.14.2.16 MeasureText()

Measure a text string. See also

See also

Font.MeasureText(string), Font.MeasureTextAdvanced(string)

and.

Parameters

text	The string to measure.
font	The font to use to measure the string.

Returns

Definition at line 2862 of file Graphics.cs.

6.14.2.17 Restore()

```
void VectSharp.Graphics.Restore ( )
```

Restore the previous transform state (rotation, translation scale).

Definition at line 2878 of file Graphics.cs.

6.14.2.18 Rotate()

Rotate the coordinate system around the origin.

Parameters

	angle	The angle (in radians) by which to rotate the coordinate system.
--	-------	--

Definition at line 2392 of file Graphics.cs.

6.14.2.19 RotateAt()

Rotate the coordinate system around a pivot point.

Parameters

angle	The angle (in radians) by which to rotate the coordinate system.
pivot	The pivot around which the coordinate system is to be rotated.

Definition at line 2402 of file Graphics.cs.

6.14.2.20 Save()

```
void VectSharp.Graphics.Save ( )
```

Save the current transform state (rotation, translation, scale).

Definition at line 2870 of file Graphics.cs.

6.14.2.21 Scale()

```
void VectSharp.Graphics.Scale ( \label{eq:condition} \mbox{double } scaleX, \\ \mbox{double } scaleY \; )
```

Scale the coordinate system with respect to the origin.

Parameters

scaleX	The horizontal scale.
scaleY	The vertical scale.

Definition at line 2449 of file Graphics.cs.

6.14.2.22 SetClippingPath() [1/3]

Intersect the current clipping path with the specified rectangle.

Parameters

<i>leftX</i>	The horizontal coordinate of the top-left corner of the rectangle.
topY	The vertical coordinate of the top-left corner of the rectangle.
width	The width of the rectangle.
height	The height of the rectangle.

Definition at line 2373 of file Graphics.cs.

6.14.2.23 SetClippingPath() [2/3]

Intersect the current clipping path with the specified GraphicsPath.

Parameters

path	The GraphicsPath to intersect with the current clipping path.
------	---

Definition at line 2361 of file Graphics.cs.

6.14.2.24 SetClippingPath() [3/3]

Intersect the current clipping path with the specified rectangle.

Parameters

topLeft	The top-left corner of the rectangle.
size	The size of the rectangle.

Definition at line 2383 of file Graphics.cs.

6.14.2.25 StrokePath()

Stroke a GraphicsPath.

Parameters

path	The GraphicsPath to stroke.
strokeColour	The Colour with which to stroke the GraphicsPath.
lineWidth	The width of the line with which the path is stroked.
lineCap	The line cap to use to stroke the path.
lineJoin	The line join to use to stroke the path.
lineDash	The line dash to use to stroke the path.
tag	A tag to identify the stroked path.

Definition at line 2352 of file Graphics.cs.

6.14.2.26 StrokeRectangle() [1/2]

Stroke a rectangle.

Parameters

leftX	The horizontal coordinate of the top-left corner of the rectangle.
topY	The vertical coordinate of the top-left corner of the rectangle.
width	The width of the rectangle.
height	The height of the rectangle.
strokeColour	The colour with which to stroke the rectangle.
lineWidth	The width of the line with which the rectangle is stroked.
lineCap	The line cap to use to stroke the rectangle.
lineJoin	The line join to use to stroke the rectangle.
lineDash	The line dash to use to stroke the rectangle.
tag	A tag to identify the filled rectangle.

Definition at line 2509 of file Graphics.cs.

6.14.2.27 StrokeRectangle() [2/2]

Stroke a rectangle.

Parameters

topLeft	The top-left corner of the rectangle.
size	The size of the rectangle.
strokeColour	The colour with which to stroke the rectangle.

Parameters

lineWidth	The width of the line with which the rectangle is stroked.
lineCap	The line cap to use to stroke the rectangle.
lineJoin	The line join to use to stroke the rectangle.
lineDash	The line dash to use to stroke the rectangle.
tag	A tag to identify the filled rectangle.

Definition at line 2491 of file Graphics.cs.

6.14.2.28 StrokeText() [1/2]

Stroke a text string.

Parameters

originX	The horizontal coordinate of the text origin.
originY	The vertical coordinate of the text origin. See textBaseline.
text	The string to draw.
font	The font with which to draw the text.
strokeColour	The colour with which to stroke the text.
lineWidth	The width of the line with which the text is stroked.
lineCap	The line cap to use to stroke the text.
lineJoin	The line join to use to stroke the text.
lineDash	The line dash to use to stroke the text.
textBaseline	The text baseline (determines what originY represents).
tag	A tag to identify the stroked text.

Definition at line 2642 of file Graphics.cs.

6.14.2.29 StrokeText() [2/2]

```
string text,
Font font,
Colour strokeColour,
TextBaselines textBaseline = TextBaselines.Top,
double lineWidth = 1,
LineCaps lineCap = LineCaps.Butt,
LineJoins lineJoin = LineJoins.Miter,
LineDash? lineDash = null,
string tag = null)
```

Stroke a text string.

Parameters

origin	The text origin. See textBaseline.
text	The string to draw.
font	The font with which to draw the text.
strokeColour	The colour with which to stroke the text.
lineWidth	The width of the line with which the text is stroked.
lineCap	The line cap to use to stroke the text.
lineJoin	The line join to use to stroke the text.
lineDash	The line dash to use to stroke the text.
textBaseline	The text baseline (determines what the vertical component of <i>origin</i> represents).
tag	A tag to identify the stroked text.

Definition at line 2623 of file Graphics.cs.

6.14.2.30 StrokeTextOnPath()

Stroke a text string along a GraphicsPath.

Parameters

path	The GraphicsPath along which the text will flow.
text	The string to draw.
font	The font with which to draw the text.
strokeColour	The colour with which to stroke the text.

Parameters

lineWidth	The width of the line with which the text is stroked.
lineCap	The line cap to use to stroke the text.
lineJoin	The line join to use to stroke the text.
lineDash	The line dash to use to stroke the text.
reference	The (relative) starting point on the path starting from which the text should be drawn (0 is the start of the path, 1 is the end of the path).
anchor	The anchor in the text string that will correspond to the point specified by the reference.
textBaseline	The text baseline (determines which the position of the text in relation to the path.
tag	A tag to identify the stroked text.

Definition at line 2764 of file Graphics.cs.

6.14.2.31 Transform() [1/2]

Transform the coordinate system with the specified transformation matrix [[a, c, e], [b, d, f], [0, 0, 1]].

Parameters

а	The first element of the first column.
b	The second element of the first column.
С	The first element of the second column.
d	The second element of the second column.
е	The first element of the third column.
f	The second element of the third column.

Definition at line 2419 of file Graphics.cs.

6.14.2.32 Transform() [2/2]

Creates a new Graphics object in which all the graphics actions have been transformed using an arbitrary transformation function. Raster images are replaced by grey rectangles.

Parameters

transformationFunction	An arbitrary transformation function.
linearisationResolution	The resolution that will be used to linearise curve segments.

Returns

A new Graphics object in which all graphics actions have been linearised and transformed using the transformation Function .

Definition at line 3222 of file Graphics.cs.

6.14.2.33 Translate() [1/2]

```
void VectSharp.Graphics.Translate ( \label{eq:condition} \mbox{double } x, \mbox{double } y \mbox{)}
```

Translate the coordinate system origin.

Parameters

Χ	The horizontal translation.
У	The vertical translation.

Definition at line 2430 of file Graphics.cs.

6.14.2.34 Translate() [2/2]

Translate the coordinate system origin.

Parameters

delta	The new origin point.

Definition at line 2439 of file Graphics.cs.

6.14.3 Property Documentation

6.14.3.1 UnbalancedStackAction

UnbalancedStackActions VectSharp.Graphics.UnbalancedStackAction = UnbalancedStackActions.Throw
[static], [get], [set]

Determines how an unbalanced graphics state stack (which occurs if the number of calls to Save and Restore is not equal) will be treated. The default is UnbalancedStackActions.Throw.

Definition at line 2326 of file Graphics.cs.

The documentation for this class was generated from the following file:

· VectSharp/Graphics.cs

6.15 VectSharp.GraphicsPath Class Reference

Represents a graphics path that can be filled or stroked.

Public Member Functions

GraphicsPath MoveTo (Point p)

Move the current point without tracing a segment from the previous point.

GraphicsPath MoveTo (double x, double y)

Move the current point without tracing a segment from the previous point.

GraphicsPath LineTo (Point p)

Move the current point and trace a segment from the previous point.

• GraphicsPath LineTo (double x, double y)

Move the current point and trace a segment from the previous point.

• GraphicsPath Arc (Point center, double radius, double startAngle, double endAngle)

Trace an arc segment from a circle with the specified center and radius, starting at startAngle and ending at endAngle. The current point is updated to the end point of the arc.

GraphicsPath Arc (double centerX, double centerY, double radius, double startAngle, double endAngle)

Trace an arc segment from a circle with the specified center and radius, starting at startAngle and ending at endAngle. The current point is updated to the end point of the arc.

GraphicsPath EllipticalArc (double radiusX, double radiusY, double axisAngle, bool largeArc, bool sweep
 — Clockwise, Point endPoint)

Trace an arc from an ellipse with the specified radii, rotated by axisAngle with respect to the x-axis, starting at the current point and ending at the endPoint.

GraphicsPath CubicBezierTo (Point control1, Point control2, Point endPoint)

Trace a cubic Bezier curve from the current point to a destination point, with two control points. The current point is updated to the end point of the Bezier curve.

GraphicsPath CubicBezierTo (double control1X, double control1Y, double control2X, double control2Y, double endPointX, double endPointY)

Trace a cubic Bezier curve from the current point to a destination point, with two control points. The current point is updated to the end point of the Bezier curve.

• GraphicsPath Close ()

Trace a segment from the current point to the start point of the figure and flag the figure as closed.

• GraphicsPath AddText (double originX, double originY, string text, Font font, TextBaselines text

Baseline=TextBaselines.Top)

Add the contour of a text string to the current path.

- GraphicsPath AddText (Point origin, string text, Font font, TextBaselines textBaseline=TextBaselines.Top)

 Add the contour of a text string to the current path.
- GraphicsPath AddTextOnPath (GraphicsPath path, string text, Font font, double reference=0, TextAnchors anchor=TextAnchors.Left, TextBaselines textBaseline=TextBaselines.Top)

Add the contour of a text string flowing along a GraphicsPath to the current path.

GraphicsPath AddSmoothSpline (params Point[] points)

Adds a smooth spline composed of cubic bezier segments that pass through the specified points.

• double MeasureLength ()

Measures the length of the GraphicsPath.

Point GetPointAtRelative (double position)

Gets the point at the relative position specified on the GraphicsPath.

Point GetPointAtAbsolute (double length)

Gets the point at the absolute position specified on the GraphicsPath.

Point GetTangentAtRelative (double position)

Gets the tangent to the point at the relative position specified on the GraphicsPath.

Point GetTangentAtAbsolute (double length)

Gets the tangent to the point at the absolute position specified on the GraphicsPath.

Point GetNormalAtAbsolute (double length)

Gets the normal to the point at the absolute position specified on the GraphicsPath.

Point GetNormalAtRelative (double position)

Gets the normal to the point at the relative position specified on the GraphicsPath.

GraphicsPath Linearise (double resolution)

Linearises a GraphicsPath, replacing curve segments with series of line segments that approximate them.

IEnumerable < List < Point > > GetPoints ()

Gets a collection of the end points of all the segments in the GraphicsPath, divided by figure.

IEnumerable < List < Point > > GetLinearisationPointsNormals (double resolution)

Gets a collection of the tangents at the end point of the segments in which the GraphicsPath would be linearised, divided by figure.

IEnumerable < GraphicsPath > Triangulate (double resolution, bool clockwise)

Divides a GraphicsPath into triangles.

• GraphicsPath Transform (Func< Point, Point > transformationFunction)

Transforms all of the Points in the GraphicsPath with an arbitrary transformation function.

Properties

List < Segment > Segments = new List < Segment > () [get, set]
 The segments that make up the path.

6.15.1 Detailed Description

Represents a graphics path that can be filled or stroked.

Definition at line 3583 of file Graphics.cs.

6.15.2 Member Function Documentation

6.15.2.1 AddSmoothSpline()

Adds a smooth spline composed of cubic bezier segments that pass through the specified points.

Parameters

points	The points through which the spline should pass.
I	-

Returns

The GraphicsPath, to allow for chained calls.

Definition at line 4034 of file Graphics.cs.

6.15.2.2 AddText() [1/2]

Add the contour of a text string to the current path.

Parameters

originX	The horizontal coordinate of the text origin.	
originY	The vertical coordinate of the text origin. See textBaseline.	
text	The string to draw.	
font	The font with which to draw the text.	
textBaseline	The text baseline (determines what originY represents).	

///

Returns

The GraphicsPath, to allow for chained calls.

Definition at line 3832 of file Graphics.cs.

6.15.2.3 AddText() [2/2]

Add the contour of a text string to the current path.

Parameters

origin	The text origin. See textBaseline.	
text	The string to draw.	
font	The font with which to draw the text.	
textBaseline	The text baseline (determines what the vertical component of <i>origin</i> represents).	

Returns

The GraphicsPath, to allow for chained calls.

Definition at line 3845 of file Graphics.cs.

6.15.2.4 AddTextOnPath()

Add the contour of a text string flowing along a GraphicsPath to the current path.

Parameters

path	The GraphicsPath along which the text will flow.	
text	The string to draw.	
font	The font with which to draw the text.	
reference	The (relative) starting point on the path starting from which the text should be drawn (0 is the start of the path, 1 is the end of the path).	
anchor	The anchor in the text string that will correspond to the point specified by the <i>reference</i> .	
textBaseline	The text baseline (determines which the position of the text in relation to the path.	

Returns

The GraphicsPath, to allow for chained calls.

Definition at line 3922 of file Graphics.cs.

6.15.2.5 Arc() [1/2]

```
double centerY,
double radius,
double startAngle,
double endAngle )
```

Trace an arc segment from a circle with the specified center and *radius*, starting at *startAngle* and ending at *endAngle*. The current point is updated to the end point of the arc.

Parameters

centerX	The horizontal coordinate of the center of the arc.
centerY	The vertical coordinate of the center of the arc.
radius	The radius of the arc.
startAngle	The start angle (in radians) of the arc.
endAngle	The end angle (in radians) of the arc.

Returns

The GraphicsPath, to allow for chained calls.

Definition at line 3673 of file Graphics.cs.

6.15.2.6 Arc() [2/2]

Trace an arc segment from a circle with the specified *center* and *radius*, starting at *startAngle* and ending at *endAngle*. The current point is updated to the end point of the arc.

Parameters

center	The center of the arc.
radius	The radius of the arc.
startAngle	The start angle (in radians) of the arc.
endAngle	The end angle (in radians) of the arc.

Returns

The GraphicsPath, to allow for chained calls.

Definition at line 3653 of file Graphics.cs.

6.15.2.7 Close()

```
GraphicsPath VectSharp.GraphicsPath.Close ( )
```

Trace a segment from the current point to the start point of the figure and flag the figure as closed.

Returns

The GraphicsPath, to allow for chained calls.

Definition at line 3817 of file Graphics.cs.

6.15.2.8 CubicBezierTo() [1/2]

Trace a cubic Bezier curve from the current point to a destination point, with two control points. The current point is updated to the end point of the Bezier curve.

Parameters

control1X	The horizontal coordinate of the first control point.
control1Y	The vertical coordinate of the first control point.
control2X	The horizontal coordinate of the second control point.
control2Y	The vertical coordinate of the second control point.
endPointX	The horizontal coordinate of the destination point.
endPointY	The vertical coordinate of the destination point.

Returns

The GraphicsPath, to allow for chained calls.

Definition at line 3807 of file Graphics.cs.

6.15.2.9 CubicBezierTo() [2/2]

Trace a cubic Bezier curve from the current point to a destination point, with two control points. The current point is updated to the end point of the Bezier curve.

Parameters

control1	The first control point.
control2	The second control point.
endPoint	The destination point.

Returns

The GraphicsPath, to allow for chained calls.

Definition at line 3786 of file Graphics.cs.

6.15.2.10 EllipticalArc()

Trace an arc from an ellipse with the specified radii, rotated by *axisAngle* with respect to the x-axis, starting at the current point and ending at the *endPoint*.

Parameters

radiusX	The horizontal radius of the ellipse.
radiusY	The vertical radius of the ellipse.
axisAngle	The angle of the horizontal axis of the ellipse with respect to the horizontal axis.
largeArc	Determines whether the large or the small arc is drawn.
sweepClockwise	Determines whether the clockwise or anticlockwise arc is drawn.
endPoint	The end point of the arc.

Returns

Definition at line 3689 of file Graphics.cs.

6.15.2.11 GetLinearisationPointsNormals()

Gets a collection of the tangents at the end point of the segments in which the GraphicsPath would be linearised, divided by figure.

Parameters

resolution	The absolute length between successive samples in curve segments.

Returns

A collection of the tangents at the end point of the segments in which the GraphicsPath would be linearised, divided by figure.

Definition at line 4828 of file Graphics.cs.

6.15.2.12 GetNormalAtAbsolute()

```
Point VectSharp.GraphicsPath.GetNormalAtAbsolute ( \label{eq:condition} \mbox{double } length \ )
```

Gets the normal to the point at the absolute position specified on the GraphicsPath.

Parameters

Returns

The normal to the point at the specified position.

Definition at line 4733 of file Graphics.cs.

6.15.2.13 GetNormalAtRelative()

Gets the normal to the point at the relative position specified on the GraphicsPath.

Parameters

position The position on the GraphicsPath (0 is the start of the path, 1 is the end of the path).

Returns

The normal to the point at the specified position.

Definition at line 4744 of file Graphics.cs.

6.15.2.14 GetPointAtAbsolute()

Gets the point at the absolute position specified on the GraphicsPath.

Parameters

length	The distance to the point from the start of the GraphicsPath.
--------	---

Returns

The point at the specified position.

Definition at line 4149 of file Graphics.cs.

6.15.2.15 GetPointAtRelative()

Gets the point at the relative position specified on the GraphicsPath.

Parameters

position The position on the GraphicsPath (0 is the start of the path, 1 is the end of the path).

Returns

The point at the specified position.

Definition at line 4139 of file Graphics.cs.

6.15.2.16 GetPoints()

Gets a collection of the end points of all the segments in the GraphicsPath, divided by figure.

Returns

A collection of the end points of all the segments in the GraphicsPath, divided by figure.

Definition at line 4783 of file Graphics.cs.

6.15.2.17 GetTangentAtAbsolute()

```
Point VectSharp.GraphicsPath.GetTangentAtAbsolute ( {\tt double} \  \, length \ )
```

Gets the tangent to the point at the absolute position specified on the GraphicsPath.

Parameters

ength The distance to the point from the s	start of the GraphicsPath.
--	----------------------------

Returns

The tangent to the point at the specified position.

Definition at line 4446 of file Graphics.cs.

6.15.2.18 GetTangentAtRelative()

Gets the tangent to the point at the relative position specified on the GraphicsPath.

Parameters

position	The position on the GraphicsPath (0 is the start of the path, 1 is the end of the path).

Returns

The tangent to the point at the specified position.

Definition at line 4436 of file Graphics.cs.

6.15.2.19 Linearise()

Linearises a GraphicsPath, replacing curve segments with series of line segments that approximate them.

Parameters

Returns

A GraphicsPath composed only of linear segments that approximates the current GraphicsPath.

Definition at line 4755 of file Graphics.cs.

6.15.2.20 LineTo() [1/2]

Move the current point and trace a segment from the previous point.

Parameters

	The horizontal coordinate of the new point.
У	The vertical coordinate of the new point.

Returns

The GraphicsPath, to allow for chained calls.

Definition at line 3638 of file Graphics.cs.

6.15.2.21 LineTo() [2/2]

```
\begin{tabular}{ll} $\tt GraphicsPath.LineTo. ( \\ &\tt Point.p.) \end{tabular}
```

Move the current point and trace a segment from the previous point.

Parameters

Returns

The GraphicsPath, to allow for chained calls.

Definition at line 3619 of file Graphics.cs.

6.15.2.22 MeasureLength()

```
double VectSharp.GraphicsPath.MeasureLength ( )
```

Measures the length of the GraphicsPath.

Returns

The length of the GraphicsPath

Definition at line 4067 of file Graphics.cs.

6.15.2.23 MoveTo() [1/2]

Move the current point without tracing a segment from the previous point.

Parameters

X	The horizontal coordinate of the new point.	
У	The vertical coordinate of the new point.	

Returns

The GraphicsPath, to allow for chained calls.

Definition at line 3608 of file Graphics.cs.

6.15.2.24 MoveTo() [2/2]

```
\begin{tabular}{lll} $\tt GraphicsPath.MoveTo. ( \\ &\tt Point.p.) \end{tabular}
```

Move the current point without tracing a segment from the previous point.

Parameters

p The new point.

Returns

The GraphicsPath, to allow for chained calls.

Definition at line 3596 of file Graphics.cs.

6.15.2.25 Transform()

Transforms all of the Points in the GraphicsPath with an arbitrary transformation function.

Parameters

transformationFunction	An arbitrary transformation function.	
------------------------	---------------------------------------	--

Returns

A new GraphicsPath in which all points have been replaced using the transformationFunction.

Definition at line 5900 of file Graphics.cs.

6.15.2.26 Triangulate()

Divides a GraphicsPath into triangles.

Parameters

resolution	The resolution that will be used to linearise curve segments in the GraphicsPath.
clockwise	If this is true, the triangles will have their vertices in a clockwise order, otherwise they will be in
	anticlockwise order.

Returns

A collection of distinct GraphicsPaths, each representing one triangle.

Definition at line 4911 of file Graphics.cs.

6.15.3 Property Documentation

6.15.3.1 Segments

```
List<Segment> VectSharp.GraphicsPath.Segments = new List<Segment>() [get], [set]
```

The segments that make up the path.

Definition at line 3588 of file Graphics.cs.

The documentation for this class was generated from the following file:

· VectSharp/Graphics.cs

6.16 VectSharp.Markdown.HTTPUtils Class Reference

Contains utilities to resolve absolute and relative URIs.

Static Public Attributes

· static string path

Resolves an image Uri, by downloading the image file if necessary. It also takes care of ensuring that the file extension matches the format of the file.

Properties

• static bool LogDownloads = true [get, set]

Determines whether every file that is downloaded should be logged to the standard error stream.

6.16.1 Detailed Description

Contains utilities to resolve absolute and relative URIs.

Definition at line 227 of file HtmlTag.cs.

6.16.2 Member Data Documentation

6.16.2.1 path

```
string VectSharp.Markdown.HTTPUtils.path [static]
```

Resolves an image Uri, by downloading the image file if necessary. It also takes care of ensuring that the file extension matches the format of the file.

Parameters

uri	The address of the image.
baseUriString	The base uri to use for relative uris.

Returns

A tuple containing the local path of the image file (either the original image, or a local copy of a remote file) and a boolean value indicating whether the image was fetched from a remote location and should be deleted after the program is done with it.

Definition at line 240 of file HtmlTag.cs.

6.16.3 Property Documentation

6.16.3.1 LogDownloads

```
bool VectSharp.Markdown.HTTPUtils.LogDownloads = true [static], [get], [set]
```

Determines whether every file that is downloaded should be logged to the standard error stream.

Definition at line 232 of file HtmlTag.cs.

The documentation for this class was generated from the following file:

· VectSharp.Markdown/HtmlTag.cs

6.17 VectSharp.IGraphicsContext Interface Reference

This interface should be implemented by classes intended to provide graphics output capability to a Graphics object.

Public Member Functions

• void Save ()

Save the current transform state (rotation, translation, scale). This should be implemented as a LIFO stack.

• void Restore ()

Restore the previous transform state (rotation, translation, scale). This should be implemented as a LIFO stack.

• void Translate (double x, double y)

Translate the coordinate system origin.

void Rotate (double angle)

Rotate the coordinate system around the origin.

void Scale (double scaleX, double scaleY)

Scale the coordinate system with respect to the origin.

void Transform (double a, double b, double c, double d, double e, double f)

Transform the coordinate system with the specified transformation matrix [[a, c, e], [b, d, f], [0, 0, 1]].

void FillText (string text, double x, double y)

Fill a text string using the current Font and TextBaseline.

void StrokeText (string text, double x, double y)

Stroke the outline of a text string using the current Font and TextBaseline.

• void MoveTo (double x, double y)

Change the current point without drawing a line from the previous point. If necessary, start a new figure.

void LineTo (double x, double y)

Draw a line from the previous point to the specified point.

· void Close ()

Close the current figure.

· void Stroke ()

Stroke the current path using the current StrokeStyle, LineWidth, LineCap, LineJoin and LineDash.

void SetClippingPath ()

Set the current clipping path as the intersection of the previous clipping path and the current path.

• void SetFillStyle ((int r, int g, int b, double a) style)

Set the current FillStyle.

• void SetFillStyle (Colour style)

Set the current FillStyle.

void SetStrokeStyle ((int r, int g, int b, double a) style)

Set the current StrokeStyle.

void SetStrokeStyle (Colour style)

Set the current StrokeStyle.

void CubicBezierTo (double p1X, double p1Y, double p2X, double p2Y, double p3X, double p3Y)

Add to the current figure a cubic Bezier from the current point to a destination point, with two control points.

• void Rectangle (double x0, double y0, double width, double height)

Add a rectangle figure to the current path.

• void Fill ()

Fill the current path using the current FillStyle.

· void SetLineDash (LineDash dash)

Set the current line dash pattern.

 void DrawRasterImage (int sourceX, int sourceY, int sourceWidth, int sourceHeight, double destinationX, double destinationY, double destinationWidth, double destinationHeight, RasterImage image)

Draw a raster image.

Properties

```
• double Width [get]
```

Width of the graphic surface.

• double Height [get]

Height of the graphic surface.

• Font Font [get, set]

The current font.

• TextBaselines TextBaseline [get, set]

The current text baseline.

Colour FillStyle [get]

Current colour used to fill paths.

• Colour StrokeStyle [get]

Current colour used to stroke paths.

• double LineWidth [get, set]

Current line width used to stroke paths.

```
• LineCaps LineCap [set]
```

Current line cap used to stroke paths.

• LineJoins LineJoin [set]

Current line join used to stroke paths.

• string Tag [get, set]

The current tag. How this can be used depends on each implementation.

6.17.1 Detailed Description

This interface should be implemented by classes intended to provide graphics output capability to a Graphics object.

Definition at line 2081 of file Graphics.cs.

6.17.2 Member Function Documentation

6.17.2.1 Close()

```
void VectSharp.IGraphicsContext.Close ( )
```

Close the current figure.

6.17.2.2 CubicBezierTo()

Add to the current figure a cubic Bezier from the current point to a destination point, with two control points.

Parameters

p1X	The horizontal coordinate of the first control point.
p1Y	The vertical coordinate of the first control point.
p2X	The horizontal coordinate of the second control point.
p2Y	The vertical coordinate of the second control point.
рЗХ	The horizontal coordinate of the destination point.
рЗҮ	The vertical coordinate of the destination point.

6.17.2.3 DrawRasterImage()

```
void VectSharp.IGraphicsContext.DrawRasterImage (
    int sourceX,
    int sourceY,
    int sourceWidth,
    int sourceHeight,
    double destinationX,
    double destinationY,
    double destinationWidth,
    double destinationHeight,
    RasterImage image )
```

Draw a raster image.

Parameters

sourceX	The horizontal coordinate of the top-left corner of the rectangle delimiting the source area of the image.
sourceY	The vertical coordinate of the top-left corner of the rectangle delimiting the source area of the image.
sourceWidth	The width of the rectangle delimiting the source area of the image.
sourceHeight	The height of the rectangle delimiting the source area of the image.
destinationX	The horizontal coordinate of the top-left corner of the rectangle delimiting the destination area of the image.
destinationY	The vertical coordinate of the top-left corner of the rectangle delimiting the destination area of the image.
destinationWidth	The width of the rectangle delimiting the destination area of the image.
destinationHeight	The height of the rectangle delimiting the destination area of the image.
image	The image to draw.

6.17.2.4 Fill()

```
void VectSharp.IGraphicsContext.Fill ( )
```

Fill the current path using the current FillStyle.

6.17.2.5 FillText()

```
void VectSharp.IGraphicsContext.FillText ( string \ text, double \ x, double \ y \ )
```

Fill a text string using the current Font and TextBaseline.

Parameters

text	The string to draw.
Х	The horizontal coordinate of the text origin.
У	The vertical coordinate of the text origin.

6.17.2.6 LineTo()

```
void VectSharp.IGraphicsContext.LineTo ( \label{eq:context} \mbox{double } x, \mbox{double } y \; )
```

Draw a line from the previous point to the specified point.

Parameters

X	The horizontal coordinate of the point	
У	The vertical coordinate of the point.	

6.17.2.7 MoveTo()

```
void VectSharp.IGraphicsContext.MoveTo ( \label{eq:context} \mbox{double } x, \mbox{double } y \mbox{)}
```

Change the current point without drawing a line from the previous point. If necessary, start a new figure.

Parameters

λ	(The horizontal coordinate of the point.
y	/	The vertical coordinate of the point.

6.17.2.8 Rectangle()

```
void VectSharp.IGraphicsContext.Rectangle ( double x0, double y0, double width, double height )
```

Add a rectangle figure to the current path.

Parameters

x0	The horizontal coordinate of the top-left corner of the rectangle.
y0	The vertical coordinate of the top-left corner of the rectangle.
width	The width of corner of the rectangle.
height	The height of corner of the rectangle.

6.17.2.9 Restore()

```
void VectSharp.IGraphicsContext.Restore ( )
```

Restore the previous transform state (rotation, translation, scale). This should be implemented as a LIFO stack.

6.17.2.10 Rotate()

Rotate the coordinate system around the origin.

Parameters

angle	The angle (in radians) by which to rotate the coordinate system.

6.17.2.11 Save()

```
void VectSharp.IGraphicsContext.Save ( )
```

Save the current transform state (rotation, translation, scale). This should be implemented as a LIFO stack.

6.17.2.12 Scale()

Scale the coordinate system with respect to the origin.

Parameters

scaleX	The horizontal scale.
scaleY	The vertical scale.

6.17.2.13 SetClippingPath()

```
void VectSharp.IGraphicsContext.SetClippingPath ( )
```

Set the current clipping path as the intersection of the previous clipping path and the current path.

6.17.2.14 SetFillStyle() [1/2]

```
void VectSharp.IGraphicsContext.SetFillStyle (  ( \mbox{int r, int g, int b, double a}) \ style \ ) \\
```

Set the current FillStyle.

Parameters

style A ValueTuple<Int32, Int32, Int32, Double> containing component information for the colour. For r, g, and b, range: [0, 255]; for a, range: [0, 1].

6.17.2.15 SetFillStyle() [2/2]

```
void VectSharp.IGraphicsContext.SetFillStyle ( {\tt Colour} \ style \ )
```

Set the current FillStyle.

Parameters

```
style The new fill style.
```

6.17.2.16 SetLineDash()

Set the current line dash pattern.

Parameters

dash The line dash pattern.

6.17.2.17 SetStrokeStyle() [1/2]

Set the current StrokeStyle.

Parameters

style A ValueTuple<Int32, Int32, Int32, Double> containing component information for the colour. For r, g, and b, range: [0, 255]; for a, range: [0, 1].

6.17.2.18 SetStrokeStyle() [2/2]

Set the current StrokeStyle.

Parameters

style The new stroke style.

6.17.2.19 Stroke()

```
void VectSharp.IGraphicsContext.Stroke ( )
```

Stroke the current path using the current StrokeStyle, LineWidth, LineCap, LineJoin and LineDash.

6.17.2.20 StrokeText()

```
void VectSharp.IGraphicsContext.StrokeText ( string \ text, double \ x, double \ y \ )
```

Stroke the outline of a text string using the current Font and TextBaseline.

Parameters

text	The string to draw.
X	The horizontal coordinate of the text origin.
У	The vertical coordinate of the text origin.

6.17.2.21 Transform()

Transform the coordinate system with the specified transformation matrix [[a, c, e], [b, d, f], [0, 0, 1]].

Parameters

а	The first element of the first column.
b	The second element of the first column.
С	The first element of the second column.
d	The second element of the second column.
е	The first element of the third column.
f	The second element of the third column.

6.17.2.22 Translate()

```
void VectSharp.IGraphicsContext.Translate ( \label{eq:context} \mbox{double } x, \mbox{double } y \; )
```

Translate the coordinate system origin.

Parameters

X	The horizontal translation.
У	The vertical translation.

6.17.3 Property Documentation

6.17.3.1 FillStyle

```
Colour VectSharp.IGraphicsContext.FillStyle [get]
```

Current colour used to fill paths.

Definition at line 2192 of file Graphics.cs.

6.17.3.2 Font

```
Font VectSharp.IGraphicsContext.Font [get], [set]
```

The current font.

Definition at line 2137 of file Graphics.cs.

6.17.3.3 Height

```
double VectSharp.IGraphicsContext.Height [get]
```

Height of the graphic surface.

Definition at line 2091 of file Graphics.cs.

6.17.3.4 LineCap

```
LineCaps VectSharp.IGraphicsContext.LineCap [set]
```

Current line cap used to stroke paths.

Definition at line 2256 of file Graphics.cs.

6.17.3.5 LineJoin

```
LineJoins VectSharp.IGraphicsContext.LineJoin [set]
```

Current line join used to stroke paths.

Definition at line 2261 of file Graphics.cs.

6.17.3.6 LineWidth

```
double VectSharp.IGraphicsContext.LineWidth [get], [set]
```

Current line width used to stroke paths.

Definition at line 2251 of file Graphics.cs.

6.17.3.7 StrokeStyle

```
Colour VectSharp.IGraphicsContext.StrokeStyle [get]
```

Current colour used to stroke paths.

Definition at line 2209 of file Graphics.cs.

6.17.3.8 Tag

```
string VectSharp.IGraphicsContext.Tag [get], [set]
```

The current tag. How this can be used depends on each implementation.

Definition at line 2272 of file Graphics.cs.

6.17.3.9 TextBaseline

```
TextBaselines VectSharp.IGraphicsContext.TextBaseline [get], [set]
```

The current text baseline.

Definition at line 2142 of file Graphics.cs.

6.17.3.10 Width

```
double VectSharp.IGraphicsContext.Width [get]
```

Width of the graphic surface.

Definition at line 2086 of file Graphics.cs.

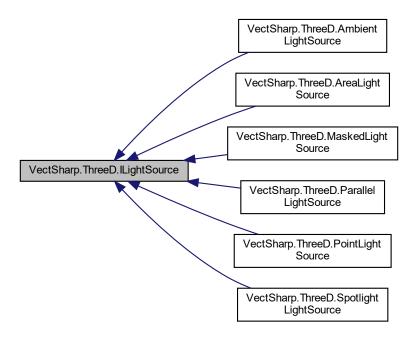

The documentation for this interface was generated from the following file:

· VectSharp/Graphics.cs

6.18 VectSharp.ThreeD.ILightSource Interface Reference

Represents a light source.

Inheritance diagram for VectSharp.ThreeD.ILightSource:

Public Member Functions

- LightIntensity GetLightAt (Point3D point)
 - Computes the light intensity at the specified point, without taking into account any obstructions.
- double GetObstruction (Point3D point, IEnumerable < Triangle3DElement > shadowingTriangles)

Determines the amount of obstruction of the light that results at point due to the specified shadowing Triangles .

Properties

bool CastsShadow [get]

Determines whether the light casts a shadow or not.

6.18.1 Detailed Description

Represents a light source.

Definition at line 48 of file Lights.cs.

6.18.2 Member Function Documentation

6.18.2.1 GetLightAt()

Computes the light intensity at the specified point, without taking into account any obstructions.

Parameters

point The Point3DElement at which the light intensity should be comput	ed.
--	-----

Returns

Implemented in VectSharp.ThreeD.AreaLightSource, VectSharp.ThreeD.MaskedLightSource, VectSharp.ThreeD.SpotlightLightSource, VectSharp.ThreeD.ParallelLightSource, and VectSharp.ThreeD.AmbientLightSource.

6.18.2.2 GetObstruction()

Determines the amount of obstruction of the light that results at point due to the specified shadowing Triangles.

Parameters

point	The Point3D at which the obstruction should be computed.
shadowingTriangles	A collection of Triangle3DElement casting shadows.

Returns

1 if the light is completely obstructed, 0 if the light is completely visible, a value between these if the light is partially obstructed.

Implemented in VectSharp.ThreeD.AreaLightSource, VectSharp.ThreeD.MaskedLightSource, VectSharp.ThreeD.SpotlightLightSource, VectSharp.ThreeD.ParallelLightSource, and VectSharp.ThreeD.AmbientLightSource.

6.18.3 Property Documentation

6.18.3.1 CastsShadow

```
bool VectSharp.ThreeD.ILightSource.CastsShadow [get]
```

Determines whether the light casts a shadow or not.

Definition at line 60 of file Lights.cs.

The documentation for this interface was generated from the following file:

· VectSharp.ThreeD/Lights.cs

6.19 VectSharp.MuPDFUtils.ImageURIParser Class Reference

Provides a method to parse an image URI into a page.

Static Public Member Functions

• static Func< string, bool, Page > Parser (Func< string, bool, Page > parseSVG)

Parses an image URI into a page. This is intended to replace the default image URI interpreter in VectSharp.SVG.Parser.ParseImageURI. To do this, use something like:

6.19.1 Detailed Description

Provides a method to parse an image URI into a page.

Definition at line 29 of file ImageURIParser.cs.

6.19.2 Member Function Documentation

6.19.2.1 Parser()

```
static Func<string, bool, Page> VectSharp.MuPDFUtils.ImageURIParser.Parser ( Func< \ string, \ bool, \ Page> parseSVG \ ) \quad [static]
```

Parses an image URI into a page. This is intended to replace the default image URI interpreter in VectSharp.SVG.Parser.ParseImageURI. To do this, use something like:

VectSharp.SVG.Parser.ParseImageURI = VectSharp.MuPDFUtils.ImageURIParser.Parser(VectSharp.

Parameters

parseSVG	A function to parse an SVG image uri into a page. You should pass
	VectSharp.SVG.Parser.ParseSVGURI as this argument.

Returns

A function to parse an image URI into a page.

Definition at line 37 of file ImageURIParser.cs.

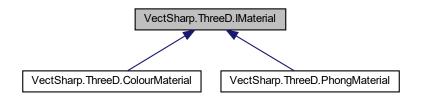

The documentation for this class was generated from the following file:

· VectSharp.MuPDFUtils/ImageURIParser.cs

6.20 VectSharp.ThreeD.IMaterial Interface Reference

Represents a material used to the determine the appearance of Triangle3DElement.

Inheritance diagram for VectSharp. Three D.I Material:

Public Member Functions

Colour GetColour (Point3D point, NormalizedVector3D surfaceNormal, Camera camera, IList< ILightSource
 <p>lights, IList< double > obstructions)
 Obtains the Colour at the specified point.

6.20.1 Detailed Description

Represents a material used to the determine the appearance of Triangle3DElement.

Definition at line 14 of file Materials.cs.

6.20.2 Member Function Documentation

6.20.2.1 GetColour()

Obtains the Colour at the specified point.

Parameters

point	The point whose colour should be determined.
surfaceNormal	The normal to the surface at the specified <i>point</i> .
camera	The camera being used to render the scene.
lights	A list of light sources that are present in the scene.
obstructions	A list of values indicating how obstructed each light source is.

Returns

The Colour of the specified point.

Implemented in VectSharp.ThreeD.PhongMaterial, and VectSharp.ThreeD.ColourMaterial.

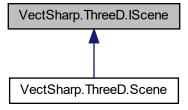

The documentation for this interface was generated from the following file:

· VectSharp.ThreeD/Materials.cs

6.21 VectSharp.ThreeD.IScene Interface Reference

Represents a 3D scene.

Inheritance diagram for VectSharp.ThreeD.IScene:

Public Member Functions

• void AddElement (Element3D element)

Adds the specified element to the scene.

void AddRange (IEnumerable < Element3D > elements)

Adds the specified elements to the scene.

void Replace (Func< Element3D, Element3D > replacementFunction)

Replaces each element in the scene with the element returned by the replacementFunction .

void Replace (Func< Element3D, IEnumerable< Element3D >> replacementFunction)

 $Replaces\ each\ element\ in\ the\ scene\ with\ the\ element(s)\ returned\ by\ the\ replacement Function\ .$

Properties

```
• IEnumerable < Element3D > SceneElements [get]

The Element3Ds constituting the scene.
```

• object SceneLock [get]

An object used to synchronise multithreaded rendering of the same scene.

6.21.1 Detailed Description

Represents a 3D scene.

Definition at line 9 of file Scene.cs.

6.21.2 Member Function Documentation

6.21.2.1 AddElement()

Adds the specified *element* to the scene.

Parameters

ment3D to add.	element
----------------	---------

Implemented in VectSharp.ThreeD.Scene.

6.21.2.2 AddRange()

Adds the specified *elements* to the scene.

Parameters

elements	A collection of Element3Ds to add.	_
eiements	A collection of Element3Ds to	add.

Implemented in VectSharp.ThreeD.Scene.

6.21.2.3 Replace() [1/2]

```
void VectSharp.ThreeD.IScene.Replace ( \label{eq:punc} {\tt Func} < {\tt Element3D}, \ {\tt Element3D} > {\tt replacementFunction} \ )
```

Replaces each element in the scene with the element returned by the *replacementFunction* .

Parameters

replacementFunction A function replacing each Element3D in the scene with another Element
--

Implemented in VectSharp.ThreeD.Scene.

6.21.2.4 Replace() [2/2]

Replaces each element in the scene with the element(s) returned by the replacementFunction .

Parameters

Implemented in VectSharp.ThreeD.Scene.

6.21.3 Property Documentation

6.21.3.1 SceneElements

```
IEnumerable<Element3D> VectSharp.ThreeD.IScene.SceneElements [get]
```

The Element3Ds constituting the scene.

Definition at line 14 of file Scene.cs.

6.21.3.2 SceneLock

```
object VectSharp.ThreeD.IScene.SceneLock [get]
```

An object used to synchronise multithreaded rendering of the same scene.

Definition at line 43 of file Scene.cs.

The documentation for this interface was generated from the following file:

VectSharp.ThreeD/Scene.cs

6.22 VectSharp.ThreeD.LightIntensity Struct Reference

Represents the intensity of a light source at a particular point.

Public Member Functions

• LightIntensity (double intensity, NormalizedVector3D direction)

Creates a new LightIntensity.

· void Deconstruct (out double intensity, out NormalizedVector3D direction)

Deconstructs the struct.

Public Attributes

· double Intensity

The intensity of the light.

• NormalizedVector3D Direction

The direction towards from which the light comes.

6.22.1 Detailed Description

Represents the intensity of a light source at a particular point.

Definition at line 10 of file Lights.cs.

6.22.2 Constructor & Destructor Documentation

6.22.2.1 LightIntensity()

Creates a new LightIntensity.

Parameters

intensity	The intensity of the light.
direction	The direction from which the light comes.

Definition at line 27 of file Lights.cs.

6.22.3 Member Function Documentation

6.22.3.1 Deconstruct()

Deconstructs the struct.

Parameters

intensity	This parameter will hold the Intensity of the light.
direction	This parameter will hold the Direction of the light.

Definition at line 38 of file Lights.cs.

6.22.4 Member Data Documentation

6.22.4.1 Direction

NormalizedVector3D VectSharp.ThreeD.LightIntensity.Direction

The direction towards from which the light comes.

Definition at line 20 of file Lights.cs.

6.22.4.2 Intensity

double VectSharp.ThreeD.LightIntensity.Intensity

The intensity of the light.

Definition at line 15 of file Lights.cs.

The documentation for this struct was generated from the following file:

VectSharp.ThreeD/Lights.cs

6.23 VectSharp.LineDash Struct Reference

Represents instructions on how to paint a dashed line.

Public Member Functions

• LineDash (double unitsOn, double unitsOff, double phase)

Define a new line dash pattern.

Public Attributes

• double UnitsOn

Length of the "on" (painted) segment.

double UnitsOff

Length of the "off" (not painted) segment.

· double Phase

Position in the dash pattern at which the line starts.

Static Public Attributes

```
    static LineDash SolidLine = new LineDash(0, 0, 0)
    A solid (not dashed) line
```

6.23.1 Detailed Description

Represents instructions on how to paint a dashed line.

Definition at line 130 of file Graphics.cs.

6.23.2 Constructor & Destructor Documentation

6.23.2.1 LineDash()

Define a new line dash pattern.

Parameters

unitsOn	The length of the "on" (painted) segment.
unitsOff	The length of the "off" (not painted) segment.
phase	The position in the dash pattern at which the line starts.

Definition at line 158 of file Graphics.cs.

6.23.3 Member Data Documentation

6.23.3.1 Phase

```
double VectSharp.LineDash.Phase
```

Position in the dash pattern at which the line starts.

Definition at line 150 of file Graphics.cs.

6.23.3.2 SolidLine

```
LineDash VectSharp.LineDash.SolidLine = new LineDash(0, 0, 0) [static]
```

A solid (not dashed) line

Definition at line 135 of file Graphics.cs.

6.23.3.3 UnitsOff

```
double VectSharp.LineDash.UnitsOff
```

Length of the "off" (not painted) segment.

Definition at line 145 of file Graphics.cs.

6.23.3.4 UnitsOn

```
double VectSharp.LineDash.UnitsOn
```

Length of the "on" (painted) segment.

Definition at line 140 of file Graphics.cs.

The documentation for this struct was generated from the following file:

VectSharp/Graphics.cs

6.24 VectSharp.Markdown.Margins Class Reference

Represents the margins of a page.

Public Member Functions

Margins (double left, double top, double right, double bottom)
 Creates a new Margins instance.

Properties

```
    double Left [get]
        The left margin.
    double Right [get]
        The right margin.
    double Top [get]
        The top margin.
    double Bottom [get]
        The bottom margin.
```

6.24.1 Detailed Description

Represents the margins of a page.

Definition at line 168 of file MarkdownContext.cs.

6.24.2 Constructor & Destructor Documentation

6.24.2.1 Margins()

Creates a new Margins instance.

Parameters

left	The left margin.
top	The top margin.
right	The right margin.
bottom	The bottom margin.

Definition at line 197 of file MarkdownContext.cs.

6.24.3 Property Documentation

6.24.3.1 Bottom

```
double VectSharp.Markdown.Margins.Bottom [get]
```

The bottom margin.

Definition at line 188 of file MarkdownContext.cs.

6.24.3.2 Left

```
double VectSharp.Markdown.Margins.Left [get]
```

The left margin.

Definition at line 173 of file MarkdownContext.cs.

6.24.3.3 Right

```
double VectSharp.Markdown.Margins.Right [get]
```

The right margin.

Definition at line 178 of file MarkdownContext.cs.

6.24.3.4 Top

```
double VectSharp.Markdown.Margins.Top [get]
```

The top margin.

Definition at line 183 of file MarkdownContext.cs.

The documentation for this class was generated from the following file:

· VectSharp.Markdown/MarkdownContext.cs

6.25 VectSharp.Markdown.MarkdownRenderer Class Reference

Renders Markdown documents into VectSharp graphics objects.

Public Types

enum VerticalAlignment { VerticalAlignment.Top, VerticalAlignment.Middle, VerticalAlignment.Bottom }
 Defines the options for the vertical alignment of table cells.

Public Member Functions

Page RenderSinglePage (string markdownSource, double width, out Dictionary< string, string > link←
Destinations)

Parses the supplied markdownSource using all the supported extensions and renders the resulting document. Page breaks are disabled, and the document is rendered as a single page with the specified width . The page will be cropped at the appropriate height to contain the entire document.

 Page RenderSinglePage (MarkdownDocument markdownDocument, double width, out Dictionary< string, string > linkDestinations)

Renders the supplied markdownDocument . Page breaks are disabled, and the document is rendered as a single page with the specified width . The page will be cropped at the appropriate height to contain the entire document.

Document Render (string markdownSource, out Dictionary < string, string > linkDestinations)

Parses the supplied markdownSource using all the supported extensions and renders the resulting document. The Document produced consists of one or more pages of the size specified in the PageSize of the current instance.

Document Render (MarkdownDocument mardownDocument, out Dictionary< string, string > link

 Destinations)

Renders the supplied mardownDocument . The Document produced consists of one or more pages of the size specified in the PageSize of the current instance.

Properties

• double BaseFontSize = 9.71424 [get, set]

The base font size to use when rendering the document. This will be the size of regular elements, and the size of header elements will be expressed as a multiple of this.

• double[] HeaderFontSizeMultipliers [get]

The font size for elements at each header level. The values in this array will be multiplied by the BaseFontSize.

• double[] HeaderLineThicknesses = new double[] { 1, 1, 0, 0, 0, 0 } [get]

The thickness of the separator line after a header of each level. A value of 0 disables the line after headers of that level.

double ThematicBreakThickness = 2 [get, set]

The thickness of thematic break lines.

• FontFamily RegularFontFamily = new FontFamily(FontFamily.StandardFontFamilies.Helvetica) [get, set]

The font family for regular text.

FontFamily BoldFontFamily = new FontFamily(FontFamily.StandardFontFamilies.HelveticaBold) [get, set]

The font family for bold text.

• FontFamily ItalicFontFamily = new FontFamily(FontFamily.StandardFontFamilies.HelveticaOblique) [get, set]

The font family for italic text.

• FontFamily BoldItalicFontFamily = new FontFamily(FontFamily.StandardFontFamilies.HelveticaBoldOblique)
[get, set]

The font family for bold italic text.

FontFamily CodeFont = new FontFamily(FontFamily.StandardFontFamilies.Courier) [get, set]

The font family for code elements.

• FontFamily CodeFontBold = new FontFamily(FontFamily.StandardFontFamilies.CourierBold) [get, set]

The font family for bold code elements.

FontFamily CodeFontItalic = new FontFamily(FontFamily.StandardFontFamilies.CourierOblique) [get, set]

The font family for italic code elements.

• FontFamily CodeFontBoldItalic = new FontFamily(FontFamily.StandardFontFamilies.CourierBoldOblique) [get, set]

The font family for bold italic code elements.

double UnderlineThickness = 0.075 [get, set]

The thickness of underlines. This value will be multiplied by the font size of the element being underlined.

• double BoldUnderlineThickness = 0.15 [get, set]

The thickness of underlines for bold text. This value will be multiplied by the font size of the element being underlined.

• Margins Margins = new Margins(55, 55, 55, 55) [get, set]

The margins of the page.

• Margins TableCellMargins = new Margins(5, 0, 5, 0) [get, set]

The margins for table cells.

• VerticalAlignment TableVAlign = VerticalAlignment.Middle [get, set]

The vertical alignment of table cells.

• Size PageSize = new Size(595, 842) [get, set]

The size of the page.

• double SpaceBeforeParagaph = 0 [get, set]

The space before each text paragraph. This value will be multiplied by the BaseFontSize.

• double SpaceAfterParagraph = 0.75 [get, set]

The space after each text paragraph. This value will be multiplied by the BaseFontSize.

• double SpaceAfterLine = 0.25 [get, set]

The space after each line of text. This value will be multiplied by the BaseFontSize.

• double SpaceBeforeHeading = 0.25 [get, set]

The space before each heading. This value will be multiplied by the font size of the heading.

• double SpaceAfterHeading = 0.25 [get, set]

The space after each heading. This value will be multiplied by the font size of the heading.

• double CodeInlineMargin = 0.25 [get, set]

The margin at the left and right of code inlines. This value will be multiplied by the current font size.

• double IndentWidth = 40 [get, set]

The indentation width used for list items.

• double QuoteBlockIndentWidth = 30 [get, set]

The indentation width used for block quotes.

• double QuoteBlockBarWidth = 5 [get, set]

The thickness of the bar to the left of block quotes.

• double SubSuperscriptFontSize = 0.7 [get, set]

The font size for subscripts and superscripts. This value will be multiplied by the current font size.

• double SuperscriptShift = 0.33 [get, set]

The upwards shift in the baseline for superscript elements. This value will be multiplied by the current font size.

double SubscriptShift = 0.14 [get, set]

The downwards shift in the baseline for subscript elements. This value will be multiplied by the current font size.

• string BaseImageUri = "" [get, set]

The base uri for resolving relative image addresses.

• Func< string, string, (string, bool)> ImageUriResolver = HTTPUtils.ResolveImageURI [get, set]

A method used to resolve (possibly remote) image uris into local file paths. The first argument of the method should be the image uri and the second argument the base uri used to resolve relative links. The method should return a tuple containing the path of the local file and a boolean value indicating whether the file has been fetched from a remote location and should be deleted after the program has finished using it.

• Uri BaseLinkUri = new Uri("about:blank") [get, set]

The base uri for resolving links.

• Func< string, string > LinkUriResolver = a => a [get, set]

A method used to resolve link addresses. The argument of the method should be the absolute link, and the method should return the resolved address. This can be used to "redirect" links to a different target.

Func< string, RasterImage > RasterImageLoader = null [get, set]

A method used to a load raster image from a local file. The argument of the method should be the path of a local image file, and the method should return a RasterImage representing that file. For example, this can be achieved using the RasterImageFile class from the VectSharp.MuPDFUtils package. If this is null, only SVG images will be included in the document.

 double ImageUnitMultiplier = 0.60714 [get, set]

The size of images (as defined in the image's width and height attributes) will be multiplied by this value to determine the actual size of the image on the page. This has no effect on images without a width or height attribute.

double ImageMultiplier = 1 [get, set]

The size of images will be multiplied by this value to determine the actual size of the image on the page. For images that have a width or height attribute, this will be applied in addition to the ImageUnitMultiplier. For images without width and height, only this multiplier will be applied.

• double ImageSideMargin = 10 [get, set]

The margin on the right of left-aligned images and on the left of right-aligned images.

• double ImageMarginTolerance = 25 [get, set]

Images will be allowed to extend into the page bottom margin area by this amount before triggering a page break. This should be smaller than the bottom margin, otherwise images risk being cut off by the page boundary.

Func< string, string, List< List< FormattedString >> SyntaxHighlighter = VectSharp.Markdown.SyntaxHighlighter.GetSynta

[get, set] A method used for syntax highlighting. The first argument should be the source code to highlight, while the second parameter is the name of the language to use for the highlight. The method should return a list of lists of

FormattedStrings, with each list of FormattedStrings representing a line. For each code block, if the method returns null, no syntax highlighting is used.

List < Action < Graphics, Colour > > Bullets [get]

Bullet points used for unordered lists. Each element of this list corresponds to the bullet for each level of list indentation. If the list indentation is greater than the number of elements in this list, the bullet points will be reused cyclically. Each element of this list is a method taking two arguments: the first is the Graphics object on which the bullet point should be drawn, while the second is the colour in which it should be painted. The method should draw the bullet point centered around the origin. The size of the bullet point will be multiplied by the current font size.

• Colour ForegroundColour = Colours.Black [get, set]

The foreground colour for text elements.

• Colour BackgroundColour = Colours.White [get, set]

The background colour for the page.

• Colour HeaderLineColour = Colour.FromRgb(180, 180, 180) [get, set]

The colour of the line below headers.

• Colour ThematicBreakLineColour = Colour.FromRgb(180, 180, 200) [get, set]

The colour for thematic break lines.

• Colour LinkColour = Colour.FromRgb(25, 140, 191) [get, set]

The colour for hypertext links-

Colour CodeInlineBackgroundColour = Colour.FromRgb(240, 240, 240) [get, set]

The background colour for code inlines.

Colour CodeBlockBackgroundColour = Colour.FromRgb(240, 240, 245) [get, set]

The background colour for code blocks.

• Colour QuoteBlockBarColour = Colour.FromRgb(75, 152, 220) [get, set]

The colour for the bar to the left of block quotes.

• Colour QuoteBlockBackgroundColour = Colour.FromRgb(240, 240, 255) [get, set]

The background colour for block quotes.

Colour InsertedColour = Colour.FromRgb(0, 158, 115) [get, set]

The colour for text that has been styled as "inserted".

Colour MarkedColour = Colour.FromRgb(213, 94, 0) [get, set]

The colour for text that has been styled as "marked".

• Colour TableHeaderRowSeparatorColour = Colours.Black [get, set]

The colour for the line separating the table header row from normal rows.

• Colour TableRowSeparatorColour = Colour.FromRgb(180, 180, 180) [get, set]

The colour for lines separating table rows from each other.

• double TableHeaderRowSeparatorThickness = 2 [get, set]

The thickness of the line separating the table header row from normal rows.

• double TableHeaderSeparatorThickness = 1 [get, set]

The thickness of lines separating table rows from each other.

• Graphics TaskListUncheckedBullet [get, set]

The bullet used for unchecked task list items.

• Graphics TaskListCheckedBullet [get, set]

The bullet used for checked task list items.

• bool AllowPageBreak = true [get, set]

Determines whether page breaks should be treated as such in the source.

6.25.1 Detailed Description

Renders Markdown documents into VectSharp graphics objects.

Definition at line 18 of file MarkdownRenderer.cs.

6.25.2 Member Enumeration Documentation

6.25.2.1 VerticalAlignment

```
\verb"enum VectSharp.Markdown.MarkdownRenderer.Vertical Alignment [strong]"
```

Defines the options for the vertical alignment of table cells.

Enumerator

Тор	Table cells will be aligned at the top of their row.
Middle	Table cells will be aligned in the middle of their row.
Bottom	Table cells will be aligned at the bottom of their row.

Definition at line 106 of file MarkdownRenderer.cs.

6.25.3 Member Function Documentation

6.25.3.1 Render() [1/2]

Renders the supplied *mardownDocument* . The <u>Document</u> produced consists of one or more pages of the size specified in the <u>PageSize</u> of the current instance.

Parameters

mardownDocument	The markdown document to render.
linkDestinations	When this method returns, this value will contain a dictionary used to associate graphic
	action tags to hyperlinks. This can be used to enable such links when rendering the
	Document to a file.

Returns

A Document containing a rendering of the supplied markdown document, consisting of one or more pages of the size specified in the PageSize of the current instance.

Definition at line 478 of file MarkdownRenderer.cs.

6.25.3.2 Render() [2/2]

Parses the supplied *markdownSource* using all the supported extensions and renders the resulting document. The Document produced consists of one or more pages of the size specified in the PageSize of the current instance.

Parameters

markdownSource	The markdown source to parse.
linkDestinations	When this method returns, this value will contain a dictionary used to associate graphic action tags to hyperlinks. This can be used to enable such links when rendering the Document to a file.

Returns

A Document containing a rendering of the supplied markdown document, consisting of one or more pages of the size specified in the PageSize of the current instance.

Definition at line 465 of file MarkdownRenderer.cs.

6.25.3.3 RenderSinglePage() [1/2]

Renders the supplied *markdownDocument*. Page breaks are disabled, and the document is rendered as a single page with the specified *width*. The page will be cropped at the appropriate height to contain the entire document.

Parameters

markdownDocument	The markdown document to render.
width	The width of the page.
linkDestinations	When this method returns, this value will contain a dictionary used to associate graphic action tags to hyperlinks. This can be used to enable such links when rendering the Page to a file.

Returns

A Page containing a rendering of the supplied markdown document.

Definition at line 406 of file MarkdownRenderer.cs.

6.25.3.4 RenderSinglePage() [2/2]

Parses the supplied *markdownSource* using all the supported extensions and renders the resulting document. Page breaks are disabled, and the document is rendered as a single page with the specified *width*. The page will be cropped at the appropriate height to contain the entire document.

Parameters

markdownSource	The markdown source to parse.
width	The width of the page.
linkDestinations	When this method returns, this value will contain a dictionary used to associate graphic action tags to hyperlinks. This can be used to enable such links when rendering the Page to a file.

Returns

A Page containing a rendering of the supplied markdown document.

Definition at line 392 of file MarkdownRenderer.cs.

6.25.4 Property Documentation

6.25.4.1 AllowPageBreak

```
bool VectSharp.Markdown.MarkdownRenderer.AllowPageBreak = true [get], [set]
```

Determines whether page breaks should be treated as such in the source.

Definition at line 378 of file MarkdownRenderer.cs.

6.25.4.2 BackgroundColour

```
Colour VectSharp.Markdown.MarkdownRenderer.BackgroundColour = Colours.White [get], [set]
```

The background colour for the page.

Definition at line 274 of file MarkdownRenderer.cs.

6.25.4.3 BaseFontSize

```
double VectSharp.Markdown.MarkdownRenderer.BaseFontSize = 9.71424 [get], [set]
```

The base font size to use when rendering the document. This will be the size of regular elements, and the size of header elements will be expressed as a multiple of this.

Definition at line 23 of file MarkdownRenderer.cs.

6.25.4.4 BaselmageUri

```
string VectSharp.Markdown.MarkdownRenderer.BaseImageUri = "" [get], [set]
```

The base uri for resolving relative image addresses.

Definition at line 197 of file MarkdownRenderer.cs.

6.25.4.5 BaseLinkUri

Uri VectSharp.Markdown.MarkdownRenderer.BaseLinkUri = new Uri("about:blank") [get], [set]

The base uri for resolving links.

Definition at line 207 of file MarkdownRenderer.cs.

6.25.4.6 BoldFontFamily

FontFamily VectSharp.Markdown.MarkdownRenderer.BoldFontFamily = new FontFamily(FontFamily.StandardFontFamilies[get], [set]

The font family for bold text.

Definition at line 51 of file MarkdownRenderer.cs.

6.25.4.7 BoldItalicFontFamily

FontFamily VectSharp.Markdown.MarkdownRenderer.BoldItalicFontFamily = new FontFamily(FontFamily.StandardFontFamily[get], [set]

The font family for bold italic text.

Definition at line 61 of file MarkdownRenderer.cs.

6.25.4.8 BoldUnderlineThickness

```
double VectSharp.Markdown.MarkdownRenderer.BoldUnderlineThickness = 0.15 [get], [set]
```

The thickness of underlines for bold text. This value will be multiplied by the font size of the element being underlined.

Definition at line 91 of file MarkdownRenderer.cs.

6.25.4.9 Bullets

```
List<Action<Graphics, Colour> > VectSharp.Markdown.MarkdownRenderer.Bullets [get]
```

Initial value:

Bullet points used for unordered lists. Each element of this list corresponds to the bullet for each level of list indentation. If the list indentation is greater than the number of elements in this list, the bullet points will be reused cyclically. Each element of this list is a method taking two arguments: the first is the Graphics object on which the bullet point should be drawn, while the second is the colour in which it should be painted. The method should draw the bullet point centered around the origin. The size of the bullet point will be multiplied by the current font size.

Definition at line 248 of file MarkdownRenderer.cs.

6.25.4.10 CodeBlockBackgroundColour

```
Colour VectSharp.Markdown.MarkdownRenderer.CodeBlockBackgroundColour = Colour.FromRgb(240,
240, 245) [get], [set]
```

The background colour for code blocks.

Definition at line 299 of file MarkdownRenderer.cs.

6.25.4.11 CodeFont

```
FontFamily VectSharp.Markdown.MarkdownRenderer.CodeFont = new FontFamily(FontFamily.StandardFontFamilies.Couri
[get], [set]
```

The font family for code elements.

Definition at line 66 of file MarkdownRenderer.cs.

6.25.4.12 CodeFontBold

```
FontFamily VectSharp.Markdown.MarkdownRenderer.CodeFontBold = new FontFamily(FontFamily.StandardFontFamilies.CodeFontBold = new FontFamily(FontFamily)StandardFontFamilies.CodeFontBold = new FontFamily(FontFamily)StandardFontFamily(FontFamily)StandardFontFamily(FontFamily)StandardFontFamily(FontFamily)StandardFontFamily(FontFamily)StandardFontFamily(FontFamily)StandardFontFamily(FontFamily)StandardFontFamily(FontFamily)StandardFontFamily(FontFamily)StandardFontFamily(FontFamily)StandardFontFamily(FontFamily)StandardFontFamily(FontFamily)StandardFontFamily(FontFamily)StandardFontFamily(FontFamily)StandardFontFamily(FontFamily)StandardFontFamily(FontFamily)StandardFontFamily(FontFamily)StandardFontFamily(FontFamily)StandardFontFamily(FontFamily)StandardFontFamily(FontFamily)StandardFontFamily(FontFamily)StandardFontFamily(FontFamily)StandardFontFamily(FontFamily)StandardFontFamily(FontFamily)StandardFontFamily(FontFamily)StandardFontFamily(FontFamily)StandardFontFamily(FontFamily(FontFamily)StandardFontFamily(FontFamily(FontFamily)StandardFontFamily(FontFamily(FontFamily(FontFamily(FontFamily(FontFamily(FontFamily(FontFamily(FontFamily(FontFamily(FontFamily(FontFamily(FontFamily(FontFamily(FontFamily(FontFamily(FontFamily(FontFamily(FontFamily(FontFamily(FontFamily(FontFamily(FontFamily(FontFamily(FontFamily(FontFamily(FontFamily(FontFamily(FontFamily(FontFamily(FontFamily(FontFamily(FontFamily(FontFamily(
```

The font family for bold code elements.

Definition at line 71 of file MarkdownRenderer.cs.

6.25.4.13 CodeFontBoldItalic

FontFamily VectSharp.Markdown.MarkdownRenderer.CodeFontBoldItalic = new FontFamily(FontFamily.StandardFontFamilget), [set]

The font family for bold italic code elements.

Definition at line 81 of file MarkdownRenderer.cs.

6.25.4.14 CodeFontItalic

FontFamily VectSharp.Markdown.MarkdownRenderer.CodeFontItalic = new FontFamily(FontFamily.StandardFontFamilies [get], [set]

The font family for italic code elements.

Definition at line 76 of file MarkdownRenderer.cs.

6.25.4.15 CodelnlineBackgroundColour

Colour VectSharp.Markdown.MarkdownRenderer.CodeInlineBackgroundColour = Colour.FromRgb(240,
240, 240) [get], [set]

The background colour for code inlines.

Definition at line 294 of file MarkdownRenderer.cs.

6.25.4.16 CodeInlineMargin

```
double VectSharp.Markdown.MarkdownRenderer.CodeInlineMargin = 0.25 [get], [set]
```

The margin at the left and right of code inlines. This value will be multiplied by the current font size.

Definition at line 162 of file MarkdownRenderer.cs.

6.25.4.17 ForegroundColour

```
Colour VectSharp.Markdown.MarkdownRenderer.ForegroundColour = Colours.Black [get], [set]
```

The foreground colour for text elements.

Definition at line 269 of file MarkdownRenderer.cs.

6.25.4.18 HeaderFontSizeMultipliers

```
double [] VectSharp.Markdown.MarkdownRenderer.HeaderFontSizeMultipliers [get]
```

Initial value:

The font size for elements at each header level. The values in this array will be multiplied by the BaseFontSize.

Definition at line 28 of file MarkdownRenderer.cs.

6.25.4.19 HeaderLineColour

```
Colour VectSharp.Markdown.MarkdownRenderer.HeaderLineColour = Colour.FromRgb(180, 180, 180)
[get], [set]
```

The colour of the line below headers.

Definition at line 279 of file MarkdownRenderer.cs.

6.25.4.20 HeaderLineThicknesses

```
double [] VectSharp.Markdown.MarkdownRenderer.HeaderLineThicknesses = new double[] { 1, 1, 0, 0, 0, 0 } [get]
```

The thickness of the separator line after a header of each level. A value of 0 disables the line after headers of that level.

Definition at line 36 of file MarkdownRenderer.cs.

6.25.4.21 ImageMarginTolerance

```
double VectSharp.Markdown.MarkdownRenderer.ImageMarginTolerance = 25 [get], [set]
```

Images will be allowed to extend into the page bottom margin area by this amount before triggering a page break. This should be smaller than the bottom margin, otherwise images risk being cut off by the page boundary.

Definition at line 237 of file MarkdownRenderer.cs.

6.25.4.22 ImageMultiplier

```
double VectSharp.Markdown.MarkdownRenderer.ImageMultiplier = 1 [get], [set]
```

The size of images will be multiplied by this value to determine the actual size of the image on the page. For images that have a width or height attribute, this will be applied in addition to the ImageUnitMultiplier. For images without width and height, only this multiplier will be applied.

Definition at line 227 of file MarkdownRenderer.cs.

6.25.4.23 ImageSideMargin

```
double VectSharp.Markdown.MarkdownRenderer.ImageSideMargin = 10 [get], [set]
```

The margin on the right of left-aligned images and on the left of right-aligned images.

Definition at line 232 of file MarkdownRenderer.cs.

6.25.4.24 ImageUnitMultiplier

```
{\tt double\ VectSharp.Markdown.MarkdownRenderer.ImageUnitMultiplier\ =\ 0.60714\quad [get],\ [set]}
```

The size of images (as defined in the image's width and height attributes) will be multiplied by this value to determine the actual size of the image on the page. This has no effect on images without a width or height attribute.

Definition at line 222 of file MarkdownRenderer.cs.

6.25.4.25 ImageUriResolver

```
Func<string, string, (string, bool)> VectSharp.Markdown.MarkdownRenderer.ImageUriResolver =
HTTPUtils.ResolveImageURI [get], [set]
```

A method used to resolve (possibly remote) image uris into local file paths. The first argument of the method should be the image uri and the second argument the base uri used to resolve relative links. The method should return a tuple containing the path of the local file and a boolean value indicating whether the file has been fetched from a remote location and should be deleted after the program has finished using it.

Definition at line 202 of file MarkdownRenderer.cs.

6.25.4.26 IndentWidth

```
double VectSharp.Markdown.MarkdownRenderer.IndentWidth = 40 [get], [set]
```

The indentation width used for list items.

Definition at line 167 of file MarkdownRenderer.cs.

6.25.4.27 InsertedColour

```
Colour VectSharp.Markdown.MarkdownRenderer.InsertedColour = Colour.FromRgb(0, 158, 115) [get],
[set]
```

The colour for text that has been styled as "inserted".

Definition at line 314 of file MarkdownRenderer.cs.

6.25.4.28 ItalicFontFamily

```
FontFamily VectSharp.Markdown.MarkdownRenderer.ItalicFontFamily = new FontFamily(FontFamily.StandardFontFamiliget], [set]
```

The font family for italic text.

Definition at line 56 of file MarkdownRenderer.cs.

6.25.4.29 LinkColour

```
Colour VectSharp.Markdown.MarkdownRenderer.LinkColour = Colour.FromRgb(25, 140, 191) [get],
[set]
```

The colour for hypertext links-

Definition at line 289 of file MarkdownRenderer.cs.

6.25.4.30 LinkUriResolver

```
Func<string, string> VectSharp.Markdown.MarkdownRenderer.LinkUriResolver = a => a [get],
[set]
```

A method used to resolve link addresses. The argument of the method should be the absolute link, and the method should return the resolved address. This can be used to "redirect" links to a different target.

Definition at line 212 of file MarkdownRenderer.cs.

6.25.4.31 Margins

```
Margins VectSharp.Markdown.MarkdownRenderer.Margins = new Margins (55, 55, 55, 55) [get], [set]
```

The margins of the page.

Definition at line 96 of file MarkdownRenderer.cs.

6.25.4.32 MarkedColour

```
Colour VectSharp.Markdown.MarkdownRenderer.MarkedColour = Colour.FromRgb(213, 94, 0) [get],
[set]
```

The colour for text that has been styled as "marked".

Definition at line 319 of file MarkdownRenderer.cs.

6.25.4.33 PageSize

```
Size VectSharp.Markdown.MarkdownRenderer.PageSize = new Size(595, 842) [get], [set]
```

The size of the page.

Definition at line 132 of file MarkdownRenderer.cs.

6.25.4.34 QuoteBlockBackgroundColour

```
Colour VectSharp.Markdown.MarkdownRenderer.QuoteBlockBackgroundColour = Colour.FromRgb(240,
240, 255) [get], [set]
```

The background colour for block quotes.

Definition at line 309 of file MarkdownRenderer.cs.

6.25.4.35 QuoteBlockBarColour

```
Colour VectSharp.Markdown.MarkdownRenderer.QuoteBlockBarColour = Colour.FromRgb(75, 152, 220)
[get], [set]
```

The colour for the bar to the left of block quotes.

Definition at line 304 of file MarkdownRenderer.cs.

6.25.4.36 QuoteBlockBarWidth

```
double VectSharp.Markdown.MarkdownRenderer.QuoteBlockBarWidth = 5 [get], [set]
```

The thickness of the bar to the left of block quotes.

Definition at line 177 of file MarkdownRenderer.cs.

6.25.4.37 QuoteBlockIndentWidth

```
double VectSharp.Markdown.MarkdownRenderer.QuoteBlockIndentWidth = 30 [get], [set]
```

The indentation width used for block quotes.

Definition at line 172 of file MarkdownRenderer.cs.

6.25.4.38 RasterImageLoader

```
Func<string, RasterImage> VectSharp.Markdown.MarkdownRenderer.RasterImageLoader = null [get],
[set]
```

A method used to a load raster image from a local file. The argument of the method should be the path of a local image file, and the method should return a RasterImage representing that file. For example, this can be achieved using the RasterImageFile class from the VectSharp.MuPDFUtils package. If this is null, only SVG images will be included in the document.

Definition at line 217 of file MarkdownRenderer.cs.

6.25.4.39 RegularFontFamily

FontFamily VectSharp.Markdown.MarkdownRenderer.RegularFontFamily = new FontFamily(FontFamily.StandardFontFamily[get], [set]

The font family for regular text.

Definition at line 46 of file MarkdownRenderer.cs.

6.25.4.40 SpaceAfterHeading

```
double VectSharp.Markdown.MarkdownRenderer.SpaceAfterHeading = 0.25 [get], [set]
```

The space after each heading. This value will be multiplied by the font size of the heading.

Definition at line 157 of file MarkdownRenderer.cs.

6.25.4.41 SpaceAfterLine

```
double VectSharp.Markdown.MarkdownRenderer.SpaceAfterLine = 0.25 [get], [set]
```

The space after each line of text. This value will be multiplied by the BaseFontSize.

Definition at line 147 of file MarkdownRenderer.cs.

6.25.4.42 SpaceAfterParagraph

```
double VectSharp.Markdown.MarkdownRenderer.SpaceAfterParagraph = 0.75 [get], [set]
```

The space after each text paragraph. This value will be multiplied by the BaseFontSize.

Definition at line 142 of file MarkdownRenderer.cs.

6.25.4.43 SpaceBeforeHeading

```
double VectSharp.Markdown.MarkdownRenderer.SpaceBeforeHeading = 0.25 [get], [set]
```

The space before each heading. This value will be multiplied by the font size of the heading.

Definition at line 152 of file MarkdownRenderer.cs.

6.25.4.44 SpaceBeforeParagaph

```
double VectSharp.Markdown.MarkdownRenderer.SpaceBeforeParagaph = 0 [get], [set]
```

The space before each text paragraph. This value will be multiplied by the BaseFontSize.

Definition at line 137 of file MarkdownRenderer.cs.

6.25.4.45 SubscriptShift

```
double VectSharp.Markdown.MarkdownRenderer.SubscriptShift = 0.14 [get], [set]
```

The downwards shift in the baseline for subscript elements. This value will be multiplied by the current font size.

Definition at line 192 of file MarkdownRenderer.cs.

6.25.4.46 SubSuperscriptFontSize

```
double VectSharp.Markdown.MarkdownRenderer.SubSuperscriptFontSize = 0.7 [get], [set]
```

The font size for subscripts and superscripts. This value will be multiplied by the current font size.

Definition at line 182 of file MarkdownRenderer.cs.

6.25.4.47 SuperscriptShift

```
double VectSharp.Markdown.MarkdownRenderer.SuperscriptShift = 0.33 [get], [set]
```

The upwards shift in the baseline for superscript elements. This value will be multiplied by the current font size.

Definition at line 187 of file MarkdownRenderer.cs.

6.25.4.48 SyntaxHighlighter

```
Func<string, string, List<List<FormattedString> > VectSharp.Markdown.MarkdownRenderer. \leftarrow SyntaxHighlighter = VectSharp.Markdown.SyntaxHighlighter.GetSyntaxHighlightedLines [get], [set]
```

A method used for syntax highlighting. The first argument should be the source code to highlight, while the second parameter is the name of the language to use for the highlight. The method should return a list of lists of FormattedStrings, with each list of FormattedStrings representing a line. For each code block, if the method returns null, no syntax highlighting is used.

Definition at line 242 of file MarkdownRenderer.cs.

6.25.4.49 TableCellMargins

```
Margins VectSharp.Markdown.MarkdownRenderer.TableCellMargins = new Margins(5, 0, 5, 0) [get],
[set]
```

The margins for table cells.

Definition at line 101 of file MarkdownRenderer.cs.

6.25.4.50 TableHeaderRowSeparatorColour

Colour VectSharp.Markdown.MarkdownRenderer.TableHeaderRowSeparatorColour = Colours.Black [get],
[set]

The colour for the line separating the table header row from normal rows.

Definition at line 324 of file MarkdownRenderer.cs.

6.25.4.51 TableHeaderRowSeparatorThickness

```
double VectSharp.Markdown.MarkdownRenderer.TableHeaderRowSeparatorThickness = 2 [get], [set]
```

The thickness of the line separating the table header row from normal rows.

Definition at line 334 of file MarkdownRenderer.cs.

6.25.4.52 TableHeaderSeparatorThickness

```
double VectSharp.Markdown.MarkdownRenderer.TableHeaderSeparatorThickness = 1 [get], [set]
```

The thickness of lines separating table rows from each other.

Definition at line 339 of file MarkdownRenderer.cs.

6.25.4.53 TableRowSeparatorColour

```
Colour VectSharp.Markdown.MarkdownRenderer.TableRowSeparatorColour = Colour.FromRgb(180, 180,
180) [get], [set]
```

The colour for lines separating table rows from each other.

Definition at line 329 of file MarkdownRenderer.cs.

6.25.4.54 TableVAlign

```
VerticalAlignment VectSharp.Markdown.MarkdownRenderer.TableVAlign = VerticalAlignment.Middle
[get], [set]
```

The vertical alignment of table cells.

Definition at line 127 of file MarkdownRenderer.cs.

6.25.4.55 TaskListCheckedBullet

Graphics VectSharp.Markdown.MarkdownRenderer.TaskListCheckedBullet [get], [set]

Initial value:

The bullet used for checked task list items.

Definition at line 359 of file MarkdownRenderer.cs.

6.25.4.56 TaskListUncheckedBullet

Graphics VectSharp.Markdown.MarkdownRenderer.TaskListUncheckedBullet [get], [set]

Initial value:

The bullet used for unchecked task list items.

Definition at line 344 of file MarkdownRenderer.cs.

6.25.4.57 ThematicBreakLineColour

```
Colour VectSharp.Markdown.MarkdownRenderer.ThematicBreakLineColour = Colour.FromRgb(180, 180,
200) [get], [set]
```

The colour for thematic break lines.

Definition at line 284 of file MarkdownRenderer.cs.

6.25.4.58 ThematicBreakThickness

double VectSharp.Markdown.MarkdownRenderer.ThematicBreakThickness = 2 [get], [set]

The thickness of thematic break lines.

Definition at line 41 of file MarkdownRenderer.cs.

6.25.4.59 UnderlineThickness

double VectSharp.Markdown.MarkdownRenderer.UnderlineThickness = 0.075 [get], [set]

The thickness of underlines. This value will be multiplied by the font size of the element being underlined.

Definition at line 86 of file MarkdownRenderer.cs.

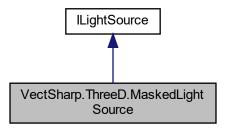

The documentation for this class was generated from the following file:

VectSharp.Markdown/MarkdownRenderer.cs

6.26 VectSharp.ThreeD.MaskedLightSource Class Reference

Represents a point light source with a stencil in front of it.

Inheritance diagram for VectSharp.ThreeD.MaskedLightSource:

Public Member Functions

 MaskedLightSource (double intensity, Point3D position, NormalizedVector3D direction, double distance, GraphicsPath mask, double maskOrientation, double triangulationResolution)

Creates a new MaskedLightSource by triangulating the specified GraphicsPath.

Creates a new MaskedLightSource using the specified triangulatedMask.

LightIntensity GetLightAt (Point3D point)

Computes the light intensity at the specified point, without taking into account any obstructions.

double GetObstruction (Point3D point, IEnumerable < Triangle3DElement > shadowingTriangles)

Determines the amount of obstruction of the light that results at point due to the specified shadowing Triangles .

Properties

```
• bool CastsShadow = true [get, set]
```

• Point3D Position [get]

The position of the light source.

• Point3D Origin [get]

The projection of the Position on the mask plane along the light's Direction.

• NormalizedVector3D Direction [get]

The direction of the light.

• double Distance [get]

The distance between the light source and the mask plane.

• double Intensity [get, set]

The base intensity of the light.

double DistanceAttenuationExponent = 2 [get, set]

An exponent determining how fast the light attenuates with increasing distance. Set to 0 to disable distance attenuation.

• double AngleAttenuationExponent = 1 [get, set]

An exponent determining how fast the light attenuates away from the light's axis. Set to 0 to disable angular attenuation.

6.26.1 Detailed Description

Represents a point light source with a stencil in front of it.

Definition at line 368 of file Lights.cs.

6.26.2 Constructor & Destructor Documentation

6.26.2.1 MaskedLightSource() [1/2]

Creates a new MaskedLightSource by triangulating the specified GraphicsPath.

Parameters

intensity	The base intensity of the light.
position	The position of the light source.
direction	The direction of the light.
distance	The distance between the light source and the mask plane.
mask	A GraphicsPath representing the transparent part of the mask.
maskOrientation	An angle in radians determining the orientation of the 2D mask in the mask plane.
triangulationResolution	The resolution to use to triangulate the <i>mask</i> .

Definition at line 420 of file Lights.cs.

6.26.2.2 MaskedLightSource() [2/2]

Creates a new MaskedLightSource using the specified triangulatedMask.

Parameters

intensity	The base intensity of the light.
position	The position of the light source.
direction	The direction of the light.
distance	The distance between the light source and the mask plane.
triangulatedMask	A collection of GraphicsPaths representing the transparent part of the mask. Each GraphicsPath should represent a single triangle.
maskOrientation	An angle in radians determining the orientation of the 2D mask in the mask plane.

Definition at line 434 of file Lights.cs.

6.26.3 Property Documentation

6.26.3.1 AngleAttenuationExponent

```
double VectSharp.ThreeD.MaskedLightSource.AngleAttenuationExponent = 1 [get], [set]
```

An exponent determining how fast the light attenuates away from the light's axis. Set to 0 to disable angular attenuation.

Definition at line 408 of file Lights.cs.

6.26.3.2 Direction

NormalizedVector3D VectSharp.ThreeD.MaskedLightSource.Direction [get]

The direction of the light.

Definition at line 386 of file Lights.cs.

6.26.3.3 Distance

```
double VectSharp.ThreeD.MaskedLightSource.Distance [get]
```

The distance between the light source and the mask plane.

Definition at line 391 of file Lights.cs.

6.26.3.4 DistanceAttenuationExponent

```
double VectSharp.ThreeD.MaskedLightSource.DistanceAttenuationExponent = 2 [get], [set]
```

An exponent determining how fast the light attenuates with increasing distance. Set to 0 to disable distance attenuation.

Definition at line 403 of file Lights.cs.

6.26.3.5 Intensity

```
double VectSharp.ThreeD.MaskedLightSource.Intensity [get], [set]
```

The base intensity of the light.

Definition at line 398 of file Lights.cs.

6.26.3.6 Origin

```
Point3D VectSharp.ThreeD.MaskedLightSource.Origin [get]
```

The projection of the Position on the mask plane along the light's Direction.

Definition at line 381 of file Lights.cs.

6.26.3.7 Position

```
Point3D VectSharp.ThreeD.MaskedLightSource.Position [get]
```

The position of the light source.

Definition at line 376 of file Lights.cs.

The documentation for this class was generated from the following file:

· VectSharp.ThreeD/Lights.cs

6.27 VectSharp.ThreeD.ObjectFactory Class Reference

A static class containing methods to create complex 3D objects.

Static Public Member Functions

 static List< Element3D > CreateCube (Point3D center, double size, IEnumerable< IMaterial > fill, string tag=null, int zIndex=0)

Creates a cube.

Creates a cuboid.

static List< Element3D > CreateRectangle (Point3D point1, Point3D point2, Point3D point3, Point3D point4, IEnumerable< IMaterial > fill, string tag=null, int zIndex=0)

Creates a quadrilater. All the vertices need not be coplanar.

static List< Element3D > CreateRectangle (Point3D point1, Point3D point2, Point3D point3, Point3D point4, NormalizedVector3D point1Normal, NormalizedVector3D point2Normal, NormalizedVector3D point4Normal, IEnumerable
 IMaterial > fill, string tag=null, int zIndex=0)

Creates a quadrilater, specifying the vertex normals at the four vertices. All the vertices need not be coplanar.

static List< Element3D > CreateSphere (Point3D center, double radius, int steps, IEnumerable< IMaterial > fill, string tag=null, int zIndex=0)

Creates a sphere.

 static List< Element3D > CreateTetrahedron (Point3D center, double radius, IEnumerable< IMaterial > fill, string tag=null, int zIndex=0)

Creates a tetrahedron inscribed in a sphere.

static List< Element3D > CreatePolygon (GraphicsPath polygon2D, double triangulationResolution, Point3D origin, NormalizedVector3D xAxis, NormalizedVector3D yAxis, bool reverseTriangles, IEnumerable
 IMaterial > fill, string tag=null, int zIndex=0)

Creates a flat polygon.

• static List< Element3D > CreatePrism (GraphicsPath polygonBase2D, double triangulationResolution, Point3D bottomOrigin, Point3D topOrigin, NormalizedVector3D baseXAxis, NormalizedVector3D baseYAxis, IEnumerable< IMaterial > fill, string tag=null, int zIndex=0)

Creates a prism with the specified base.

 static List< Element3D > CreateWireframe (IEnumerable< Element3D > object3D, Colour colour, double thickness=1, LineCaps lineCap=LineCaps.Butt, LineDash? lineDash=null, string tag=null, int zIndex=0)

Creates a wireframe from a collection of Element3Ds.

static List< Element3D > CreatePoints (IEnumerable< Element3D > object3D, Colour colour, double diameter=1, string tag=null, int zIndex=0)

Obtains a list of Point3DElement corresponding to the vertices of a list of Element3Ds.

6.27.1 Detailed Description

A static class containing methods to create complex 3D objects.

Definition at line 11 of file ObjectFactory.cs.

6.27.2 Member Function Documentation

6.27.2.1 CreateCube()

Creates a cube.

Parameters

center	The centre of the cube.
size	The length of each side of the cube.
fill	A collection of materials that will be applied to the Triangle3DElements returned by this method.
tag	A tag that will be applied to the Triangle3DElements returned by this method.
zIndex	A z-index that will be applied to the Triangle3DElements returned by this method.

Returns

A list of Triangle3DElements that constitute the cube.

Definition at line 22 of file ObjectFactory.cs.

6.27.2.2 CreateCuboid()

```
static List<Element3D> VectSharp.ThreeD.ObjectFactory.CreateCuboid (
    Point3D center,
    double sizeX,
    double sizeY,
    double sizeZ,
    IEnumerable< IMaterial > fill,
    string tag = null,
    int zIndex = 0 ) [static]
```

Creates a cuboid.

Parameters

center	The centre of the cube.
sizeX	The length of the sides of the cube parallel to the x axis.
sizeY	The length of the sides of the cube parallel to the y axis.
sizeZ	The length of the sides of the cube parallel to the z axis.
fill	A collection of materials that will be applied to the Triangle3DElements returned by this method.
tag	A tag that will be applied to the Triangle3DElements returned by this method.
zIndex	A z-index that will be applied to the Triangle3DElements returned by this method.

Returns

A list of Triangle3DElements that constitute the cuboid.

Definition at line 38 of file ObjectFactory.cs.

6.27.2.3 CreatePoints()

Obtains a list of Point3DElement corresponding to the vertices of a list of Element3Ds.

Parameters

object3D	The collection of Element3Ds. Point3DElements are ignored.
colour	The colour of the Point3DElements returned by this method.
diameter	The diameter of the Point3DElements returned by this method.
tag	A tag that will be applied to the Point3DElements returned by this method.
zIndex	A z-index that will be applied to the Point3DElements returned by this method.

Returns

A list of Point3DElements corresponding to the vertices of the Element3Ds.

Definition at line 395 of file ObjectFactory.cs.

6.27.2.4 CreatePolygon()

Creates a flat polygon.

Parameters

polygon2D	A 2D GraphicsPath representing the polygon.
triangulationResolution	The resolution that will be used to linearise curve segments in the GraphicsPath.
origin	A Point3D that will correspond to the origin of the 2D reference system.
xAxis	A NormalizedVector3D that will correspond to the x axis of the 2D reference system. This will be orthonormalised to the <i>yAxis</i> .
yAxis	A NormalizedVector3D that will correspond to the y axis of the 2D reference system.
reverseTriangles	Indicates whether the order of the points (and thus the normals) of all the triangles returned by this method should be reversed.
fill	A collection of materials that will be applied to the Triangle3DElements returned by this method.
tag	A tag that will be applied to the Triangle3DElements returned by this method.
zIndex	A z-index that will be applied to the Triangle3DElements returned by this method.

Returns

A list of Triangle3DElements that constitute the polygon.

Definition at line 256 of file ObjectFactory.cs.

6.27.2.5 CreatePrism()

Creates a prism with the specified base.

Parameters

polygonBase2D	A 2D GraphicsPath representing the base of the prism.
triangulationResolution	The resolution that will be used to linearise curve segments in the GraphicsPath.
bottomOrigin	A Point3D that will correspond to the origin of the 2D reference system of the bottom
	base.
topOrigin	A Point3D that will correspond to the origin of the 2D reference system of the top
	base.
baseXAxis	A NormalizedVector3D that will correspond to the x axis of the 2D reference system
	of the bases. This will be orthonormalised to the baseYAxis.
baseYAxis	A NormalizedVector3D that will correspond to the y axis of the 2D reference system
	of the bases.
fill	A collection of materials that will be applied to the Triangle3DElements returned by
	this method.
tag	A tag that will be applied to the Triangle3DElements returned by this method.
zIndex	A z-index that will be applied to the Triangle3DElements returned by this method Generated by Doxygen

Returns

A list of Triangle3DElements that constitute the prism.

Definition at line 297 of file ObjectFactory.cs.

6.27.2.6 CreateRectangle() [1/2]

Creates a quadrilater. All the vertices need not be coplanar.

Parameters

point1	The first vertex of the quadrilater.
point2	The second vertex of the quadrilater.
point3	The third vertex of the quadrilater.
point4	The fourth vertex of the quadrilater.
fill	A collection of materials that will be applied to the Triangle3DElements returned by this method.
tag	A tag that will be applied to the Triangle3DElements returned by this method.
zIndex	A z-index that will be applied to the Triangle3DElements returned by this method.

Returns

A list containing two Triangle3DElements representing the quadrilater.

Definition at line 76 of file ObjectFactory.cs.

6.27.2.7 CreateRectangle() [2/2]

Creates a quadrilater, specifying the vertex normals at the four vertices. All the vertices need not be coplanar.

Parameters

point1	The first vertex of the quadrilater.
point2	The second vertex of the quadrilater.
point3	The third vertex of the quadrilater.
point4	The fourth vertex of the quadrilater.
point1Normal	The vertex normal at the first vertex of the quadrilater.
point2Normal	The vertex normal at the second vertex of the quadrilater.
point3Normal	The vertex normal at the third vertex of the quadrilater.
point4Normal	The vertex normal at the fourth vertex of the quadrilater.
fill	A collection of materials that will be applied to the Triangle3DElements returned by this method.
tag	A tag that will be applied to the Triangle3DElements returned by this method.
zIndex	A z-index that will be applied to the Triangle3DElements returned by this method.

Returns

A list containing two Triangle3DElements representing the quadrilater.

Definition at line 106 of file ObjectFactory.cs.

6.27.2.8 CreateSphere()

Creates a sphere.

Parameters

center	The centre of the sphere.
radius	The radius of the sphere.
steps	The number of meridians and parallels to use when generating the sphere.
fill	A collection of materials that will be applied to the Triangle3DElements returned by this method.
tag	A tag that will be applied to the Triangle3DElements returned by this method.
zIndex	A z-index that will be applied to the Triangle3DElements returned by this method.

Returns

A list of Triangle3DElements that constitute the sphere.

Definition at line 131 of file ObjectFactory.cs.

6.27.2.9 CreateTetrahedron()

Creates a tetrahedron inscribed in a sphere.

Parameters

center	The centre of the tetrahedron.
radius	The radius of the sphere in which the tetrahedron is inscribed.
fill	A collection of materials that will be applied to the Triangle3DElements returned by this method.
tag	A tag that will be applied to the Triangle3DElements returned by this method.
zIndex	A z-index that will be applied to the Triangle3DElements returned by this method.

Returns

A list of Triangle3DElements that constitute the sphere.

Definition at line 221 of file ObjectFactory.cs.

6.27.2.10 CreateWireframe()

Creates a wireframe from a collection of Element3Ds.

Parameters

object3D	The collection of Element3Ds. Line3DElements and Point3DElements are ignored.
colour	The colour of the Line3DElements returned by this method.
thickness	The thickness of the Line3DElements returned by this method.
lineCap	The line cap of the Line3DElements returned by this method.
lineDash	The line dash of the Line3DElements returned by this method.
tag	A tag that will be applied to the Line3DElements returned by this method.
zIndex	A z-index that will be applied to the Line3DElements returned by this method.

Returns

A list of Line3DElements that constitute the wireframe.

Definition at line 353 of file ObjectFactory.cs.

The documentation for this class was generated from the following file:

· VectSharp.ThreeD/ObjectFactory.cs

6.28 VectSharp.Page Class Reference

Represents a Graphics object with a width and height.

Public Member Functions

```
• Page (double width, double height)
```

Create a new page.

void Crop (Point topLeft, Size size)

Translate and resize the Page so that it displays the rectangle defined by topLeft and size .

Properties

```
double Width [get, set]

Width of the page.
double Height [get, set]

Height of the page.
Graphics Graphics [get, set]

Graphics surface of the page.
Colour Background = Colour.FromRgba(255, 255, 255, 0) [get, set]

Background colour of the page.
```

6.28.1 Detailed Description

Represents a Graphics object with a width and height.

Definition at line 47 of file Document.cs.

6.28.2 Constructor & Destructor Documentation

6.28.2.1 Page()

Create a new page.

Parameters

width	The width of the page.
height	The height of the page.

Definition at line 74 of file Document.cs.

6.28.3 Member Function Documentation

6.28.3.1 Crop()

Translate and resize the Page so that it displays the rectangle defined by topLeft and size .

Parameters

topLeft	The top left corner of the area to include in the page.
size	The size of the area to include in the page.

Definition at line 88 of file Document.cs.

6.28.4 Property Documentation

6.28.4.1 Background

```
Colour VectSharp.Page.Background = Colour.FromRgba(255, 255, 255, 0) [get], [set]
```

Background colour of the page.

Definition at line 67 of file Document.cs.

6.28.4.2 Graphics

```
Graphics VectSharp.Page.Graphics [get], [set]
```

Graphics surface of the page.

Definition at line 62 of file Document.cs.

6.28.4.3 Height

```
double VectSharp.Page.Height [get], [set]
```

Height of the page.

Definition at line 57 of file Document.cs.

6.28.4.4 Width

```
double VectSharp.Page.Width [get], [set]
```

Width of the page.

Definition at line 52 of file Document.cs.

· VectSharp/Document.cs

6.29 VectSharp.ThreeD.ParallelLightSource Class Reference

Represents a parallel light source.

Inheritance diagram for VectSharp.ThreeD.ParallelLightSource:

Public Member Functions

• ParallelLightSource (double intensity, NormalizedVector3D direction)

Creates a new ParallelLightSource instance.

LightIntensity GetLightAt (Point3D point)

Computes the light intensity at the specified point, without taking into account any obstructions.

double GetObstruction (Point3D point, IEnumerable < Triangle3DElement > shadowingTriangles)

Determines the amount of obstruction of the light that results at point due to the specified shadowing Triangles .

Properties

```
• double Intensity [get, set]
```

The intensity of the light.

• NormalizedVector3D Direction [get]

The direction along which the light travels.

• NormalizedVector3D ReverseDirection [get]

The reverse of Direction.

• bool CastsShadow = true [get, set]

6.29.1 Detailed Description

Represents a parallel light source.

Definition at line 109 of file Lights.cs.

6.29.2 Constructor & Destructor Documentation

6.29.2.1 ParallelLightSource()

Creates a new ParallelLightSource instance.

Parameters

intensity	The intensity of the light.
direction	The direction along which the light travels.

Definition at line 134 of file Lights.cs.

6.29.3 Property Documentation

6.29.3.1 Direction

NormalizedVector3D VectSharp.ThreeD.ParallelLightSource.Direction [get]

The direction along which the light travels.

Definition at line 119 of file Lights.cs.

6.29.3.2 Intensity

double VectSharp.ThreeD.ParallelLightSource.Intensity [get], [set]

The intensity of the light.

Definition at line 114 of file Lights.cs.

6.29.3.3 ReverseDirection

NormalizedVector3D VectSharp.ThreeD.ParallelLightSource.ReverseDirection [get]

The reverse of Direction.

Definition at line 124 of file Lights.cs.

The documentation for this class was generated from the following file:

VectSharp.ThreeD/Lights.cs

6.30 VectSharp.SVG.Parser Class Reference

Contains methods to read an SVG image file.

Static Public Member Functions

• static Page ParseSVGURI (string uri, bool ignored=false)

Parses an SVG image URI.

static Page FromString (string svgSource)

Parses SVG source into a Page containing the image represented by the code.

static Page FromFile (string fileName)

Parses an SVG image file into a Page containing the image.

• static Page FromStream (Stream svgSourceStream)

Parses an stream containing SVG source code into a Page containing the image represented by the code.

Static Public Attributes

static Func< string, bool, Page > ParseImageURI

A function that takes as input an image URI and a boolean value indicating whether the image should be interpolated, and returns a Page object containing the image. By default, this is equal to ParseSVGURI, i.e. it is only able to parse SVG images. If you wish to enable the parsing of other formats, you should install the "VectSharp.MuPDFUtils" NuGet package and enable the parser in your program by doing something like:

6.30.1 Detailed Description

Contains methods to read an SVG image file.

Definition at line 32 of file SVGParser.cs.

6.30.2 Member Function Documentation

6.30.2.1 FromFile()

Parses an SVG image file into a Page containing the image.

Parameters

fileName	The path to the SVG image file.
----------	---------------------------------

Returns

A Page containing the image represented by the file.

Definition at line 144 of file SVGParser.cs.

6.30.2.2 FromStream()

```
\begin{tabular}{lll} {\tt Static Page VectSharp.SVG.Parser.FromStream (} \\ {\tt Stream } \begin{tabular}{lll} {\tt Styson} & {\tt Styson} & {\tt Styson} \\ {\tt Stream } \begin{tabular}{lll} {\tt Styson} & {\tt Styson} & {\tt Styson} \\ {\tt Styson} & {\tt Styson} & {\tt Styson} \\ {\tt Styson} & {\tt Styson} & {\tt Styson} \\ {\tt Styson} & {\tt Styson} & {\tt Styson} \\ {\tt Styson} & {\tt Styson} & {\tt Styson} \\ {\tt Styson} & {\tt Styson} & {\tt Styson} \\ {\tt Styson} & {\tt Styson} & {\tt Styson} \\ {\tt Styson} & {\tt Styson} & {\tt Styson} \\ {\tt Styson} & {\tt Styson} & {\tt Styson} \\ {\tt Styson} & {\tt Styson} & {\tt Styson} \\ {\tt Styson} & {\tt Styson} & {\tt Styson} \\ {\tt Styson} & {\tt Styson} & {\tt Styson} \\ {\tt Styson} & {\tt Styson} & {\tt Styson} \\ {\tt Styson} & {\tt Styson} & {\tt Styson} \\ {\tt Styson} & {\tt Styson} & {\tt Styson} \\ {\tt Styson} & {\tt Styson} & {\tt Styson} \\ {\tt Styson} & {\tt Styson} & {\tt Styson} \\ {\tt Styson} & {\tt Styson} & {\tt Styson} \\ {\tt Styson} & {\tt Styson} & {\tt Styson} \\ {\tt Styson} & {\tt Styson} & {\tt Styson} \\ {\tt Styson} & {\tt Styson} & {\tt Styson} \\ {\tt Styson} & {\tt Styson} & {\tt Styson} \\ {\tt Styson} & {\tt Styson} & {\tt Styson} \\ {\tt Styson} & {\tt Styson} & {\tt Styson} \\ {\tt Styson} & {\tt Styson} & {\tt Styson} \\ {\tt Styson} & {\tt Styson} & {\tt Styson} \\ {\tt Styson} & {\tt Styson} & {\tt Styson} \\ {\tt Styson} & {\tt Styson} & {\tt Styson} \\ {\tt Styson} & {\tt Styson} & {\tt Styson} \\ {\tt Styson} & {\tt Styson} & {\tt Styson} \\ {\tt Styson} & {\tt Styson} & {\tt Styson} \\ {\tt Styson} & {\tt Styson} & {\tt Styson} \\ {\tt Styson} & {\tt Styson} & {\tt Styson} \\ {\tt Styson} & {\tt Styson} & {\tt Styson} \\ {\tt Styson} & {\tt Styson} & {\tt Styson} \\ {\tt Styson} & {\tt Styson} & {\tt Styson} \\ {\tt Styson} & {\tt Styson} & {\tt Styson} \\ {\tt Styson} & {\tt Styson} & {\tt Styson} \\ {\tt Styson} & {\tt Styson} & {\tt Styson} \\ {\tt Styson} & {\tt Styson} \\ {\tt Styson} & {\tt Styson} & {\tt Styson} \\ {\tt Styson} & {\tt Styson} \\ {\tt Styson} & {\tt Styson} \\ {\tt Styson} & {\tt Styson} & {\tt Styson} \\ {\tt Stys
```

Parses an stream containing SVG source code into a Page containing the image represented by the code.

Parameters

```
svgSourceStream  The stream containing SVG source code.
```

Returns

A Page containing the image represented by the svgSourceStream.

Definition at line 154 of file SVGParser.cs.

6.30.2.3 FromString()

```
static Page VectSharp.SVG.Parser.FromString ( string \ svgSource \ ) \ \ [static]
```

Parses SVG source into a Page containing the image represented by the code.

Parameters

svgSource The SVG source code.

Returns

A Page containing the image represented by the svgSource .

Definition at line 102 of file SVGParser.cs.

6.30.2.4 ParseSVGURI()

Parses an SVG image URI.

Parameters

uri	The image URI to parse.
ignored	This value is ignored and is only needed for compatibility.

Returns

A Page containing the parsed SVG image, or null.

Definition at line 53 of file SVGParser.cs.

6.30.3 Member Data Documentation

6.30.3.1 ParselmageURI

```
Func<string, bool, Page> VectSharp.SVG.Parser.ParseImageURI [static]
```

A function that takes as input an image URI and a boolean value indicating whether the image should be interpolated, and returns a Page object containing the image. By default, this is equal to ParseSVGURI, i.e. it is only able

to parse SVG images. If you wish to enable the parsing of other formats, you should install the "VectSharp.MuP←DFUtils" NuGet package and enable the parser in your program by doing something like:

VectSharp.SVG.Parser.ParseImageURI = VectSharp.MuPDFUtils.ImageURIParser.Parser(VectSharp.

Definition at line 45 of file SVGParser.cs.

The documentation for this class was generated from the following file:

· VectSharp.SVG/SVGParser.cs

6.31 VectSharp.PDF.PDFContextInterpreter Class Reference

Contains methods to render a Document as a PDF document.

Public Types

enum TextOptions { TextOptions.SubsetFonts, TextOptions.ConvertIntoPaths }
 Defines whether the used fonts should be included in the file.

Static Public Member Functions

- static void SaveAsPDF (this Document document, string fileName, TextOptions textOption=TextOptions.SubsetFonts, bool compressStreams=true, Dictionary< string, string > linkDestinations=null)
 - Save the document to a PDF file.
- static void SaveAsPDF (this Document document, Stream stream, TextOptions textOption=TextOptions.SubsetFonts, bool compressStreams=true, Dictionary< string, string > linkDestinations=null)

Save the document to a PDF stream.

6.31.1 Detailed Description

Contains methods to render a Document as a PDF document.

Definition at line 585 of file PDFContext.cs.

6.31.2 Member Enumeration Documentation

6.31.2.1 TextOptions

enum VectSharp.PDF.PDFContextInterpreter.TextOptions [strong]

Defines whether the used fonts should be included in the file.

Enumerator

SubsetFonts	Embeds subsetted font files containing only the glyphs for the characters that have been used.	
ConvertIntoPaths	Does not embed any font file and converts all text items into paths.	

Definition at line 774 of file PDFContext.cs.

6.31.3 Member Function Documentation

6.31.3.1 SaveAsPDF() [1/2]

Save the document to a PDF stream.

Parameters

document	The Document to save.
stream	The stream to which the PDF data will be written.
textOption	Defines whether the used fonts should be included in the file.
compressStreams	Indicates whether the streams in the PDF file should be compressed.
linkDestinations	A dictionary associating element tags to link targets. If this is provided, objects that have been drawn with a tag contained in the dictionary will become hyperlink to the destination specified in the dictionary. If the destination starts with a hash (#), it is interpreted as the tag of another object in the current document; otherwise, it is interpreted as an external URI.

Definition at line 797 of file PDFContext.cs.

6.31.3.2 SaveAsPDF() [2/2]

Save the document to a PDF file.

Parameters

document	The Document to save.
fileName	The full path to the file to save. If it exists, it will be overwritten.
textOption	Defines whether the used fonts should be included in the file.
compressStreams	Indicates whether the streams in the PDF file should be compressed.
linkDestinations	A dictionary associating element tags to link targets. If this is provided, objects that have been drawn with a tag contained in the dictionary will become hyperlink to the destination specified in the dictionary. If the destination starts with a hash (#), it is interpreted as the tag of another object in the current document; otherwise, it is interpreted as an external URI.

Definition at line 763 of file PDFContext.cs.

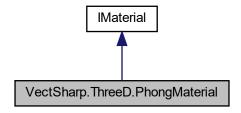

The documentation for this class was generated from the following file:

· VectSharp.PDF/PDFContext.cs

6.32 VectSharp.ThreeD.PhongMaterial Class Reference

Represents a material that uses a Phong reflection model to determine the colour of the material based on the light sources that hit it.

Inheritance diagram for VectSharp.ThreeD.PhongMaterial:

Public Member Functions

• PhongMaterial (Colour colour)

Creates a new PhongMaterial instance.

Colour GetColour (Point3D point, NormalizedVector3D surfaceNormal, Camera camera, IList< ILightSource
 lights, IList< double > obstructions)

Obtains the Colour at the specified point.

Properties

• Colour Colour [get]

The base colour of the material.

• double AmbientReflectionCoefficient = 1 [get, set]

A coefficient determining how much ambient light is reflected by the material.

• double DiffuseReflectionCoefficient = 1 [get, set]

A coefficient determining how much directional light is reflected by the material.

• double SpecularReflectionCoefficient = 1 [get, set]

A coefficient determining the intensity of specular highlights.

• double SpecularShininess = 1 [get, set]

A coefficient determining the extent of specular highlights.

6.32.1 Detailed Description

Represents a material that uses a Phong reflection model to determine the colour of the material based on the light sources that hit it.

Definition at line 57 of file Materials.cs.

6.32.2 Constructor & Destructor Documentation

6.32.2.1 PhongMaterial()

Creates a new PhongMaterial instance.

Parameters

colour	The base colour of the material.

Definition at line 94 of file Materials.cs.

6.32.3 Property Documentation

6.32.3.1 AmbientReflectionCoefficient

```
double VectSharp.ThreeD.PhongMaterial.AmbientReflectionCoefficient = 1 [get], [set]
```

A coefficient determining how much ambient light is reflected by the material.

Definition at line 73 of file Materials.cs.

6.32.3.2 Colour

```
Colour VectSharp.ThreeD.PhongMaterial.Colour [get]
```

The base colour of the material.

Definition at line 62 of file Materials.cs.

6.32.3.3 DiffuseReflectionCoefficient

```
double VectSharp.ThreeD.PhongMaterial.DiffuseReflectionCoefficient = 1 [get], [set]
```

A coefficient determining how much directional light is reflected by the material.

Definition at line 78 of file Materials.cs.

6.32.3.4 SpecularReflectionCoefficient

```
double VectSharp.ThreeD.PhongMaterial.SpecularReflectionCoefficient = 1 [get], [set]
```

A coefficient determining the intensity of specular highlights.

Definition at line 83 of file Materials.cs.

6.32.3.5 SpecularShininess

```
double VectSharp.ThreeD.PhongMaterial.SpecularShininess = 1 [get], [set]
```

A coefficient determining the extent of specular highlights.

Definition at line 88 of file Materials.cs.

The documentation for this class was generated from the following file:

· VectSharp.ThreeD/Materials.cs

6.33 VectSharp.Point Struct Reference

Represents a point relative to an origin in the top-left corner.

Public Member Functions

• Point (double x, double y)

Create a new Point.

• double Modulus ()

Computes the modulus of the vector represented by the Point.

• Point Normalize ()

Normalises a Point.

• bool IsEqual (Point p2, double tolerance)

Checks whether this Point is equal to another Point, up to a specified tolerance.

Public Attributes

double X

Horizontal (x) coordinate, measured to the right of the origin.

· double Y

Vertical (y) coordinate, measured to the bottom of the origin.

6.33.1 Detailed Description

Represents a point relative to an origin in the top-left corner.

Definition at line 1228 of file Graphics.cs.

6.33.2 Constructor & Destructor Documentation

6.33.2.1 Point()

```
\begin{tabular}{ll} \beg
```

Create a new Point.

Parameters

X	The horizontal (x) coordinate.	
У	The vertical (y) coordinate.	

Definition at line 1245 of file Graphics.cs.

6.33.3 Member Function Documentation

6.33.3.1 IsEqual()

```
bool VectSharp.Point.IsEqual (  \begin{array}{c} \text{Point } p2,\\ \\ \text{double } tolerance \end{array})
```

Checks whether this Point is equal to another Point, up to a specified tolerance.

Parameters

p2	The Point to compare.
tolerance	The tolerance threshold.

Returns

```
true if both coordinates of the Points are closer than tolerance or if their relative difference (i.e. (a - b) / (a + b) * 2) is smaller than tolerance. false otherwise.
```

Definition at line 1276 of file Graphics.cs.

6.33.3.2 Modulus()

```
double VectSharp.Point.Modulus ( )
```

Computes the modulus of the vector represented by the Point.

Returns

The modulus of the vector represented by the Point.

Definition at line 1255 of file Graphics.cs.

6.33.3.3 Normalize()

```
Point VectSharp.Point.Normalize ( )
```

Normalises a Point.

Returns

The normalised Point.

Definition at line 1264 of file Graphics.cs.

6.33.4 Member Data Documentation

6.33.4.1 X

double VectSharp.Point.X

Horizontal (x) coordinate, measured to the right of the origin.

Definition at line 1233 of file Graphics.cs.

6.33.4.2 Y

double VectSharp.Point.Y

Vertical (y) coordinate, measured to the bottom of the origin.

Definition at line 1238 of file Graphics.cs.

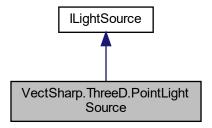

The documentation for this struct was generated from the following file:

· VectSharp/Graphics.cs

6.34 VectSharp.ThreeD.PointLightSource Class Reference

Represents a point light source.

Inheritance diagram for VectSharp.ThreeD.PointLightSource:

Public Member Functions

• PointLightSource (double intensity, Point3D position)

Creates a new PointLightSource instance.

LightIntensity GetLightAt (Point3D point)

Computes the light intensity at the specified point, without taking into account any obstructions.

double GetObstruction (Point3D point, IEnumerable < Triangle3DElement > shadowingTriangles)

Determines the amount of obstruction of the light that results at point due to the specified shadowing Triangles .

Properties

```
• bool CastsShadow = true [get, set]
```

• Point3D Position [get, set]

The position of the light source.

• double Intensity [get, set]

The base intensity of the light.

• double DistanceAttenuationExponent = 2 [get, set]

An exponent determining how fast the light attenuates with increasing distance. Set to 0 to disable distance attenuation.

6.34.1 Detailed Description

Represents a point light source.

Definition at line 167 of file Lights.cs.

6.34.2 Constructor & Destructor Documentation

6.34.2.1 PointLightSource()

Creates a new PointLightSource instance.

Parameters

intensity	The intensity of the light.
position	The position of the light source.

Definition at line 192 of file Lights.cs.

6.34.3 Property Documentation

6.34.3.1 DistanceAttenuationExponent

```
double VectSharp.ThreeD.PointLightSource.DistanceAttenuationExponent = 2 [get], [set]
```

An exponent determining how fast the light attenuates with increasing distance. Set to 0 to disable distance attenuation.

Definition at line 185 of file Lights.cs.

6.34.3.2 Intensity

```
double VectSharp.ThreeD.PointLightSource.Intensity [get], [set]
```

The base intensity of the light.

Definition at line 180 of file Lights.cs.

6.34.3.3 Position

```
Point3D VectSharp.ThreeD.PointLightSource.Position [get], [set]
```

The position of the light source.

Definition at line 175 of file Lights.cs.

The documentation for this class was generated from the following file:

· VectSharp.ThreeD/Lights.cs

6.35 VectSharp.Raster.Raster Class Reference

Contains methods to render a page to a PNG image.

Static Public Member Functions

- static void SaveAsPNG (this Page page, string fileName, double scale=1)

 Render the page to a PNG file.
- static void SaveAsPNG (this Page page, Stream stream, double scale=1)

 Render the page to a PNG stream.

6.35.1 Detailed Description

Contains methods to render a page to a PNG image.

Definition at line 27 of file Raster.cs.

6.35.2 Member Function Documentation

6.35.2.1 SaveAsPNG() [1/2]

Render the page to a PNG stream.

Parameters

page	The Page to render.
stream	The stream to which the PNG data will be written.
scale	The scale to be used when rasterising the page. This will determine the width and height of the image file.

Definition at line 59 of file Raster.cs.

6.35.2.2 SaveAsPNG() [2/2]

Render the page to a PNG file.

Parameters

page	The Page to render.
fileName	The full path to the file to save. If it exists, it will be overwritten.
scale	The scale to be used when rasterising the page. This will determine the width and height of the image file.

Definition at line 36 of file Raster.cs.

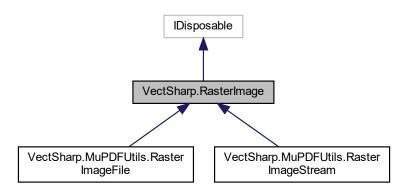

The documentation for this class was generated from the following file:

· VectSharp.Raster/Raster.cs

6.36 VectSharp.RasterImage Class Reference

Represents a raster image, created from raw pixel data. Consider using the derived classes included in the NuGet package "VectSharp.MuPDFUtils" if you need to load a raster image from a file or a Stream.

Inheritance diagram for VectSharp.RasterImage:

Public Member Functions

- RasterImage (IntPtr pixelData, int width, int height, bool hasAlpha, bool interpolate)
 - Creates a new RasterImage instance from the specified pixel data in RGB or RGBA format.
- RasterImage (ref DisposableIntPtr pixelData, int width, int height, bool hasAlpha, bool interpolate)
 - Creates a new RasterImage instance from the specified pixel data in RGB or RGBA format.
- RasterImage (byte[] data, int width, int height, PixelFormats pixelFormat, bool interpolate)
 - Creates a new Rasterlmage instance copying the specified pixel data.
- void ClearPNGCache ()
 - Disposes the PNGStream. Also useful if is is necessary to regenerate it, e.g. because the underlying image pixel data has changed.
- void Dispose ()

Properties

- IntPtr ImageDataAddress [get]
 - The memory address of the image pixel data.
- IDisposable DataHolder [get]
 - An IDisposable that will be disposed when the image is disposed.
- string ld [get]
 - A univocal identifier for this image.
- bool HasAlpha [get]
 - Determines whether the image has an alpha channel.

```
• int Width [get]
```

The width in pixels of the image.

• int Height [get]

The height in pixels of the image.

• bool Interpolate [get]

Determines whether the image should be interpolated when it is resized.

• MemoryStream PNGStream [get]

Contains a representation of the image in PNG format. Generated at the first access and cached until the image is disposed.

6.36.1 Detailed Description

Represents a raster image, created from raw pixel data. Consider using the derived classes included in the NuGet package "VectSharp.MuPDFUtils" if you need to load a raster image from a file or a Stream.

Definition at line 98 of file RasterImage.cs.

6.36.2 Constructor & Destructor Documentation

6.36.2.1 RasterImage() [1/3]

Creates a new RasterImage instance from the specified pixel data in RGB or RGBA format.

Parameters

pixelData	The address of the image pixel data in RGB or RGBA format.
width	The width in pixels of the image.
height	The height in pixels of the image.
hasAlpha	true if the image is in RGBA format, false if it is in RGB format.
interpolate	Whether the image should be interpolated when it is resized.

Definition at line 170 of file RasterImage.cs.

6.36.2.2 RasterImage() [2/3]

```
int width,
int height,
bool hasAlpha,
bool interpolate )
```

Creates a new RasterImage instance from the specified pixel data in RGB or RGBA format.

Parameters

pixelData	The address of the image pixel data in RGB or RGBA format wrapped in a DisposableIntPtr. The RasterImage will take ownership of this memory.
width	The width in pixels of the image.
height	The height in pixels of the image.
hasAlpha	true if the image is in RGBA format, false if it is in RGB format.
interpolate	Whether the image should be interpolated when it is resized.

Definition at line 188 of file RasterImage.cs.

6.36.2.3 RasterImage() [3/3]

Creates a new RasterImage instance copying the specified pixel data.

Parameters

data	The image pixel data that will be copied.
width	The width in pixels of the image.
height	The height in pixels of the image.
pixelFormat	The format of the pixel data.
interpolate	Whether the image should be interpolated when it is resized.

Definition at line 207 of file RasterImage.cs.

6.36.3 Member Function Documentation

6.36.3.1 ClearPNGCache()

```
void VectSharp.RasterImage.ClearPNGCache ( )
```

Disposes the PNGStream. Also useful if is is necessary to regenerate it, e.g. because the underlying image pixel data has changed.

Definition at line 261 of file RasterImage.cs.

6.36.4 Property Documentation

6.36.4.1 DataHolder

```
IDisposable VectSharp.RasterImage.DataHolder [get]
```

An IDisposable that will be disposed when the image is disposed.

Definition at line 108 of file Rasterlmage.cs.

6.36.4.2 HasAlpha

```
bool VectSharp.RasterImage.HasAlpha [get]
```

Determines whether the image has an alpha channel.

Definition at line 118 of file RasterImage.cs.

6.36.4.3 Height

```
int VectSharp.RasterImage.Height [get]
```

The height in pixels of the image.

Definition at line 128 of file RasterImage.cs.

6.36.4.4 Id

```
string VectSharp.RasterImage.Id [get]
```

A univocal identifier for this image.

Definition at line 113 of file RasterImage.cs.

6.36.4.5 ImageDataAddress

```
IntPtr VectSharp.RasterImage.ImageDataAddress [get]
```

The memory address of the image pixel data.

Definition at line 103 of file RasterImage.cs.

6.36.4.6 Interpolate

```
bool VectSharp.RasterImage.Interpolate [get]
```

Determines whether the image should be interpolated when it is resized.

Definition at line 133 of file RasterImage.cs.

6.36.4.7 PNGStream

```
MemoryStream VectSharp.RasterImage.PNGStream [get]
```

Contains a representation of the image in PNG format. Generated at the first access and cached until the image is disposed.

Definition at line 140 of file RasterImage.cs.

6.36.4.8 Width

```
int VectSharp.RasterImage.Width [get]
```

The width in pixels of the image.

Definition at line 123 of file RasterImage.cs.

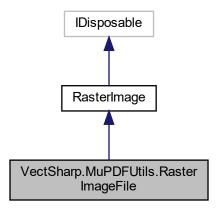

The documentation for this class was generated from the following file:

VectSharp/RasterImage.cs

6.37 VectSharp.MuPDFUtils.RasterImageFile Class Reference

A RasterImage created from a file.

Inheritance diagram for VectSharp.MuPDFUtils.RasterImageFile:

Public Member Functions

• RasterImageFile (string fileName, int pageNumber=0, double scale=1, bool alpha=true, bool interpolate=true)

Creates a new RasterImage from the specified file.

Additional Inherited Members

6.37.1 Detailed Description

A RasterImage created from a file.

Definition at line 28 of file RasterImages.cs.

6.37.2 Constructor & Destructor Documentation

6.37.2.1 RasterImageFile()

Creates a new RasterImage from the specified file.

Parameters

fileName	The path to the file containing the image.
pageNumber	The number of the page in the file from which the image should be created, starting at 0. Only useful for multi-page formats, such as PDF.
scale	The scale factor at which to render the image.
alpha	A boolean value indicating whether transparency (alpha) data from the image should be preserved or not.
interpolate	A boolean value indicating whether the image should be interpolated when it is resized or not.

Definition at line 38 of file RasterImages.cs.

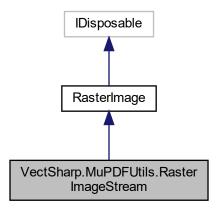

The documentation for this class was generated from the following file:

• VectSharp.MuPDFUtils/RasterImages.cs

6.38 VectSharp.MuPDFUtils.RasterImageStream Class Reference

A RasterImage created from a stream.

Inheritance diagram for VectSharp.MuPDFUtils.RasterImageStream:

Public Member Functions

• RasterImageStream (Stream imageStream, InputFileTypes fileType, int pageNumber=0, double scale=1, bool alpha=true, bool interpolate=true)

Creates a new RasterImage from the specified stream.

• RasterImageStream (IntPtr imageAddress, long imageLength, InputFileTypes fileType, int pageNumber=0, double scale=1, bool alpha=true, bool interpolate=true)

Creates a new Rasterlmage from the specified stream.

Additional Inherited Members

6.38.1 Detailed Description

A RasterImage created from a stream.

Definition at line 69 of file RasterImages.cs.

6.38.2 Constructor & Destructor Documentation

6.38.2.1 RasterImageStream() [1/2]

Creates a new RasterImage from the specified stream.

Parameters

imageStream	The stream containing the image data.
fileType	The type of the image contained in the stream.
pageNumber	The number of the page in the file from which the image should be created, starting at 0. Only useful for multi-page formats, such as PDF.
scale	The scale factor at which to render the image.
alpha	A boolean value indicating whether transparency (alpha) data from the image should be preserved or not.
interpolate	A boolean value indicating whether the image should be interpolated when it is resized or not.

Definition at line 80 of file RasterImages.cs.

6.38.2.2 RasterImageStream() [2/2]

Creates a new RasterImage from the specified stream.

Parameters

imageAddress	A pointer to the address where the image data is contained.
imageLength	The length in bytes of the image data.
fileType	The type of the image contained in the stream.
pageNumber	The number of the page in the file from which the image should be created, starting at 0. Only useful for multi-page formats, such as PDF.
scale	The scale factor at which to render the image.
alpha	A boolean value indicating whether transparency (alpha) data from the image should be preserved or not.
interpolate	A boolean value indicating whether the image should be interpolated when it is resized or not.

Definition at line 148 of file RasterImages.cs.

The documentation for this class was generated from the following file:

VectSharp.MuPDFUtils/RasterImages.cs

6.39 VectSharp.Canvas.RenderAction Class Reference

Represents a light-weight rendering action.

Public Types

enum ActionTypes { ActionTypes.Path, ActionTypes.Text, ActionTypes.RasterImage }
 Types of rendering actions.

Public Member Functions

void BringToFront ()

Brings the render action to the front of the rendering queue. This method can only be invoked after the output has been fully initialised.

· void SendToBack ()

Brings the render action to the back of the rendering queue. This method can only be invoked after the output has been fully initialised.

Static Public Member Functions

• static RenderAction PathAction (Geometry geometry, Pen stroke, IBrush fill, Avalonia.Matrix transform, Geometry clippingPath, string tag=null)

Creates a new RenderAction representing a Path.

• static RenderAction TextAction (FormattedText text, IBrush fill, Avalonia.Matrix transform, Geometry clippingPath, string tag=null)

Creates a new RenderAction representing text.

• static RenderAction ImageAction (string imageId, Avalonia.Rect sourceRect, Avalonia.Rect destinationRect, Avalonia.Matrix transform, Geometry clippingPath, string tag=null)

Creates a new RenderAction representing an image.

Properties

ActionTypes ActionType [get]

Type of the rendering action.

Geometry Geometry [get, set]

Geometry that needs to be rendered (null if the action type is ActionTypes.Text). If you change this, you need to invalidate the Parent's visual.

• FormattedText Text [get, set]

Text that needs to be rendered (null if the action type is ActionTypes.Path). If you change this, you need to invalidate the Parent's visual.

• Pen Stroke [get, set]

Rendering stroke (null if the action type is ActionTypes.Text or if the rendered action only has a Fill). If you change this, you need to invalidate the Parent's visual.

• IBrush Fill [get, set]

Rendering fill (null if the rendered action only has a Stroke). If you change this, you need to invalidate the Parent's visual.

• string lmageId [get, set]

Univocal identifier of the image that needs to be drawn.

• Avalonia.? Rect ImageSource [get, set]

The source rectangle of the image.

• Avalonia.? Rect ImageDestination [get, set]

The destination rectangle of the image.

• Geometry ClippingPath [get, set]

The current clipping path.

• Avalonia.Matrix InverseTransform = Avalonia.Matrix.Identity [get]

Inverse transformation matrix.

• Avalonia.Matrix Transform [get, set]

Rendering transformation matrix. If you change this, you need to invalidate the Parent's visual.

• string Tag [get, set]

A tag to access the RenderAction.

• Avalonia.Controls.Canvas Parent [get]

The container of this RenderAction.

Events

• EventHandler< Avalonia.Input.PointerEventArgs > PointerEnter

Raised when the pointer enters the area covered by the RenderAction.

• EventHandler< Avalonia.Input.PointerEventArgs > PointerLeave

Raised when the pointer leaves the area covered by the RenderAction.

EventHandler< Avalonia.Input.PointerPressedEventArgs > PointerPressed

Raised when the pointer is pressed while over the area covered by the RenderAction.

EventHandler< Avalonia.Input.PointerReleasedEventArgs > PointerReleased

Raised when the pointer is released after a PointerPressed event.

6.39.1 Detailed Description

Represents a light-weight rendering action.

Definition at line 1013 of file AvaloniaContext.cs.

6.39.2 Member Enumeration Documentation

6.39.2.1 ActionTypes

```
enum VectSharp.Canvas.RenderAction.ActionTypes [strong]
```

Types of rendering actions.

Enumerator

Path	The render action represents a path object.
Text	The render action represents a text object.
RasterImage	The render action represents a raster image.

Definition at line 1018 of file AvaloniaContext.cs.

6.39.3 Member Function Documentation

6.39.3.1 BringToFront()

```
void VectSharp.Canvas.RenderAction.BringToFront ( )
```

Brings the render action to the front of the rendering queue. This method can only be invoked after the output has been fully initialised.

Definition at line 1239 of file AvaloniaContext.cs.

6.39.3.2 ImageAction()

Creates a new RenderAction representing an image.

Parameters

imageld	The univocal identifier of the image to draw.
sourceRect	The source rectangle of the image.
destinationRect	The destination rectangle of the image. Generated by Doxygen
transform	The transform that will be applied to the image.
clippingPath	The clipping path.
tan	A tag to access the RenderAction. If this is null this RenderAction is not visible in the hit test

Returns

Definition at line 1222 of file AvaloniaContext.cs.

6.39.3.3 PathAction()

```
static RenderAction VectSharp.Canvas.RenderAction.PathAction (
    Geometry geometry,
    Pen stroke,
    IBrush fill,
    Avalonia.Matrix transform,
    Geometry clippingPath,
    string tag = null ) [static]
```

Creates a new RenderAction representing a Path.

Parameters

geometry	The geometry to be rendered.
stroke	The stroke of the path (can be null).
fill	The fill of the path (can be null).
transform	The transform that will be applied to the path.
clippingPath	The clipping path.
tag	A tag to access the RenderAction. If this is null this RenderAction is not visible in the hit test.

Returns

A new RenderAction representing a Path.

Definition at line 1175 of file AvaloniaContext.cs.

6.39.3.4 SendToBack()

```
void VectSharp.Canvas.RenderAction.SendToBack ( )
```

Brings the render action to the back of the rendering queue. This method can only be invoked after the output has been fully initialised.

Definition at line 1247 of file AvaloniaContext.cs.

6.39.3.5 TextAction()

Creates a new RenderAction representing text.

Parameters

text	The text to be rendered.	
fill	The fill of the text (can be null).	
transform	The transform that will be applied to the text.	
clippingPath	The clipping path.	
tag	A tag to access the RenderAction. If this is null this RenderAction is not visible in the hit test.	

Returns

Definition at line 1198 of file AvaloniaContext.cs.

6.39.4 Property Documentation

6.39.4.1 ActionType

```
ActionTypes VectSharp.Canvas.RenderAction.ActionType [get]
```

Type of the rendering action.

Definition at line 1039 of file AvaloniaContext.cs.

6.39.4.2 ClippingPath

```
Geometry VectSharp.Canvas.RenderAction.ClippingPath [get], [set]
```

The current clipping path.

Definition at line 1079 of file AvaloniaContext.cs.

6.39.4.3 Fill

```
IBrush VectSharp.Canvas.RenderAction.Fill [get], [set]
```

Rendering fill (null if the rendered action only has a Stroke). If you change this, you need to invalidate the Parent's visual.

Definition at line 1059 of file AvaloniaContext.cs.

6.39.4.4 Geometry

```
Geometry VectSharp.Canvas.RenderAction.Geometry [get], [set]
```

Geometry that needs to be rendered (null if the action type is ActionTypes.Text). If you change this, you need to invalidate the Parent's visual.

Definition at line 1044 of file AvaloniaContext.cs.

6.39.4.5 ImageDestination

```
Avalonia.? Rect VectSharp.Canvas.RenderAction.ImageDestination [get], [set]
```

The destination rectangle of the image.

Definition at line 1074 of file AvaloniaContext.cs.

6.39.4.6 Imageld

```
string VectSharp.Canvas.RenderAction.ImageId [get], [set]
```

Univocal identifier of the image that needs to be drawn.

Definition at line 1064 of file AvaloniaContext.cs.

6.39.4.7 ImageSource

```
Avalonia.? Rect VectSharp.Canvas.RenderAction.ImageSource [get], [set]
```

The source rectangle of the image.

Definition at line 1069 of file AvaloniaContext.cs.

6.39.4.8 InverseTransform

Avalonia.Matrix VectSharp.Canvas.RenderAction.InverseTransform = Avalonia.Matrix.Identity [qet]

Inverse transformation matrix.

Definition at line 1086 of file AvaloniaContext.cs.

6.39.4.9 Parent

Avalonia.Controls.Canvas VectSharp.Canvas.RenderAction.Parent [get]

The container of this RenderAction.

Definition at line 1111 of file AvaloniaContext.cs.

6.39.4.10 Stroke

```
Pen VectSharp.Canvas.RenderAction.Stroke [get], [set]
```

Rendering stroke (null if the action type is ActionTypes.Text or if the rendered action only has a Fill). If you change this, you need to invalidate the Parent's visual.

Definition at line 1054 of file AvaloniaContext.cs.

6.39.4.11 Tag

```
string VectSharp.Canvas.RenderAction.Tag [get], [set]
```

A tag to access the RenderAction.

Definition at line 1104 of file AvaloniaContext.cs.

6.39.4.12 Text

```
FormattedText VectSharp.Canvas.RenderAction.Text [get], [set]
```

Text that needs to be rendered (null if the action type is ActionTypes.Path). If you change this, you need to invalidate the Parent's visual.

Definition at line 1049 of file AvaloniaContext.cs.

6.39.4.13 Transform

Avalonia.Matrix VectSharp.Canvas.RenderAction.Transform [get], [set]

Rendering transformation matrix. If you change this, you need to invalidate the Parent's visual.

Definition at line 1091 of file AvaloniaContext.cs.

6.39.5 Event Documentation

6.39.5.1 PointerEnter

EventHandler<Avalonia.Input.PointerEventArgs> VectSharp.Canvas.RenderAction.PointerEnter

Raised when the pointer enters the area covered by the RenderAction.

Definition at line 1122 of file AvaloniaContext.cs.

6.39.5.2 PointerLeave

 ${\tt EventHandler}. {\tt Canvas.RenderAction.PointerEventArgs} > {\tt VectSharp.Canvas.RenderAction.PointerLeave} \\$

Raised when the pointer leaves the area covered by the RenderAction.

Definition at line 1127 of file AvaloniaContext.cs.

6.39.5.3 PointerPressed

 $\label{lem:convex_pointer} \mbox{EventArgs} > \mbox{VectSharp.Canvas.RenderAction.Pointer} \leftarrow \mbox{Pressed}$

Raised when the pointer is pressed while over the area covered by the RenderAction.

Definition at line 1132 of file AvaloniaContext.cs.

6.39.5.4 PointerReleased

EventHandler<Avalonia.Input.PointerReleasedEventArgs> VectSharp.Canvas.RenderAction.Pointer← Released

Raised when the pointer is released after a PointerPressed event.

Definition at line 1137 of file AvaloniaContext.cs.

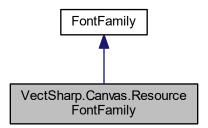

The documentation for this class was generated from the following file:

· VectSharp.Canvas/AvaloniaContext.cs

6.40 VectSharp.Canvas.ResourceFontFamily Class Reference

Represents a FontFamily created from a resource stream.

Inheritance diagram for VectSharp.Canvas.ResourceFontFamily:

Public Member Functions

• ResourceFontFamily (System.IO.Stream resourceStream, string resourceName)

Create a new ResourceFontFamily from the specified resourceStream containing a TTF file, passing the specified resourceName to the Avalonia.Media.FontFamily.Parse(string, Uri) method.

Additional Inherited Members

6.40.1 Detailed Description

Represents a FontFamily created from a resource stream.

Definition at line 31 of file AvaloniaContext.cs.

6.40.2 Constructor & Destructor Documentation

6.40.2.1 ResourceFontFamily()

Create a new ResourceFontFamily from the specified *resourceStream* containing a TTF file, passing the specified *resourceName* to the Avalonia.Media.FontFamily.Parse(string, Uri) method.

Parameters

resourceStream	A resource stream containing a TTF file.
resourceName	The name of the embedded resource, which will be parsed using Avalonia.Media.FontFamily.Parse(string, Uri).

Definition at line 40 of file AvaloniaContext.cs.

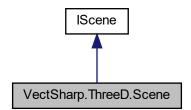

The documentation for this class was generated from the following file:

• VectSharp.Canvas/AvaloniaContext.cs

6.41 VectSharp.ThreeD.Scene Class Reference

Represents a 3D scene.

Inheritance diagram for VectSharp.ThreeD.Scene:

Public Member Functions

• Scene ()

Creates a new Scene.

void AddElement (Element3D element)

Adds the specified element to the scene.

void AddRange (IEnumerable < Element3D > elements)

Adds the specified elements to the scene.

void Replace (Func< Element3D, Element3D > replacementFunction)

Replaces each element in the scene with the element returned by the replacementFunction .

void Replace (Func< Element3D, IEnumerable< Element3D >> replacementFunction)

Replaces each element in the scene with the element(s) returned by the replacementFunction .

Public Attributes

• IEnumerable < Element3D > SceneElements => sceneElements

Properties

• object SceneLock [get]

6.41.1 Detailed Description

Represents a 3D scene.

Definition at line 49 of file Scene.cs.

6.41.2 Constructor & Destructor Documentation

6.41.2.1 Scene()

```
VectSharp.ThreeD.Scene.Scene ( )
```

Creates a new Scene.

Definition at line 62 of file Scene.cs.

The documentation for this class was generated from the following file:

· VectSharp.ThreeD/Scene.cs

6.42 VectSharp.Segment Class Reference

Represents a segment as part of a GraphicsPath.

Public Member Functions

• abstract Segment Clone ()

Creates a copy of the Segment.

abstract double Measure (Point previousPoint)

Computes the length of the Segment.

abstract Point GetPointAt (Point previousPoint, double position)

Gets the point on the Segment at the specified (relative) position).

• abstract Point GetTangentAt (Point previousPoint, double position)

Gets the tangent to the Segment at the specified (relative) position).

abstract IEnumerable < Segment > Linearise (Point? previousPoint, double resolution)

Transform the segment into a series of linear segments. Segments that are already linear are not changed.

• abstract IEnumerable < Point > GetLinearisationTangents (Point? previousPoint, double resolution)

Gets the tanget at the points at which the segment would be linearised.

abstract IEnumerable < Segment > Transform (Func < Point, Point > transformationFunction)

Applies an arbitrary transformation to all of the points of the Segment.

Properties

• abstract SegmentType Type [get]

The type of the Segment.

• Point[] Points [get]

The points used to define the Segment.

• virtual Point Point [get]

The end point of the Segment.

6.42.1 Detailed Description

Represents a segment as part of a GraphicsPath.

Definition at line 1343 of file Graphics.cs.

6.42.2 Member Function Documentation

6.42.2.1 Clone()

```
abstract Segment VectSharp.Segment.Clone ( ) [pure virtual]
```

Creates a copy of the Segment.

Returns

A copy of the Segment.

6.42.2.2 GetLinearisationTangents()

Gets the tanget at the points at which the segment would be linearised.

Parameters

previousPoint	The point from which the Segment starts (i.e. the endpoint of the previous Segment).
resolution	The absolute length between successive samples in curve segments.

Returns

A collection of tangents at the points in which the segment would be linearised.

6.42.2.3 GetPointAt()

Gets the point on the Segment at the specified (relative) position).

Parameters

previousPoint	The point from which the Segment starts (i.e. the endpoint of the previous Segment).
position	The relative position on the Segment (0 is the start of the Segment, 1 is the end of the Segment).

Returns

The point at the specified position.

6.42.2.4 GetTangentAt()

Gets the tangent to the Segment at the specified (relative) position).

Parameters

previousPoint	The point from which the Segment starts (i.e. the endpoint of the previous Segment).
position	The relative position on the Segment (0 is the start of the Segment, 1 is the end of the Segment).

Returns

The tangent to the point at the specified position.

6.42.2.5 Linearise()

Transform the segment into a series of linear segments. Segments that are already linear are not changed.

Parameters

previousPoint	The point from which the Segment starts (i.e. the endpoint of the previous Segment).
resolution	The absolute length between successive samples in curve segments.

Returns

A collection of linear segments that approximate the current segment.

6.42.2.6 Measure()

Computes the length of the Segment.

Parameters

previousPoint	The point from which the Segment starts (i.e. the endpoint of the previous Segment).
---------------	--

Returns

The length of the segment.

6.42.2.7 Transform()

Applies an arbitrary transformation to all of the points of the Segment.

Parameters

transformationFunction	An arbitrary transformation function.

Returns

A collection of Segments that have been transformed according to the transformationFunction.

6.42.3 Property Documentation

6.42.3.1 Point

```
virtual Point VectSharp.Segment.Point [get]
```

The end point of the Segment.

Definition at line 1359 of file Graphics.cs.

6.42.3.2 Points

```
Point [] VectSharp.Segment.Points [get]
```

The points used to define the Segment.

Definition at line 1354 of file Graphics.cs.

6.42.3.3 Type

```
abstract SegmentType VectSharp.Segment.Type [get]
```

The type of the Segment.

Definition at line 1349 of file Graphics.cs.

The documentation for this class was generated from the following file:

· VectSharp/Graphics.cs

6.43 VectSharp.Size Struct Reference

Represents the size of an object.

Public Member Functions

• Size (double width, double height)

Create a new Size.

Public Attributes

· double Width

Width of the object.

• double Height

Height of the object.

6.43.1 Detailed Description

Represents the size of an object.

Definition at line 1285 of file Graphics.cs.

6.43.2 Constructor & Destructor Documentation

6.43.2.1 Size()

Create a new Size.

Parameters

width	The width of the object.
height	The height of the object.

Definition at line 1302 of file Graphics.cs.

6.43.3 Member Data Documentation

6.43.3.1 Height

```
double VectSharp.Size.Height
```

Height of the object.

Definition at line 1295 of file Graphics.cs.

6.43.3.2 Width

double VectSharp.Size.Width

Width of the object.

Definition at line 1290 of file Graphics.cs.

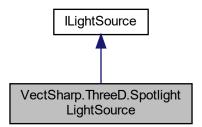

The documentation for this struct was generated from the following file:

· VectSharp/Graphics.cs

6.44 VectSharp.ThreeD.SpotlightLightSource Class Reference

Represents a conic spotlight.

Inheritance diagram for VectSharp.ThreeD.SpotlightLightSource:

Public Member Functions

• SpotlightLightSource (double intensity, Point3D position, NormalizedVector3D direction, double beamWidth ← Angle, double cutoffAngle)

Creates a new SpotlightLightSource instance.

• LightIntensity GetLightAt (Point3D point)

Computes the light intensity at the specified point, without taking into account any obstructions.

double GetObstruction (Point3D point, IEnumerable < Triangle3DElement > shadowingTriangles)

Determines the amount of obstruction of the light that results at point due to the specified shadowing Triangles .

Properties

```
• bool CastsShadow = true [get, set]
```

• Point3D Position [get, set]

The position of the light source.

• NormalizedVector3D Direction [get, set]

The direction of the cone axis.

• double Intensity [get, set]

The base intensity of the light.

• double BeamWidthAngle [get, set]

The angular size of the light cone, in radians.

• double CutoffAngle [get, set]

The angular size of the cutoff cone, in radians.

double DistanceAttenuationExponent = 2 [get, set]

An exponent determining how fast the light attenuates with increasing distance. Set to 0 to disable distance attenuation.

• double AngleAttenuationExponent = 1 [get, set]

An exponent determining how fast the light attenuates between the main light cone and the cutoff cone.

6.44.1 Detailed Description

Represents a conic spotlight.

Definition at line 239 of file Lights.cs.

6.44.2 Constructor & Destructor Documentation

6.44.2.1 SpotlightLightSource()

Creates a new SpotlightLightSource instance.

Parameters

intensity	The intensity of the light.
position	The position of the light source.
direction	The direction of the cone's axis.
beamWidthAngle	The angular size of the light cone, in radians.
cutoffAngle	The angular size of the cutoff cone, in radians.

Definition at line 287 of file Lights.cs.

6.44.3 Property Documentation

6.44.3.1 AngleAttenuationExponent

```
double VectSharp.ThreeD.SpotlightLightSource.AngleAttenuationExponent = 1 [get], [set]
```

An exponent determining how fast the light attenuates between the main light cone and the cutoff cone.

Definition at line 277 of file Lights.cs.

6.44.3.2 BeamWidthAngle

```
double VectSharp.ThreeD.SpotlightLightSource.BeamWidthAngle [get], [set]
```

The angular size of the light cone, in radians.

Definition at line 262 of file Lights.cs.

6.44.3.3 CutoffAngle

```
double VectSharp.ThreeD.SpotlightLightSource.CutoffAngle [get], [set]
```

The angular size of the cutoff cone, in radians.

Definition at line 267 of file Lights.cs.

6.44.3.4 Direction

```
NormalizedVector3D VectSharp.ThreeD.SpotlightLightSource.Direction [get], [set]
```

The direction of the cone axis.

Definition at line 252 of file Lights.cs.

6.44.3.5 DistanceAttenuationExponent

```
double VectSharp.ThreeD.SpotlightLightSource.DistanceAttenuationExponent = 2 [get], [set]
```

An exponent determining how fast the light attenuates with increasing distance. Set to 0 to disable distance attenuation.

Definition at line 272 of file Lights.cs.

6.44.3.6 Intensity

```
double VectSharp.ThreeD.SpotlightLightSource.Intensity [get], [set]
```

The base intensity of the light.

Definition at line 257 of file Lights.cs.

6.44.3.7 Position

```
Point3D VectSharp.ThreeD.SpotlightLightSource.Position [get], [set]
```

The position of the light source.

Definition at line 247 of file Lights.cs.

The documentation for this class was generated from the following file:

· VectSharp.ThreeD/Lights.cs

6.45 VectSharp.SVG.SVGContextInterpreter Class Reference

Contains methods to render a Page as an SVG file.

Public Types

 enum TextOptions { TextOptions.EmbedFonts, TextOptions.SubsetFonts, TextOptions.ConvertIntoPaths, TextOptions.DoNotEmbed }

Defines whether the used fonts should be included in the file.

Static Public Member Functions

• static void SaveAsSVG (this Page page, string fileName, TextOptions textOption=TextOptions.SubsetFonts, Dictionary< string, string > linkDestinations=null)

Render the page to an SVG file.

• static void SaveAsSVG (this Page page, Stream stream, TextOptions textOption=TextOptions.SubsetFonts, Dictionary< string, string > linkDestinations=null)

Render the page to an SVG stream.

6.45.1 Detailed Description

Contains methods to render a Page as an SVG file.

Definition at line 885 of file SVGContext.cs.

6.45.2 Member Enumeration Documentation

6.45.2.1 TextOptions

```
enum VectSharp.SVG.SVGContextInterpreter.TextOptions [strong]
```

Defines whether the used fonts should be included in the file.

Enumerator

EmbedFonts	Embeds the full font files.
SubsetFonts	Embeds subsetted font files containing only the glyphs for the characters that have been
	used.
ConvertIntoPaths	Does not embed any font file and converts all text items into paths.
DoNotEmbed	Does not embed any font file, but still encodes text items as such.

Definition at line 906 of file SVGContext.cs.

6.45.3 Member Function Documentation

6.45.3.1 SaveAsSVG() [1/2]

Render the page to an SVG stream.

Parameters

page	The Page to render.
stream	The stream to which the SVG data will be written.
textOption	Defines whether the used fonts should be included in the file.
linkDestinations	A dictionary associating element tags to link targets. If this is provided, objects that have been drawn with a tag contained in the dictionary will become hyperlink to the destination specified in the dictionary. If the destination starts with a hash (#), it is interpreted as the tag of another object in the current document; otherwise, it is interpreted as an external URI.

Generated by Doxygen

Definition at line 936 of file SVGContext.cs.

6.45.3.2 SaveAsSVG() [2/2]

Render the page to an SVG file.

Parameters

page	The Page to render.
fileName	The full path to the file to save. If it exists, it will be overwritten.
textOption	Defines whether the used fonts should be included in the file.
linkDestinations	A dictionary associating element tags to link targets. If this is provided, objects that have been drawn with a tag contained in the dictionary will become hyperlink to the destination specified in the dictionary. If the destination starts with a hash (#), it is interpreted as the tag of another object in the current document; otherwise, it is interpreted as an external URI.

Definition at line 895 of file SVGContext.cs.

The documentation for this class was generated from the following file:

• VectSharp.SVG/SVGContext.cs

6.46 VectSharp.Markdown.SyntaxHighlighter Class Reference

Contains methods to perform syntax highlighting.

Static Public Member Functions

static List< FormattedString >> GetSyntaxHighlightedLines (string sourceCode, string language)
 Performs syntax highlighting for a specified language on some source code.

6.46.1 Detailed Description

Contains methods to perform syntax highlighting.

Definition at line 56 of file SyntaxHighlighting.cs.

6.46.2 Member Function Documentation

6.46.2.1 GetSyntaxHighlightedLines()

```
\label{list_List_SyntaxHighlighter_GetSyntaxHighlighter_GetSyntaxHighlighted} \begin{tabular}{ll} Lines ( & string $sourceCode, \\ & string $language $) $ [static] \end{tabular}
```

Performs syntax highlighting for a specified language on some source code.

Parameters

sourceCode	The source code to be highlighted.
language	The name of the language to use for the highlighting.

Returns

A list of lists of FormattedStrings. Each list of FormattedStrings represents a line.

Definition at line 112 of file SyntaxHighlighting.cs.

The documentation for this class was generated from the following file:

VectSharp.Markdown/SyntaxHighlighting.cs

6.47 VectSharp.TrueTypeFile Class Reference

Represents a font file in TrueType format. Reference: http://stevehanov.ca/blog/?id=143, https://developer.apple.com/fonts/TrueType-Reference-Manual/, https://docs.⇔microsoft.com/en-us/typography/opentype/spec/

Classes

struct Bearings

Represents the left- and right-side bearings of a glyph.

struct TrueTypePoint

Represents a point in a TrueType path description.

struct VerticalMetrics

Represents the maximum heigth above and depth below the baseline of a glyph.

Public Member Functions

• void Destroy ()

Remove this TrueType file from the cache, clear the tables and release the FontStream. Only call this when the actual file that was used to create this object needs to be changed!

TrueTypeFile SubsetFont (string charactersToInclude, bool consolidateAt32=false, Dictionary< char, char > outputEncoding=null)

Create a subset of the TrueType file, containing only the glyphs for the specified characters.

string GetFontFamilyName ()

Obtains the font family name from the TrueType file.

string GetFontName ()

Obtains the PostScript font name from the TrueType file.

ushort GetFirstCharIndex ()

Returns the index of the first character glyph represented by the font.

ushort GetLastCharIndex ()

Returns the index of the last character glyph represented by the font.

· bool IsItalic ()

Determines whether the typeface is Italic or Oblique or not.

• bool IsOblique ()

Determines whether the typeface is Oblique or not.

· bool IsBold ()

Determines whether the typeface is Bold or not.

bool IsFixedPitch ()

Determines whether the typeface is fixed-pitch (aka monospaces) or not.

bool IsSerif ()

Determines whether the typeface is serifed or not.

· bool IsScript ()

Determines whether the typeface is a script typeface or not.

int GetGlyphIndex (char glyph)

Determines the index of the glyph corresponding to a certain character.

TrueTypePoint[][] GetGlyphPath (int glyphIndex, double size)

Get the path that describes the shape of a glyph.

TrueTypePoint[][] GetGlyphPath (char glyph, double size)

Get the path that describes the shape of a glyph.

double Get1000EmGlyphWidth (char glyph)

Computes the advance width of a glyph, in thousandths of em unit.

double Get1000EmGlyphWidth (int glyphIndex)

Computes the advance width of a glyph, in thousandths of em unit.

double Get1000EmAscent ()

Computes the font ascent, in thousandths of em unit.

• double Get1000EmDescent ()

Computes the font descent, in thousandths of em unit.

double Get1000EmYMax ()

Computes the maximum height over the baseline of the font, in thousandths of em unit.

double Get1000EmYMin ()

Computes the maximum depth below the baseline of the font, in thousandths of em unit.

double Get1000EmXMax ()

Computes the maximum distance to the right of the glyph origin of the font, in thousandths of em unit.

double Get1000EmXMin ()

Computes the maximum distance to the left of the glyph origin of the font, in thousandths of em unit.

Bearings Get1000EmGlyphBearings (char glyph)

Computes the left- and right- side bearings of a glyph, in thousandths of em unit.

VerticalMetrics Get1000EmGlyphVerticalMetrics (char glyph)

Computes the vertical metrics of a glyph, in thousandths of em unit.

Properties

• Stream FontStream [get]

A stream pointing to the TrueType file source (either on disk or in memory). Never dispose this stream directly; if you really need to, call Destroy instead.

6.47.1 Detailed Description

Represents a font file in TrueType format. Reference: http://stevehanov.ca/blog/?id=143, https://developer.apple.com/fonts/TrueType-Reference-Manual/, https://docs. \leftarrow microsoft.com/en-us/typography/opentype/spec/

Definition at line 30 of file TrueType.cs.

6.47.2 Member Function Documentation

6.47.2.1 Destroy()

```
void VectSharp.TrueTypeFile.Destroy ( )
```

Remove this TrueType file from the cache, clear the tables and release the FontStream. Only call this when the actual file that was used to create this object needs to be changed!

Definition at line 52 of file TrueType.cs.

6.47.2.2 Get1000EmAscent()

```
double VectSharp.TrueTypeFile.Get1000EmAscent ( )
```

Computes the font ascent, in thousandths of em unit.

Returns

The font ascent in thousandths of em unit.

Definition at line 2061 of file TrueType.cs.

6.47.2.3 Get1000EmDescent()

```
double VectSharp.TrueTypeFile.Get1000EmDescent ( )
```

Computes the font descent, in thousandths of em unit.

Returns

The font descent in thousandths of em unit.

Definition at line 2071 of file TrueType.cs.

6.47.2.4 Get1000EmGlyphBearings()

```
Bearings VectSharp.TrueTypeFile.Get1000EmGlyphBearings ( {\tt char} \ glyph \ )
```

Computes the left- and right- side bearings of a glyph, in thousandths of em unit.

Parameters

glyph	The glyph whose bearings are to be computed.
-------	--

Returns

The left- and right- side bearings of the glyph in thousandths of em unit

Definition at line 2153 of file TrueType.cs.

6.47.2.5 Get1000EmGlyphVerticalMetrics()

```
\begin{tabular}{ll} Vertical Metrics & VectSharp. True Type File. Get 1000 Em Glyph Vertical Metrics & ( char $glyph$ ) \\ \end{tabular}
```

Computes the vertical metrics of a glyph, in thousandths of em unit.

Parameters

The glyph whose vertical metrics are to be computed.	.
--	---

Returns

The vertical metrics of a glyph, in thousandths of em unit.

Definition at line 2201 of file TrueType.cs.

6.47.2.6 Get1000EmGlyphWidth() [1/2]

```
double VectSharp.TrueTypeFile.Get1000EmGlyphWidth ( {\tt char} \ glyph \ )
```

Computes the advance width of a glyph, in thousandths of em unit.

Parameters

glyph The gl	lyph whose advance width is to be computed.
--------------	---

Returns

The advance width of the glyph in thousandths of em unit.

Definition at line 2032 of file TrueType.cs.

6.47.2.7 Get1000EmGlyphWidth() [2/2]

```
double VectSharp.TrueTypeFile.Get1000EmGlyphWidth ( int \ glyphIndex \ )
```

Computes the advance width of a glyph, in thousandths of em unit.

Parameters

ex The index of the glyph whose advance width is to be	e computed.
--	-------------

Returns

The advance width of the glyph in thousandths of em unit.

Definition at line 2050 of file TrueType.cs.

6.47.2.8 Get1000EmXMax()

```
double VectSharp.TrueTypeFile.Get1000EmXMax ( )
```

Computes the maximum distance to the right of the glyph origin of the font, in thousandths of em unit.

Returns

The maximum distance to the right of the glyph origin of the font in thousandths of em unit.

Definition at line 2098 of file TrueType.cs.

6.47.2.9 Get1000EmXMin()

```
double VectSharp.TrueTypeFile.Get1000EmXMin ( )
```

Computes the maximum distance to the left of the glyph origin of the font, in thousandths of em unit.

Returns

The maximum distance to the left of the glyph origin of the font in thousandths of em unit.

Definition at line 2107 of file TrueType.cs.

6.47.2.10 Get1000EmYMax()

```
double VectSharp.TrueTypeFile.Get1000EmYMax ( )
```

Computes the maximum height over the baseline of the font, in thousandths of em unit.

Returns

The maximum height over the baseline of the font in thousandths of em unit.

Definition at line 2080 of file TrueType.cs.

6.47.2.11 Get1000EmYMin()

```
double VectSharp.TrueTypeFile.Get1000EmYMin ( )
```

Computes the maximum depth below the baseline of the font, in thousandths of em unit.

Returns

The maximum depth below the baseline of the font in thousandths of em unit.

Definition at line 2089 of file TrueType.cs.

6.47.2.12 GetFirstCharIndex()

```
ushort VectSharp.TrueTypeFile.GetFirstCharIndex ( )
```

Returns the index of the first character glyph represented by the font.

Returns

The index of the first character glyph represented by the font.

Definition at line 1870 of file TrueType.cs.

6.47.2.13 GetFontFamilyName()

```
string VectSharp.TrueTypeFile.GetFontFamilyName ( )
```

Obtains the font family name from the TrueType file.

Returns

The font family name, if available; null otherwise.

Definition at line 1823 of file TrueType.cs.

6.47.2.14 GetFontName()

```
string VectSharp.TrueTypeFile.GetFontName ( )
```

Obtains the PostScript font name from the TrueType file.

Returns

The PostScript font name, if available; null otherwise.

Definition at line 1851 of file TrueType.cs.

6.47.2.15 GetGlyphIndex()

Determines the index of the glyph corresponding to a certain character.

Parameters

glyph	The character whose glyph is sought.
-------	--------------------------------------

Returns

The index of the glyph in the TrueType file.

Definition at line 1960 of file TrueType.cs.

6.47.2.16 GetGlyphPath() [1/2]

Get the path that describes the shape of a glyph.

Parameters

glyph	The glyph whose path is sought.
size	The font size to be used for the font coordinates.

Returns

An array of contours, each of which is itself an array of TrueType points.

Definition at line 2022 of file TrueType.cs.

6.47.2.17 GetGlyphPath() [2/2]

Get the path that describes the shape of a glyph.

Parameters

glyphIndex	The index of the glyph whose path is sought.	
size	The font size to be used for the font coordinates.	

Returns

An array of contours, each of which is itself an array of TrueType points.

Definition at line 2011 of file TrueType.cs.

6.47.2.18 GetLastCharIndex()

```
ushort VectSharp.TrueTypeFile.GetLastCharIndex ( )
```

Returns the index of the last character glyph represented by the font.

Returns

The index of the last character glyph represented by the font.

Definition at line 1881 of file TrueType.cs.

6.47.2.19 IsBold()

```
bool VectSharp.TrueTypeFile.IsBold ( )
```

Determines whether the typeface is Bold or not.

Returns

A bool indicating whether the typeface is Bold or not

Definition at line 1915 of file TrueType.cs.

6.47.2.20 IsFixedPitch()

```
bool VectSharp.TrueTypeFile.IsFixedPitch ( )
```

Determines whether the typeface is fixed-pitch (aka monospaces) or not.

Returns

A bool indicating whether the typeface is fixed-pitch (aka monospaces) or not.

Definition at line 1926 of file TrueType.cs.

6.47.2.21 Isltalic()

```
bool VectSharp.TrueTypeFile.IsItalic ( )
```

Determines whether the typeface is Italic or Oblique or not.

Returns

A bool indicating whether the typeface is Italic or Oblique or not.

Definition at line 1893 of file TrueType.cs.

6.47.2.22 IsOblique()

```
bool VectSharp.TrueTypeFile.IsOblique ( )
```

Determines whether the typeface is Oblique or not.

Returns

A bool indicating whether the typeface is Oblique or not.

Definition at line 1904 of file TrueType.cs.

6.47.2.23 IsScript()

```
bool VectSharp.TrueTypeFile.IsScript ( )
```

Determines whether the typeface is a script typeface or not.

Returns

A bool indicating whether the typeface is a script typeface or not.

Definition at line 1948 of file TrueType.cs.

6.47.2.24 IsSerif()

```
bool VectSharp.TrueTypeFile.IsSerif ( )
```

Determines whether the typeface is serifed or not.

Returns

A bool indicating whether the typeface is serifed or not.

Definition at line 1937 of file TrueType.cs.

6.47.2.25 SubsetFont()

```
TrueTypeFile VectSharp.TrueTypeFile.SubsetFont (
    string charactersToInclude,
    bool consolidateAt32 = false,
    Dictionary< char, char > outputEncoding = null )
```

Create a subset of the TrueType file, containing only the glyphs for the specified characters.

Parameters

charactersToInclude	A string containing the characters for which the glyphs should be included.	
consolidateAt32	If true, the character map is rearranged so that the included glyphs start at the unicode U+0032 control point.	
outputEncoding	If <i>consolidateAt32</i> is true, entries will be added to this dictionary mapping the original characters to the new map (that starts at U+0033).	

Returns

Definition at line 544 of file TrueType.cs.

6.47.3 Property Documentation

6.47.3.1 FontStream

```
Stream VectSharp.TrueTypeFile.FontStream [get]
```

A stream pointing to the TrueType file source (either on disk or in memory). Never dispose this stream directly; if you really need to, call Destroy instead.

Definition at line 46 of file TrueType.cs.

The documentation for this class was generated from the following file:

VectSharp/TrueType.cs

6.48 VectSharp.TrueTypeFile.TrueTypePoint Struct Reference

Represents a point in a TrueType path description.

Public Attributes

double X

The horizontal coordinate of the point.

double Y

The vertical coordinate of the point.

• bool IsOnCurve

Whether the point is a point on the curve, or a control point of a quadratic Bezier curve.

6.48.1 Detailed Description

Represents a point in a TrueType path description.

Definition at line 1337 of file TrueType.cs.

6.48.2 Member Data Documentation

6.48.2.1 IsOnCurve

 $\verb|bool VectSharp.TrueTypeFile.TrueTypePoint.IsOnCurve|\\$

Whether the point is a point on the curve, or a control point of a quadratic Bezier curve.

Definition at line 1352 of file TrueType.cs.

6.48.2.2 X

double VectSharp.TrueTypeFile.TrueTypePoint.X

The horizontal coordinate of the point.

Definition at line 1342 of file TrueType.cs.

6.48.2.3 Y

double VectSharp.TrueTypeFile.TrueTypePoint.Y

The vertical coordinate of the point.

Definition at line 1347 of file TrueType.cs.

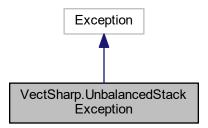

The documentation for this struct was generated from the following file:

VectSharp/TrueType.cs

6.49 VectSharp.UnbalancedStackException Class Reference

The exception that is thrown when an unbalanced graphics state stack occurs.

Inheritance diagram for VectSharp.UnbalancedStackException:

6.49.1 Detailed Description

The exception that is thrown when an unbalanced graphics state stack occurs.

Definition at line 2313 of file Graphics.cs.

The documentation for this class was generated from the following file:

VectSharp/Graphics.cs

6.50 VectSharp.TrueTypeFile.VerticalMetrics Struct Reference

Represents the maximum height above and depth below the baseline of a glyph.

Public Attributes

• int YMin

The maximum depth below the baseline of the glyph.

• int YMax

The maximum height above the baseline of the glyph.

6.50.1 Detailed Description

Represents the maximum height above and depth below the baseline of a glyph.

Definition at line 2170 of file TrueType.cs.

6.50.2 Member Data Documentation

6.50.2.1 YMax

 $\verb|int VectSharp.TrueTypeFile.VerticalMetrics.YMax|\\$

The maximum height above the baseline of the glyph.

Definition at line 2180 of file TrueType.cs.

6.50.2.2 YMin

 $\verb|int VectSharp.TrueTypeFile.VerticalMetrics.YMin|\\$

The maximum depth below the baseline of the glyph.

Definition at line 2175 of file TrueType.cs.

The documentation for this struct was generated from the following file:
